A. Perform all masonry work with skilled workmen under adequate supervision to assure that the requirements of Chapter 4 of the referenced NCMA specifications are met. Erect all masonry true to lines and levels with joints of uniform thicknesses, all surfaces true, and corners straight and plumb. Lay exposed-to-view masonry block units with an individual unit-to-unit level tolerance not exceeding 1/8 inch and an overall tolerance from true level not exceeding 1/4 inch in 10 feet in any direction. Do not lay any unit having chipped edges or face in exposed-to-view locations. Remove any such unit, if installed, and replace with a new undamaged unit.

B. Perform all cutting of masonry, using power saw with carbide-tipped blade.

C. Examine all Drawings as requirements for the accommodation of work of other trades and Contractors in new masonry, and provide all required recessed, chases, slots, cut-outs and built-in items, for the accommodation of bearing plates and set loose lintels, place anchors, bolts, sleeves, and other items occurring in the masonry work. Every precaution should be taken to minimize future cutting and patching.

D. Protect all masonry from rain prior to, and during, the installation thereof. If the temperature is in excess of 80 degrees F. at time of installation, lightly moisten contact surfaces of masonry units by brushing with water.

E. Lay all masonry in full mortar beds, and completely butter vertical edges with mortar.

F. All masonry shall have a low rate of suction at the time they are placed in the work; to secure this low rate of suction, the masonry shall be thoroughly wetted and not allowed to dry out. The suction of the masonry shall be so reduced that specimen of masonry taken from the scaffold shall not gain more than 0.7 of an ounce (20 grams) in weight when placed in 1/8 to 1/4 inch of water for one minute.

G. Fit masonry into bucks and frames so as not to distort alignment of such items, and fill backs of such items with mortar. Carefully point around all metal frames with mortar, except where joints are specified to receive caulking and sealant, in which case rake joints to a uniform depth of 3/4 inch for proper installation of caulking and sealant materials.

H. All masonry to be used as permanent forms for grout or cast-in-place concrete shall be adequately supported to resist gravity loads and lateral pressures imposed on it during grout or concrete placement and curing.

I. Build in all lintels, sleeves, and anchors as the work progresses.

3.02 MORTAR MIXES

A. General - In proportioning volumetric mixtures, one 94-pound sack of Portland cement and one 50-pound sack of hydrated lime each shall be assumed to constitute a nominal one cubic foot. Do not measure by shovel. Use known measurements. Mix materials in a clean mechanical batch mixer.

1. After the Architect has approved the mortar mix color, mix together a sufficient quantity of materials for the entire project without the use of water. Mix entire quantity of dry materials and combine with water only in quantities that shall be used before hardening.

B. Colored Mortar: Produce mortar of color required by use of selected ingredients. Do not adjust proportions without Architect's approval.

1. Color Pigmented Mortar: Where colored mortar pigments are required do not exceed pigment-to-cement ration of 1-to-10, by weight.

C. Do not use admixtures of any kind in mortar, unless otherwise indicated.

D. Mixes:

1. Mix for masonry exterior veneer (Type N-750 PSI) - One part Portland Cement, one part lime, six (6) parts sand, by volume.
2. Mix for exterior masonry veneer back up and bearing walls (Type S-1800 PSI) - One part Portland Cement, one-half part lime, four parts sand, by volume.
3. For reinforced masonry use Type S mortar, minimum 1800 psi at 28 days. Mortar proportions by volume shall be one part Portland Cement; over ¼ to ½ part hydrated lime; and not less than 2-1/4 and not more than 3 times the sum of the volumes of cement and lime shall be aggregate.

E. Mortar Preparation

1. Mixing the lime, cement and sand shall be carefully measured and well mixed together dry. The minimum amount of water necessary to produce a workable mix shall be used.

F. No pre-bagged mixes are allowed.

3.03 REINFORCEMENT AND ANCHORAGE

A. Install horizontal and vertical reinforcing for the following conditions:

1. All exterior concrete masonry walls.
2. All interior concrete masonry walls which enclose stairwells and elevator shafts.
3. All other concrete masonry walls as shown on the drawings.
4. Refer to structural drawings for other requirements.

B. Install specified continuous reinforcement in all masonry walls and partitions, spacing the reinforcing not more than 16 inches on center (8 inches where indicated on the drawings), vertical dimension, commencing one course above supporting concrete slabs or walls as applicable. Install additional reinforcement over all exterior and interior openings in first joint above opening unless otherwise shown on the Drawings and extending 24 inches minimum beyond each side of opening. Lap all reinforcement 8 inches minimum. Install preformed reinforcement ladder units at intersections of all masonry walls and partitions and wherever walls and partitions change directions.

C. Install specified anchors, for ends of masonry to concrete, masonry backed by concrete, and masonry to column surfaces, spacing the anchors not more than 16 inches on center, vertically. Provide written instructions for proper spacing of anchors on steel columns and beams to structural steel fabricator when furnishing the anchors for shop-welding to the columns. Coordinate placement of dovetail anchor slots ensuring that such slots are properly located and securely installed in the forms under the work of SECTION 033000-CAST-IN-PLACE CONCRETE, before the concrete is poured.

D. Install veneer ties for exterior and interior face brick and CMU veneer at metal stud back up at 16 inches on center vertically and 16 inches on center horizontally. Secure anchors through rigid insulation and gypsum sheathing into metal studs according to manufacturer's recommendations. Dab mastic or caulk on heads of screws.

3.04 GROUT

A. Fill solid only the voids of concrete masonry units which are to receive vertical reinforcing unless noted otherwise on the Drawings. Grout shall have a minimum compressive strength of 3000 psi after 28 days.

B. Provide grout with a slump of 8 to 11 inches as measured according to ASTM C-143.

C. Refer to structural drawings for other requirements.

3.05 BONDS AND JOINT TREATMENTS

A. Bonds (unless otherwise shown on the drawings):

1. Exterior brick veneer – Running bond (Refer to Drawings).
2. Concrete masonry units – Running bond.
3 GL-CMU – Running bond (Refer to Drawings).

B. Joints:

1. Mortar joints for face brick and masonry shall be concave joints.

2. Control joints, and other vertical joints indicated on the Drawings to have compressible filler – Terminate all reinforcing at each side of joint.

   Install compressible filler against one side of joint, securing in place with spots of specified insulation adhesive, and maintaining outer edge of filler back 3/4 inch to receive sealant and bead back-up. Erect masonry of abutting wall with compression against filler to achieve a uniform joint width for full height of wall. Unless otherwise shown on the Drawings, spacing of control joints in exterior masonry veneer shall not exceed thirty (30) feet on center.

3. Joints at tops of interior masonry partitions – Install compressible filler between top of partition and underside of deck or structural member above, keeping edges of filler back 1/2 inch from each face of partition.

4. Joints of all exposed-to-view CMU – Not designated to have compressible filler inserted therein - Fill with mortar, strike off flush, and tool to smooth and dense surface, using a concave joint tool.

5. Concealed-from-view joints of masonry – Fill with mortar and strike off flush and tool to smooth and dense surface using concave joint.

6. All head joints and bed joints in both face CMU and back-up work shall be completely filled with mortar. No slushing shall be allowed.

C. Precast concrete joints:

1. All precast concrete units shall be set by experienced masons, accurately and in accordance with the shop and setting drawings. Unless otherwise noted, every unit shall be set in a full bed of mortar with all vertical joints flushed full. All anchors and dowels shall be firmly placed and all anchor holes and dowel holes and similar holes filled completely with mortar.

2. When setting with mortar, all units not thoroughly wet shall be drenched with clear water prior to setting.

3. After each unit has been set, all joints shall be raked to a depth of 3/4" from the face for pointing. The face of each unit shall then be sponged off to remove any splashed mortar or mortar smears.

4. Only the ends of lugged sills shall be embedded in mortar. The balance of joint shall be left open until pointing of precast work, then tuck pointed in face only to a depth of ¾ inches.

5. Apply sealant and caulking material in joint using a hand caulking gun or power gun with a gun nozzle of proper size and sufficient pressure to completely fill joints. The depth of sealant and caulking materials shall be in accordance with the recommendations of the materials manufacturer for the specific joint function but in no case shall exceed 5/8 inch depth, not be less than 1/4 inch wide, regardless of the width of the joints. Tool with a dry tool only. Do not use detergents or soapy water for tooling operations. Joints shall be given a slight concave surface. Remove masking tape immediately after tooling and/or before sealant and caulking material has taken initial set.

   a. Do not apply materials when temperatures are below 40 ^{o}F without prior approval of the Architect.

b. Primer, if used, shall be maintained within the joint area and not allowed to over-lap on adjacent surfaces.

c. Before sealant has cured, finish surface with sand mixture to match mortar appearance. Sand shall be worked into surface of uncured sealant.

3.06 WALL AND PARTITION CONSTRUCTION

A. General:

1. Build the walls and partitions in the various combinations and thicknesses as indicated on the Drawings and as herein specified.

2. Build in continuous reinforcement, vertical reinforcing rods, anchorage items, and loose lintels, as the work progresses.

3. Fill cells of masonry units with mortar wherever anchors, grout and reinforcing rods are to be installed therein. Fill pressed metal frames, occurring in masonry, with mortar, as the masonry is erected. Fill cores of masonry units in other locations where so indicated on the Drawings.

4. Refer to the Drawings for locations and partitions and walls where surfaces of masonry units will be exposed to view. Take special care in laying up such partitions and walls to assure that specified face tolerances are met.

5. Lightly stone all concrete masonry units, after erection, to remove all projections and loose mortar, and follow up with dry brushing.

B. Exterior Walls:

1. Insulation shall be installed in strict accordance with manufacturer's recommendations. Joint tape and adhesive shall be compatible with the air and vapor barrier.

2. Provide weep holes in mortar joints of exterior masonry veneer spaced 32 inches on centers, wherever through-wall flashing occurs. Install mortar netting, membrane and metal drip in accordance with manufacture recommendations.

3. Membrane Flashing, Installation:

a. All surfaces receiving through-wall flashing shall be thoroughly dry, free from loose material and reasonably smooth. There shall be no slopes that form pockets or prevent free drainage of water to the exterior.

b. Install self-adhering membrane flashing in strict conformance with the manufacturer's instructions.

c. Flashing shall be carried through or up the walls, as indicated on the Drawings. Flashing shall extend up the wall construction, behind the cavity insulation, a minimum of 8 inches and beyond each side of openings and turned up at the sides a minimum of 8 inches, forming a pan. Extend outer edges of flashing 1/4 inch beyond the face of walls and turn down exposed flashing. Seal the upper edge to the air and moisture barrier furnished and installed by SECTION 071326-AIR AND VAPOR BARRIER.

d. Where membrane through-wall flashing is in combination with solid metal flashing, membrane flashing shall be placed over the metal flashing.

4. In general, erect the lowest course of face masonry up to top of foundation walls before commencing installation of back-up units.

5. Lay first course of back-up masonry units on a smooth bed of mortar, after supporting slab has been cleaned. Fill cells of first course with mortar to full height of the masonry unit.

6. Erect two courses of back-up units, installing continuous reinforcing therein, before commencing installation of insulation and face masonry. Strike off all excess mortar from faces as the work progresses.

7. At cavity walls, keep the space between wythes clear of all mortar drippings by catching them on metal or wood strips. Place wood strips temporarily on the continuous reinforcing, or anchors, as applicable, and then pull up and clear off the accumulated drippings before placing the next layer of reinforcing or row of anchors, as applicable.

8. Repeat procedures specified in subparagraphs 4, 5, 6, and 7 for full height of exterior walls, except where differing condition is indicated on the Drawings.

C. Interior Partitions:

1. Refer to the Drawings for the various partition conditions.

2. Erect partitions in accordance with the requirements specified under Article 3.03, installing continuous reinforcement 16 inches on center, vertical dimensions, and using the bond and joint treatments specified herein before. Install all specified types of anchors at a spacing not to exceed 16 inches on centers, vertical dimension, and 24 inches on center, horizontal dimension.

3.07 STONE VENEER INSTALLATION

A. Prepare for Installation Over Concrete Masonry Units: Ensure concrete masonry unit wall assembly is sound, without defects, and properly cured to accept adhered masonry veneer setting material.

1. Examine and remove contaminants including dirt, dust, stains, paint, organic matter, form-release agents, and other substances that may inhibit mortar bond.

2. Mortar: ANSI A118.4 or ANSI A118.15 to adhere stone to concrete masonry unit wall assembly

B. Install natural thin veneer stone and mortar in accordance with manufacturer's instructions and ACI 530.1/ASCE 6/TMS 602.

C. Sort and install irregularly shaped stones to form a tight web of interlocking pieces with a maximum grout joint width of 3/8 inch. Corners shall be installed to form the appearance of a solid stone wall, alternating between small and large stones on front and side faces of the wall.

D. Cleaning:

1. Keep face of stone free of mortar as work progresses.
2. If residual mortar is on face of stone, allow to dry partially and brush mortar off surface and sponge off residue.
3. When work is completed and mortar has set for two to three days, clean surface from top to bottom using mild masonry detergent acceptable to stone manufacturer. Do not use harsh cleaning chemicals or methods that could damage stone. Do not use metal brushes or acids for cleaning.

E. Protect installed natural stone veneer to ensure that except for natural weathering, stone will be without damage or deterioration at time of Substantial Completion.

3.08 CLEANING AND POINTING OF MASONRY

A. During the progress of the work, keep the exposed surfaces of masonry clean at all times and protected against damage. Upon completion of masonry and adjoining work likely to damage the masonry, and when directed by the Architect, clean the exposed surfaces thoroughly using bristle brushes and sufficient amounts of fresh and clean water. Wire brushes shall not be used. Cleaning compounds, soaps, detergents, and acids may be used only when specifically approved and as directed by the Architect. All cleaning operations shall proceed from the top down.

1. Face Brick – Perform final cleaning with special detergents and water, and if they fail to completely remove grouting or mortar stains, use a solutions and stiff bristle brushes to remove residual stains. Brick shall be thoroughly saturated prior to applying the acid solution, and the brushes washed and solution changed frequently to avoid transferring the stains to other locations. Work shall proceed from top downward and thoroughly rinsed off with clean water as each section is cleaned. The masonry subcontractor shall be responsible for any damages to this or other work caused by the cleaning process.
2. Concrete Masonry Units – Perform final cleaning by scrubbing with a stiff bristle fiber brush and mild detergent with water. Rinse all surfaces thoroughly with clean water.

B. As the cleaning progresses, examine all face joints in exposed masonry to locate cracks, holes, or other defects and point up all such defects and fill with mortar. Where necessary, in the opinion of the Architect, cut out defective joints and masonry units and replace with new materials, exercising extreme care to match original work.

C. Foregoing shall be in addition to, and not in lieu of, any specific requirements for cleaning of masonry as specified hereinafter under different paragraphs.

3.09 FIELD QUALITY CONTROL

A. Owner will engage a qualified independent testing agency to perform field quality control testing indicated below.

1. Owner will make payment for these services.
2. Retesting of materials failing to meet specified requirements shall be performed at Sub-Contractor's expense.

B. Testing Frequency: Tests and evaluations listed in this Article will be performed during construction for each 5,000 sq. ft. of wall area or portion thereof.

C. Mortar properties shall be tested per ASTM C780.

D. Grout will be sampled and tested for compressive strength per ASTM C1019.

E. Concrete Block Tests: For each type of concrete masonry unit indicated, units will be tested according to ASTM C140.

END OF SECTION

Division 5
Metals

SECTION 050001

MISCELLANEOUS AND ORNAMENTAL IRON

*(Filed Sub-Bid Required)

PART 1 GENERAL

1.00 TIME, MANNER AND REQUIREMENTS FOR SUBMITTING SUB-BIDS

A. Sub-bids shall be submitted in accordance with provisions of the General Laws (Ter. Ed.), Chapter 149, Section 44A to 44L, inclusive, as amended. The time and place for submission to Sub-Bids shall be set forth under INSTRUCTIONS TO BIDDERS.

B. Each Sub-Bid filed with the Awarding Authority must be accompanied by BID BOND, or CERTIFIED CHECK, or a TREASURER'S CHECK or CASHIER'S CHECK issued by a responsible bank or trust company, payable to the **City of Amesbury** in the amount stipulated in the INSTRUCTIONS TO BIDDERS. A Sub-Bid accompanied by any other form of bid deposit than those specified will be rejected.

C. Each Sub-Bid submitted for the work, under this SECTION, shall be on a form furnished by the Awarding Authority, and required by SECTION 44F of Chapter 149 of the General Laws, as amended.

D. Work to be performed under this SECTION is shown on Contract Drawings numbered:

G.0.01, G.0.02, G.0.04-G.0.08, inclusive; 1.1.01-1.1.14, inclusive; 1.5.01-1.5.06, inclusive; 2.1.00-2.8.03, inclusive; 3.4.01-3.9.15, inclusive; 4.1.01-5.2.07, inclusive; 5.4.01-5.4.11, inclusive; 5.6.01-5.6.13, inclusive; and 6.1.00-6.1.03, inclusive.

Remaining Contract Drawings are included for reference and coordination.

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a sub-bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish and install the following, as shown on the Drawings and specified herein:

1. Interior steel stairs, intermediate landings and landing support structure. Fabricated steel posts in conjunction with “low height” metal stud partitions and millwork and lockers at project areas and Pre-K and Kindergarten and other classrooms as shown on the Drawings.

   a. Stainless steel stair railing/guardrail system, including but not limited to stainless steel flat stock, stainless steel infill wire panels with perimeter stainless steel and mounting brackets, stainless steel wall railings with stainless steel mounting supports and prefabricated rail supports. Stringers at Stairs A, B and C: primed HSS steel tubes.

   b. Stainless steel ramp and wall railings at cafeteria platform.

   c. Galvanized roof access stair including but not limited to: channels, bar grate, checker plate nosing, pipe and flat stock bar.

2. Interior steel ladder at elevator pit and bar grate cover for elevator sump.

3. ~~Stainless~~ Steel seismic clip angles at top of masonry partitions.

4. Galvanized steel access ladder and railings, roof access pipe rail and roof railing.

5. Steel pipe support system for swing at ceiling in PT and Rise Motor Room.

6. Steel bench brackets and legs at underside of Stair A.

7. Galvanized steel stair tread nosings.

8. Exterior galvanized and stainless steel railings and guardrails throughout the site.

~~9. Skateboard deterrents~~

9. All other items designated “SECTION 050001” “MISCELLANEOUS AND ORNAMENTAL IRON” or “MISCELLANEOUS IRON” on the Drawings.

B. The work of SECTION 055000-MISCELLANEOUS METALS shall be included in the sub bid for this SECTION.

C. Perform all shop painting and touch up after erection, as specified hereunder.

D. Furnish the following, for installation under the designated SECTIONS.

1. Anchor bolts, inserts and sleeves, required to attach miscellaneous iron items to concrete and masonry: SECTION 033000-CAST-IN-PLACE CONCRETE and SECTION 040001-MASONRY.

E. Unless otherwise noted on the Drawings or specified herein, all exposed steel that is not painted or protected by cladding, shall be hot dip galvanized, including all fasteners.

F. This subcontractor shall furnish, install and maintain in a safe, adequate condition all lifts, hoisting, staging and scaffolding that are necessary for the proper execution of the work of this SECTION.

G. LEEDv4-S Requirements:

1. The work of this section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEEDv4-S Certification at "Silver" Level is an Owner Requirement that is critical to secure project funding from the Massachusetts School Building Authority. LEEDv4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.
2. For all paints and coatings, meet the LEED-S requirements for IEQ Credit 2, Low-Emitting Materials and as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
3. Meet the LEEDv4-S requirements for MR Credit 2, Building Product Disclosure and Optimization – Environmental Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers' product documentation for each product having an Environmental Product Declaration (EPD).

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be performed under the designated SECTIONS:

1. Exterior metal fencing: SECTION 323100-FENCING.
2. Break metal angles and other fasteners at interior millwork: SECTION 062000-FINISH CARPENTRY.
3. Steel angles, clips and plates at windows, storefronts and curtainwalls: SECTION 080001-METAL WINDOWS.
4. Free-standing exterior signs: SECTION 101453-TRAFFIC SIGNAGE.
5. Vehicle gates: SECTION 323100-FENCING
6. Decorative site bollards: SECTION 323000-MISCELLANEOUS SITE IMPROVEMENTS.

1.04 STRUCTURAL REQUIREMENTS (MASS BUILDING CODE)

A. Metal stair assembly shall carry a minimum uniform live load of 100 pounds per square foot of projected plan area, or a minimum concentrated load of 300 pounds on an area of 4 square inches applied at the center of any tread span, whichever produces the greater stresses. Limit deflection of treads, platform, and framing members to L/360.

B. Handrails, guards, railings and barriers around stairways, stairwells, balconies, and other floor openings, both exterior and interior, including frameless glass railing systems, shall be designed to resist a concentrated load of at least two hundred (200) pounds applied in any direction at any point of the top rail, and they shall also be designed for a uniformly distributed load of fifty (50) pounds per linear foot applied in any direction at any point at the top rail. These loads need not be assumed to act concurrently.

C. Intermediate rails (all rails except hand rail), balusters and panel fillers shall be designed to withstand a horizontally applied normal load of 50 pounds on an area equal to 1 square foot including openings and space between rails. Reactions due to this load are not required to be superimposed with those indicated above.

1.05 SUBMITTALS

A. Submit the complete shop drawings in accordance with the requirements of SECTION 013300 – SUBMITTALS.

B. Include large-scale plans, elevations and details of items specified herein, showing proposed methods of anchorage to surrounding structure.

C. Include with shop drawings all engineering calculations for all items specified herein and their connections furnished under this Section, **prepared and stamped by a Structural Engineer registered in the Commonwealth of Massachusetts**.

D. Each field piece shall be marked plainly with suitable erection marks, which shall also be shown on the shop drawings.

E. Submit notarized certificate of compliance from the galvanizer, stating requirements for galvanizing specified herein have been met.

F. Certification - Prior to commencing installation of materials required hereunder, furnish the Architect with certification that requirements pertaining to shop painting have been performed in the manner specified.

G. Thermal Movements: Provide exterior metal fabrications that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.

H. Structural Performance of Ladders: Provide ladders capable of withstanding the effects of loads and stresses within limits and under conditions specified in ANSI A14.3

I. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.

J. LEED for Schools submittal requirements:

1. Relevant supporting documentation by LEED for Schools v4 and as detailed in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
2. A completed LEED MATERIALS REPORTING FORM, per SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

1.06 JOB CONDITIONS

A. Be responsible for location and levels of all work of this SECTION, except such parts as may be delivered to others and set by them. In such cases assist them in properly locating said parts.

B. Furnish anchorage items and other items required to be built into the concrete or masonry to the job at the proper time and include instructions and/or templates for their installation.

1.07 QUALITY ASSURANCE

A. Engineering Responsibility: Preparation of Shop Drawings, design calculations, and other structural data by a qualified professional engineer.

1. The engineer shall make two visits to the site (once during installation and once after completion of the work) to inspect their respective components for conformance with the shop drawings.

B. Engineer Qualifications: A structural engineer who is registered in the Commonwealth of Massachusetts and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of metal fabrications that are similar to those indicated for this Project in material, design, and extent.

C. NAAMM Stair Standard: Comply with "Recommended Voluntary Minimum Standards for Fixed Metal Stairs" in NAAMM AMP 510, "Metal Stairs Manual," for class of stair designated, unless more stringent requirements are indicated. 1. Preassembled Stairs: Commercial class. 2. Ornamental Stairs: Architectural class.

D. NAAMM Railing Standard: Reference NAAMM AMP-521, "Pipe Railing Systems Manual" for design of railings.

E. Welding: Qualify procedures and personnel according to the following:

1. AWS D1.1, "Structural Welding Code--Steel."
2. AWS D1.6, "Structural Welding Code--Stainless Steel."

PART 2 PRODUCTS

2.00 LEEDv4-S REQUIREMENTS

A. Products and materials used for this section of the work are required to meet the following criteria for LEEDv4-S materials Credits, and a completed LEEDv4-S Materials Reporting Form shall be submitted for all materials in this SECTION:

1. Recycled Content. (See Section 018113 Sustainable Design Requirements for overall project recycled content requirements.) Steel shall be produced using an average minimum 65% recycled materials.
2. Regional Content. (See Section 018113 Sustainable Design Requirements for overall project regional content requirements.) Steel shall be fabricated within 500 miles of the project site.
3. IEQ Credit 2, Low-Emitting Materials: meet the requirements for IEQ Credit 2 and as defined in of SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

2.01 METALS AND METAL TREATMENTS

A. General

1. Standard products meeting the detailed requirements of the miscellaneous and ornamental iron items required hereunder will be considered for approval by the Architect.
2. Provide all supplemental parts necessary to complete each miscellaneous metal item whether or not such parts are shown and specified. Provide all anchorage for securing the work required hereunder.
3. Provide only new metals, free from defects impairing strength, durability, and of the commercial quality specified.
4. Curved work shall be true to radii, with smooth finished surfaces unless otherwise specified.
5. Provide fastenings of the same material, color and finish, as the metal to which applied unless otherwise noted.

B. Steel shapes, plates, and bars - Conforming to the requirements of Standard Specifications for Steel for Bridges and Buildings, ASTM Designation A 36.

1. Minimum 3/8 inches thick full depth fitted stiffener plates shall be provide in the webs of all channel stringers to align with railing posts above.

C. Steel pipe – ASTM A53 schedule 40 or stronger, seamless steel, of the sizes indicated on the Drawings, galvanized when used on exterior, of sufficient strength to meet the structural requirements of this SECTION.

1. Stainless steel pipe and fittings shall be Schedule 40 (Schedule 80 at PT swing), type 304, ornamental grade with a No. 4 satin finish.

2. Stainless steel wire cable shall be minimum 9 gauge.

D. Pipe sleeves - Hot-dipped galvanized steel, having inside dimension of 1/4 inch greater than outside diameter of post to be inserted therein.

E. Hydraulic cement, for installing bolts and fastenings into masonry and concrete - Quick setting, non-staining type.

F. Bolts, nuts, and washers for field or shop connections - Galvanized, to comply with ASTM B 633, Class Fe/Zn 5, nuts re-tapped to fit, for all galvanized structural steel elements.

G. Guard infill mesh panels – "Aura 8155 Designer Mesh", by McNichols. Similar products made of stainless steel wire by Balco, Inc.; P&P Artec or others will be considered for approval by the Architect upon receipt of adequate product data and samples.

1. Material: Stainless steel type 316,

2. Weave type: Rigid cable style weave, 62% open

3. Component wire: .120 in. (8 ga) warp wire at .283 in. on center and .092 in. (11ga) weft wire at 2.87 in. on center.

H. Bar Grating – To establish a standard of quality, design and function, bar grating shall be as manufactured by McNichols, Tampa, FL. Similar products by FS Industries, Nucor Grating or others will be considered for approval by the Architect upon receipt of adequate product data and samples.

1. Material: Galvanized steel, smooth surface, 11W4 welded bar grating with 3/16 inch rectangular bearing bars spaced 11/16 inch between centers with cross bar at 4 inches and ½ inch clear openings. Bars shall be 1 inch in height.

2. Grating shall comply with IBC 1011.7.1 Stairway Walking Surface, Exception 1.

3. Openings shall be placed so that the long dimension is perpendicular to the path of travel.

4. Accessories:

   a. Checker plate nosing

   b. 3-inch toe kick welded to tread / landing

I. Prefabricated Handrail Bar Brackets: To establish a standard of quality, design and function, bar brackets shall be as manufactured by Wagner Industries, Milwaukee, WI. Similar product by others will be considered for approval by the Architect upon receipt of adequate product data and samples.

1. Handrail bar brackets shall consist of bracket saddle, bracket arm and 3-inch bracket base.
2. Brackets shall be fabricated of the same material as the supported handrail.
3. Brackets shall be equal to Wagner RB1503.4 stainless steel at all locations except Stair D, where they shall be Wagner RB14030 with galvanized finish.
4. No snap-on cover shall be provided at any location.

J. Galvanizing - All metal fabrications indicated to be galvanized on the Drawings or specified hereunder to be galvanized, shall conform to the requirements of the latest edition of the following ASTM Reference Standards: A123, A153, A143, A384, A385 and A780. Fabricated steel shall be galvanized by the hot-dip process conforming to the requirements of ASTM A123, latest edition with the addition of .05 to .09 percent nickel and other earthly materials to the galvanizing kettle forming an alloy, DELTAGALV by Duncan Galvanizing or an approved equal meeting all requirements of this specification. Provide thickness of galvanizing specified in referenced standards. To prevent flux inclusions and entrapment, the steel shall be immersed in a bath of zinc ammonium chloride prior to galvanizing. The use of the wet kettle process shall be prohibited.

Wherever possible, perform galvanizing after assembly of items. Only where items are too large for galvanizing tanks will galvanizing before assembly be acceptable. Each galvanized piece shall bear the stamp of the galvanizing processing firm indicating the ASTM Specification Number and the weight of the nickel zinc coating per square foot.

K. Shop priming paint for non-galvanized steel (Grey) - Tnemec 37 H-78 high solids, Benjamin Moore SuperSpec HP (P06) Alkyd Metal Primer, PPG Pit Tech Plus, or an approved equal.

L. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

M. Brackets, Flanges and Anchors: Cast or formed metal of the same type material and finish as supported rails unless otherwise indicated.

N. Non-shrink, Nonmetallic Grout: Factory-packaged, non-staining, noncorrosive, nongaseous grout complying with ASTM C 1107. Provide grout specifically recommended by manufacturer for interior and exterior applications.

O. Expansion bolts shall be Hilti Kwik Bolt TZ Expansion Anchors; Strong Bolt by Simpson Strong Tie; or Wedge Bolt by Powers Fastening Systems or an equal approved by the Architect.

P. Epoxy injection anchor bolts shall be Hilti HIT Adhesive Anchors, ET with Set XP Epoxy Adhesive Anchors by Simpson Strong Tie, PE 1000 Epoxy Adhesive Anchor System by Powers Fastening Systems or an equal approved by the Architect. Use renovation screens when bolting to hollow substrate.

PART 3 EXECUTION

3.01 WORKMANSHIP AND FABRICATION

A. Shop-fabricate items wherever practicable, accurately fitting all parts and making all joints fit tight.

B. Grind all edges of bar and plates completely free from nicks and machine marks, prior to galvanizing and/or shop priming.

C. Make all welds in a continuous manner, using equipment and methods which are recognized to be the best in modern practice. Grind all welds completely smooth and to the surface plane of the base metals. Perform welding work prior to galvanizing in all cases, except where field welding is necessary, in which case completely coat all such welds in a cold liquid galvanizing, Z.R.C., Galvicon, Zirp, or approved equal, after performing grinding operations.

1. Welds in stainless steel handrails, guards and PT swing support system shall be ground and polished to match adjoining material. The satin texture of the final polishing operation shall be uniform and smooth without discoloration.

D. Draw up all threaded connections tightly, after butting same with pipe-joint compound, to exclude water.

E. Use only screws and bolts of sufficient size to assure against loosening from normal usage of miscellaneous metal items furnished hereunder.

F. Wherever the underside of steel pan stair construction is exposed to view, seams shall be either continuously welded or a seam sealer applied before the concrete fill is placed, to eliminate ongoing leaks and streaking on the exposed underside.

3.02 RAILINGS IN PIPE SLEEVES

A. Insert vertical pipe rail members into sleeves, shim with lead wedges, and fill the sleeve with hydraulic cement, level with the surrounding surface. Set sleeves to a depth of six inches, minimum.

B. Handrails – To withstand loads specified in Article 1.04.

3.03 SHOP PAINTING AND TOUCH-UP OF NON-GALVANIZED STEEL

A. Surface preparation of steel – Thoroughly clean all steel of all mill scale pits and blemishes by power wire brushing or sand-blasting. Remove all rust, dirt, weld flux, weld splatter, and other foreign matter by wire brushing or scraping (power wire brushing, if necessary). Grind smooth all projections. Remove oil and grease deposits with solvent.

B. Shop Painting – All non-galvanized steel members shall be painted before shipping. All surfaces shall be painted except surfaces which are to be welded, and surfaces to be encased in masonry. Paint shall be applied thoroughly and evenly on the surfaces and worked in to the joints and other open areas on the surfaces. Primer shall be applied in accordance with coating manufacturer's recommendations to provide a minimum dry film thickness per coat of prime paint 3.0–3.5 mils.

C. Touch-up – After erection, repeat surface preparation of steel at all areas affected by erection. Remove scale, blemishes, dirt, weld flux and weld splatter and other foreign material by wire brushing or scraping. Touch-up all abrasions, scarred areas and field welds with compatible primer meeting requirements of IEQ 4.2.

END OF SECTION

SECTION 051200

STRUCTURAL STEEL FRAMING

PART 1 GENERAL

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. The work of this Section consists of furnishing and erecting all structural steel and Exposed to View Structural Steel (EVSS) as shown on the Drawings and as specified herein and includes, but is not limited to, the following:

1. Leveling plates and anchor rods.
2. Columns with base plates and connections.
3. Beams with connections.
4. Moment Connections
5. Channels, angles, plates, frames, anchors, and other similar pieces.
6. Steel bracing with connections.
7. Shop paint and field touch-up paint after erection.
8. Galvanizing.
9. As-Built column and base plate surveys.
10. Relieving angles and connections.
11. Thermal isolation pads, bushings, and washers.

All structural steel that is exposed in the finish work shall be Exposed to View Structural Steel (EVSS) as noted on the drawings. Coordinate locations of EVSS with Architectural Drawings.

B. LEEDv4-S Requirements:

1. The work of this section includes material and submittal requirements for fulfillment of Project LEED v4-S Certification. LEED v4-S Certification at “Silver” Level is an Owner Requirement that is critical to secure project funding from the Massachusetts School Building Authority. LEED v4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.

2. For all paints and coatings, meet the LEED requirements for IEQ Credit 4.2 and as defined in Subparagraph 2.04 of Section 018113 – SUSTAINABLE DESIGN REQUIREMENTS.

3. For all paints and coatings, submit industry-wide (generic) EPDs or product specific Type III EPDs.

C. Items to Be Furnished Only: Furnish the following items for installation by the designated Sections:

1. Section 033000 - CAST-IN-PLACE CONCRETE: Anchor rods, embedded plates with bolts or anchors, as indicated on the Drawings.

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. Related work shall be performed under the following Sections:

1. Section 033000 CAST-IN-PLACE CONCRETE.
2. Section 040001 MASONRY.
3. Section 050001 MISCELLANEOUS AND ORNAMENTAL IRON.
4. Section 051226 SHEAR CONNECTORS.
5. Section 052100 STEEL JOIST FRAMING.
6. Section 053100 STEEL DECKING.
7. Section 055000 MISCELLANEOUS METALS.
8. Section 090007 PAINTING.
9. Section 071820-SPRAY APPLIED FIREPROOFING

1.04 REFERENCES (LATEST EDITIONS)

A. "Code of Standard Practice for Steel Buildings and Bridges – 2010" and "Specifications for the Design, Fabrication and Erector of Structural Steel Buildings - 2010" by the American Institute of Steel Construction.

B. The "Seismic Provisions for Structural Steel Buildings - 2010" by the American Institute of Steel Construction, Inc.

C. The "Steel Construction Manual" by the American Institute of Steel Construction, Inc.

D. The "Structural Welding Code – Steel - 2010" by the American Welding Society.

E. The "Specifications for Structural Joints Using High Strength Bolts - 2009" by the Research Council on Structural Connections (RCSC).

F. ASTM listed standards by the American Society for Testing and Materials.

G. SSPC listed standards by the Steel Structures Painting Council.

H. In case of conflict between the References and the Project Specification, the Project Specification shall govern. In the case of conflict between References, the more stringent shall govern.

I. When compliance with any such References is specified herein for materials or a manufactured or fabricated product, the Contractor, if requested, shall furnish an affidavit from the manufacturer or fabricator certifying that the materials or product delivered to the job meets the requirements specified. However, such certification shall not relieve the Contractor from the responsibility of complying with any added requirements specified herein.

1.05 SUBMITTALS

A. Submit complete Shop Drawings in accordance with the provisions of SECTION 013300 - SUBMITTALS. One set of printed shop drawings shall be delivered to the Structural Engineer within 24 hours of submitting the electronic version of those shop drawings.

B. Before starting the work of the Shop and Erection Drawings, the steel fabricator shall have their representatives contact the Architect and Structural Engineer to discuss connection details, schedules, shop procedures, materials, and other concerns related to structural steel work.

C. Prior to preparation of Shop Drawings, the fabricator shall submit typical details and calculations of all structural steel and Exposed to View Structural Steel connection types including, but not limited to, moment connections, beam to column and beam to girder connections, truss connections, column splices, beam splices, bracing connections, hanger connections, and other similar details, for approval by the Architect and Structural Engineer. Design of all connections is to be provided by the fabricator, under the supervision of a registered, professional structural engineer, registered in the state of Massachusetts.

D. Prior to submission of Shop Drawings, Contractor shall verify all dimensions, site conditions, and other similar pertinent information relating to existing conditions. Any discrepancies which affect the structural design or details shall be brought to the attention of the Architect and Structural Engineer.

E. No variance from design sizes and details will be permitted on submitted Shop Drawings, but requests for modifications of connection type or details to better suit their shop practice, or for any other reason, will be considered by the Architect and Structural Engineer.

F. Shop Drawings shall include all information required for fabrication of the component parts of the structure. Erection drawings shall clearly indicate all EVSS members. They shall indicate size and weight of members, surface preparation, type and location of shop and field connections, the type, size and extent of all welds. Identify grinding, finish and profile of welds. The welding symbols used on the Shop Drawings shall be as adopted by the American Welding Society. Identify type, size, finish and length of bolts, distinguishing between shop and field bolts. Indicate direction of bolt head orientation at connections for all EVSS members.

G. Approval of Shop Drawings will be for size and arrangement of principal and auxiliary members and for strength of connections. Any errors in dimensions shown on the Shop Drawings shall be the responsibility of the Contractor.

H. Fabrication of any material or performing of any work prior to the final approval of the Shop Drawings shall be entirely at the risk of the Contractor.

I. Certification - Prior to commencing installation of materials required hereunder, furnish the Architect with certification that requirements pertaining to shop painting have been performed in the manner specified.

J. Reproduction of structural plans, sections and details, and any like information by reprographic or electronic methods for use as Shop and Coordination Drawings is subject to the following conditions:

1. The entity producing the Shop and Coordination Drawings (The “User”) agrees to accept the reproduced information from Foley Buhl Roberts & Associates Inc. without any warranties, guarantees and/or representations of any nature whatsoever regarding the correctness, dimensional and/or quantitative accuracy and/or completeness of any such information contained therein.
2. The User further agrees that such information shall be used as reference material only for the production of Shop and Coordination Drawings for the referenced project to which this Specification applies and only for that project.
3. The User further agrees to release, indemnify, hold harmless and defend Foley Buhl Roberts & Associates Inc. with respect to any claims, costs (including the cost of litigation), losses, damages and/or liabilities which arise from (or relate to) the use, misuse, modification, interpretation, misinterpretation and/or misrepresentation of the reproduced information.

K. Provide manufacturer's data for structural steel primers to be used.

L. Submit certified copies of mill test reports for all structural steel furnished.

M. LEED v4-S SUBMITTAL REQUIREMENTS.

1. Submit relevant supporting documentation as required by LEED for schools v4 and as detailed in SECTION 018113 - SUSTAINABLE DESIGN REQUIREMENTS.
2. Submit a completed LEED MATERIAL REPORTING FORM, per SECTION 018113 - SUSTAINABLE DESIGN REQUIREMENTS.
3. Product substitution requests are subject to additional LEEDv4-S submittal requirements, see SECTION 012500 - SUBSTITUTION PROCEDURES.

1.06 QUALITY ASSURANCE

A. Qualifications: The steel fabricator and erector conducting the work of this Section shall be AISC certified and experienced in fabricating steel similar to that required for this project.

B. All materials and workmanship under this Section shall be subject to inspection in the mill, shop or field by the Architect, or by qualified inspectors selected by the Architect and paid directly by the Owner.

C. A qualified Testing Agency for testing and inspection will be selected by the Owner and will be paid directly by the Owner.

D. However, such inspection, wherever conducted, shall not relieve the Contractor of his responsibility to furnish materials and workmanship in accordance with the Contract requirements, nor shall the inspector's acceptance of materials or workmanship prevent later rejection of same by the Owner or Architect if defects are discovered.

E. Inspection of welding work other than moment connections will consist of non-destructive spot testing done by visual, magnetic particle, radiographic or ultrasonic methods, whichever is most effective for joint to be tested.

F. Inspection of welding for work for moment connections will be tested 100 percent either by ultrasonic or by radiography in accordance with the latest edition of the AWS Structural Welding Code. However, if, for an individual welder, the reject rate is demonstrated to be five percent or less, the non-destructive testing rate may be reduced to 25 percent for the individual welder. The evaluation of the welding will be based on a sampling of at least 40 completed welds.

G. Inspection of bolting work will be in accordance with "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts" by the American Institute of Steel Construction, latest edition. All bearing (Type N) bolts shall be fully tightened. Slip critical (Type SC) bolts shall be fully tensioned. All bolting will be visually inspected, as directed by the Architect and Structural Engineer.

H. The Contractor shall give proper notice to the Testing Agency and shall allow access and full facilities as required for this inspection.

I. A final report will be issued by the Testing Agency following the completion of work in this Section stating that all deficiencies have been corrected.

1.07 SUBSTITUTIONS

A. Refer to Section 012500 - SUBSTITUTION PROCEDURES.

PART 2 PRODUCTS

2.01 LEED v4-S PRODUCT REQUIREMENTS

A. Products and materials used for this section of the work are required to meet the following criteria for LEED v4-S materials Credits, and a completed LEED v4 Materials Reporting Form shall be submitted for all materials in this SECTION:

1. Recycled Content. (See Section 018113 Sustainable Design Requirements for overall project recycled content requirements.) The General Contractor shall examine each product or material specification below for a stated minimum recycled content requirement, and if none is stated, the requirements under 018113 shall govern.
2. Regional Content. (See Section 018113 Sustainable Design Requirements for overall project regional content requirements.) The General Contractor shall examine each product or material specification below for a stated minimum regional content requirement, and if none is stated, the requirements under 018113 shall govern.
3. Furnish any adhesives, sealants, paints and coatings such that they meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113 - SUSTAINABLE DESIGN REQUIREMENTS.

2.02 MATERIALS

A. Structural steel W and WT shapes shall comply with the requirements of ASTM A 992 or A 572 (50 ksi minimum yield) for Structural Steel. Structural steel plates and shapes other than W and WT shapes shall comply with ASTM A 36 (36 ksi minimum yield). Square and rectangular steel tubing shall comply with ASTM A 500 - Grade C (50 ksi minimum yield). Round steel tubing shall comply with ASTM A 500 - Grade B (42 ksi minimum yield).

B. Bolts, nuts, and washers shall comply with the requirements of ASTM A 325. Bolts shall be A 325N with washer, except A 325, Type SC at slip critical connections indicated on the Drawings. All field bolts shall be tension control (TC) type, with twist-off lugs.

C. Anchor rods shall comply with the requirements of ASTM F 1554 - Grade 36, except F 1554 – Grade 105 as indicated on the Drawings. All anchor rods shall be headed type, with washer.

D. Expansion anchors shall be Hilti Kwik Bolt TZ Expansion Anchors; Strong Bolt by Simpson Strong Tie; or Wedge Bolt by Powers Fastening Systems or an approved equal.

E. Adhesive injection anchor bolts shall be Hilti HIT Adhesive Anchors, ET with Set XP Epoxy Adhesive Anchors by Simpson Strong Tie, PE 1000 Epoxy Adhesive Anchor System by Powers Fastening Systems or an approved equal. Use renovation screens when bolting to hollow substrate.

F. Metallic Filler: Composition of 90% ground metal and 10% epoxy binder such as "Plastic Steel" manufactured by ITW Devon Corporation, "Scotch-Weld Adhesive 1751" by the 3M Corporation, or an approval equal.

G. Thermal isolating sheets shall be fiber-reinforced structural thermal breaks such as Fabreeka-TIM by Fabreeka, Armatherm FR by Armadillo, Farrat TBK by Farrat, or equal approved by the Architect. Provide manufacturer's standard thermal isolating washers and bushings at all thermally isolated connections.

2.03 FABRICATION

A. All structural steel shall be fabricated in accordance with References, approved Shop Drawings, and as hereinafter specified.

B. All structural steel to remain exposed to view in the completed project shall be classified as Exposed to View Structural Steel (EVSS). Provide continuously welded joints at EVSS members. The welds shall be ground smooth, contoured and filled with metallic filler or otherwise treated as required to blend with adjacent parent metal. In addition, fabricate as follows:

1. Fabricate EVSS with exposed surfaces smooth, square and of surface quality with the approved mockups. Use special care in handling and shipping EVSS before and after shop painting.
2. Fabricator shall grind welds of EVSS smooth. For groove welds, the welds shall be made flush to the surfaces each side and be within +1/16" and –0" of plate thickness.
3. Remove spatter and grind where necessary for blending. Contour surfaces to match those surfaces that are adjacent. Form fillets to the smallest radii possible and still comply with the structural requirements. Provide additional metallic filler to form smooth continuous surfaces that will appear as one piece construction when primed. Grind and polish as required, to match profile on approved mockup.
4. All exposed welds shall be continuous, unless otherwise noted on the Drawings. Provide uniform weld size and profile.
5. All weld show-through shall be minimized by grinding and filling the far side with metallic filler as required to provide a smooth unblemished surface.
6. Joint gaps between abutting members shall be uniform and minimized to 1/8".
7. Fabricate EVSS members such that piece marks are fully hidden in the final structure or use media to permit full removal.
8. Members specified to be rolled to a final curved shape shall be fully shaped in the shop and tied during shipping to prevent stress relieving. Distortion of the web or stem and of outstanding flanges of open sections shall be visibly acceptable to the Architect from a distance of 20 feet under any lighting condition.

9. Seal weld open ends of rectangular hollow structural sections with 3/8” minimum closure plates with continuous ground smooth welds.

C. The design of members and connections for any portions of the structure not indicated on the Drawings shall be completed by the fabricator. Unless otherwise noted on the drawings, connections shall be capable of supporting the maximum uniform load of the member for the span shown and the material specified. Consideration must be given to the additional load carrying capacity of composite steel members. In general, and unless otherwise indicated, connections for composite beams shall be designed for at least 1.75 times the end reaction derived from the AISC uniform load beam tables for the particular beam and span. Connections for girders which support other beams shall be designed for at least 1.5 times the AISC uniform load reaction. All connection design shall be subject to approval by the Architect and Structural Engineer.

D. Welding, as indicated on the Drawings, shall be in accordance with References and shall be done only by experienced welders who have been qualified by tests as prescribed in AWS "Standard Qualifications Procedure" for the type of work required.

E. All shop connections shall be welded or bolted.

F. Weld and joint details shall comply with requirements of the "Structural Welding Code - Steel" by the American Welding Society.

G. Bolting shall comply with the requirements of AISC "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts".

H. All field connections shall be bolted, except where welding is indicated on the Drawings. All field bolts shall be tension control (TC) type, with twist off lugs.

I. Diameter of holes in bolted parts shall be 1/16 inch greater than the nominal diameter of the bolt. No unfair holes will be accepted, and enlargement of holes shall not be accomplished by burning. Burrs resulting from drilling or punching shall be ground to the surface of the material. Shearing and punching shall be done cleanly so as not to deform or mar adjacent surfaces.

J. Provide holes and connections as required for site assembly of steel work. Holes shall be plasma cut, drilled, or punched and reamed in the shop. Show sizes and locations of all such holes on the Shop Drawings.

K. Provide angles, bars, and/or other steel as necessary for deck support at columns where members do not frame in from all four sides and where connections interfere with the support of metal decking.

L. Provide angles, channels, and/or other steel as necessary around all openings in roof deck at drains, fans, and other similar penetrations as shown in drawings. Coordinate size, number, and location with Architectural, Mechanical, Electrical, and Plumbing trades.

M. In general, beam to beam, and beam to column connections shall be double angle type connections, unless otherwise shown on the Drawings.

N. Vent holes for HSS members to be galvanized shall be located at lower elevations/sides of members and at areas not exposed to view. Vent holes shall be plugged following galvanizing with zinc plugs to match the appearance of the surrounding galvanizing. Vent hole plugs shall prevent moisture entering the HSS members.

2.04 SURFACE PREPARATION AND PROTECTIVE COATINGS

A. All structural steel shall be cleaned of all scale, rust, grease and other foreign matter.

B. Surface preparation for interior structural steel not exposed to view or structural steel exposed to view and primed designated as (EP), shall be in accordance with “Steel Structures Painting Council Surface Preparation No. 3, Power Tool Cleaning” and shall be left unprimed.

C. Surface preparation for interior structural steel that will remain exposed to view and designated (EVSS), steel to be hot-dip galvanized, and all exterior structural steel shall be in accordance with “Steel Structures Painting Council Surface Preparation No. 6, Commercial Blast Cleaning”.

D. Primer for interior structural steel that will remain exposed to view (EVSS) and is not scheduled to be fireproofed shall be Tnemec 10-09 Modified Alkyd Primer (white or grey color), Sherwin Williams High Solids Alkyd Metal Primer (white or light gray), Benjamin Moore Super Spec HP Metal Primer KP14 (white or light gray), or approved equivalent.

E. Primer for structural steel that will remain exposed to view and is scheduled to be fireproofed with intumescent paint shall be Albi 490W by the Albi Manufacturing Company, or approved equivalent.

F. Where primer is required on steel members, omit the primer at the following locations:

1. Surfaces embedded in concrete.
2. Surfaces to be field welded.
3. Surfaces at slip-critical connections.
4. The tops of steel beams where deck is to be welded.
5. Surfaces to be spray fireproofed.

G. Primer shall be applied in accordance with manufacturer’s instruction to provide a minimum dry film thickness of 3.0 to 3.5 mils. Use priming methods that result in full coverage of joints, corners, edges and exposed surfaces.

H. Shop and field touch-up paint shall be compatible with intumescent paint or paint to be used for finish painting in the field as required under Section 090007 - PAINTING.

I. Primer paint shall be applied in accordance with manufacturer's directions to ensure no running or sagging.

J. After erection, all scarred areas shall be touched up with the same paint as the shop coat.

2.05 GALVANIZING

A. All steel items noted on the Drawings to be galvanized shall be galvanized by the hot dip process conforming to ASTM A 123 with the addition of nickel to zinc bath. All galvanizing shall be done after fabrication. All galvanized material to be painted shall be primed by the galvanizer within 12 hours after galvanizing and shall be force cured in a facility capable of maintaining 150 degrees F. All hot dip galvanized steel shall be safeguarded against embrittlement according to ASTM A 143. Primer shall be compatible with finish paint as specified under Section 090007 - PAINTING.

B. The galvanizer shall inspect all members for compliance with this Specification, and shall mark each member with a stamp indicating the ASTM number and the weight of the zinc coating in ounces per square foot.

PART 3 EXECUTION

3.01 STORAGE AND HANDLING

A. Care and protection shall be given to all structural steel during handling and storage. If items are to be stored prior to installation, they shall not be placed in contact with the ground. Care shall be taken to avoid abrasions and damage.

3.02 ERECTION

A. All structural steel shall be anchored and erected in accordance with References, approved Shop Drawings, and as hereinafter specified.

B. All work shall be accurately set to established lines and elevations and rigidly fastened in place with suitable attachments to the construction of the building.

C. Temporary bracing, guying, and support shall be provided to keep the structure safe and aligned at all times during construction, and to prevent danger to persons and property. Check all temporary loads and stay within safe capacity of all building components.

D. Except as otherwise indicated on the Drawings, all field connections shall be bolted in accordance with AISC "Specifications for Structural Joints using ASTM A 325 or A 490 Bolts". All bearing (Type N) bolts shall be fully tightened. Slip critical (Type SC) bolts shall be fully tensioned. All twist-off lugs shall be removed. Bolts that are hand tightened shall be clearly marked upon completion. Use not less than one washer placed under the turning part of the assembly. Do not enlarge unfair holes in members by burning or by using drift pins. Ream holes that must be enlarged to admit bolts. Replace connection plates that are misaligned where holes cannot be aligned with acceptable final appearance.

E. The initial installations of expansion anchors and adhesive injection anchors shall be witnessed by the manufacturer’s representative and load tests shall be performed to test their adequacy.

F. Do not cut or alter any member in the field without Architect's written approval for each specific condition.

G. Welding, as indicated on the Drawings, shall be in accordance with References and shall be done only by experienced welders who have been qualified by tests as prescribed in AWS "Standard Qualifications Procedure" for the type of work required.

H. After erection, all structural steel members and connections shall be touched up with the appropriate primer.

I. Prior to field welding of any galvanized steel element, galvanizing in the general area to be welded shall be removed by grinding.

J. All galvanized steel elements shall be touched up with a zinc-rich paint at areas scarred by welding or bolting.

K. Install fiber-reinforced structural thermal breaks at all exterior steel to interior steel connections and below base plates, as shown on the Drawings.

3.03 SURVEY

A. Engage the services of a licensed Engineer or Surveyor to survey elevations and locations of all column bases, prior to start of erection of structural steel. Any discrepancies shall be brought to the attention of the Architect. Erection shall not proceed until any required remedial measures have been completed.

B. Upon completion of the building frame provide a survey of perimeter building columns **at all levels** that indicates the plan deviation (as applicable) from the column grid in each direction.

3.04 TOLERANCES

A. Individual structural steel members shall be plumbed, leveled, and aligned in accordance with the requirements of Chapter 7 of the "Code of Standard Practice for Steel Buildings and Bridges", except as follows:

1. All tolerances (rolling, fabrication, and erection) combined shall result in a framing in the complete structure being located within ¾ inches of its theoretical location, except that members at connections to columns shall be within 1/8 inch vertically of their theoretical elevations.
2. Tolerances for Exposed to View Structural Steel (EVSS) shall not exceed one-half those permitted for structural steel.

END OF SECTION

SECTION 051226

SHEAR CONNECTORS

PART 1 GENERAL

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. The work of this Section consists of furnishing and installing all shear connector work as shown on the Drawings and as specified herein and includes, but is not limited to the following:

1. Headed shear connectors.

B. LEED v4-S Requirements:

1. The work of this section includes material and submittal requirements for fulfillment of Project LEED v4-S Certification. LEED v4-S Certification at “Silver” Level is an Owner Requirement that is critical to secure project funding from the Massachusetts School Building Authority. LEED v4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. Related work shall be performed under the following Sections:

1. Section 033000 CAST-IN-PLACE CONCRETE.
2. Section 051200 STRUCTURAL STEEL FRAMING.
3. Section 053100 STEEL DECKING.

1.04 REFERENCES (LATEST EDITIONS)

A. "Specification for the Design, Fabrication and Erection of Structural Steel for Buildings" by the American Institute of Steel Construction.

B. "Structural Welding Code - Steel" by the American Welding Society.

C. ASTM listed standards by the American Society for Testing and Materials.

D. In case of conflict between the References and the Project Specification, the Project Specification shall govern. In the case of conflict between References, the more stringent shall govern.

E. When compliance with such References is specified for materials or a manufactured or fabricated product, the Contractor, if requested, shall furnish an affidavit from the manufacturer or fabricator, certifying that the materials or product delivered to the job meets the requirements specified. However, such certification shall not relieve the Contractor from the responsibility of complying with any added requirements specified herein.

1.05 SUBMITTALS

A. Submit complete Shop Drawings in accordance with the provisions of SECTION 013300 - SUBMITTALS.

B. Shop Drawings shall indicate size and position of all shear connectors. Shop Drawings shall indicate fastening methods for shear connectors.

C. Approval of Shop Drawings will be for size and arrangement of shear connectors. Errors in dimensions shown on the Shop Drawings shall be the responsibility of the Contractor.

D. Purchasing of any materials or performing any work prior to the final approval of Shop Drawings will be entirely at the risk of the Contractor.

E. Reproduction of structural plans, sections and details, and any like information by reprographic or electronic methods for use as Shop and Coordination Drawings is subject to the following conditions:

1. The entity producing the Shop and Coordination Drawings (The "User") agrees to accept the reproduced information from Foley Buhl Roberts & Associates Inc. without any warranties, guarantees and/or representations of any nature whatsoever regarding the correctness, dimensional and/or quantitative accuracy and/or completeness of any such information contained therein.
2. The User further agrees that such information shall be used as reference material only for the production of Shop and Coordination Drawings for the referenced project to which this Specification applies and only for that project.
3. The User further agrees to release, indemnify, hold harmless and defend Foley Buhl Roberts & Associates Inc. with respect to any claims, costs (including the cost of litigation), losses, damages and/or liabilities which arise from (or relate to) the use, misuse, modification, interpretation, misinterpretation and/or misrepresentation of the reproduced information.

F. LEED v4-S SUBMITTAL REQUIREMENTS:

1. Submit relevant supporting documentation as required by LEED for schools v4 and as detailed in SECTION 018113 - SUSTAINABLE DESIGN REQUIREMENTS.
2. Submit a completed LEED MATERIAL REPORTING FORM, per SECTION 018113 - SUSTAINABLE DESIGN REQUIREMENTS.
3. Product substitution requests are subject to additional LEEDv4-S submittal requirements, see SECTION 012500 - SUBSTITUTION PROCEDURES.

1.06 QUALITY ASSURANCE

A. All materials and workmanship under this Section shall be subject to inspection in the mill, shop or field by the Architect, or by qualified inspectors selected by the Architect and paid directly by the Owner.

B. However, such inspection, wherever conducted, shall not relieve the Contractor of his responsibility to furnish materials and workmanship in accordance with Contract requirements, nor shall inspector's acceptance of materials or workmanship prevent later rejection of same by the Owner or Architect, if defects are discovered.

C. A minimum of two shear connector studs shall be welded at the start of each production period to determine proper settings for the generator, control unit, and stud welder. These studs shall be capable of being bent 45 degrees from vertical without weld failure. If, after welding, visual inspection reveals that a sound, full 360 degree weld has not been achieved for any particular stud, that stud shall be struck with a hammer and bent approximately 15 degrees from vertical towards the nearest end of the beam, or bent away from the opening in the fillet weld. Studs meeting this test shall be considered acceptable and shall be left in this position. Studs failing under this test shall be replaced.

D. The Contractor shall give proper notice to inspection agencies designated by the Architect and shall allow access and full facilities as required for this inspection.

E. A final report will be issued by the Testing Agency following the completion of the work of this Section.

PART 2 PRODUCTS

2.01 LEED v4-S PRODUCT REQUIREMENTS

A. Products and materials used for this section of the work are required to meet the following criteria for LEED v4S materials Credits, and a completed LEED 4 Materials Reporting Form shall be submitted for all materials in this SECTION:

1. Recycled Content. (See Section 018113 Sustainable Design Requirements for overall project recycled content requirements.) The General Contractor shall examine each product or material specification below for a stated minimum recycled content requirement, and if none is stated, the requirements under 018113 shall govern.
2. Regional Content. (See Section 018113 Sustainable Design Requirements for overall project regional content requirements.) The General Contractor shall examine each product or material specification below for a stated minimum regional content requirement, and if none is stated, the requirements under 018113 shall govern.
3. Furnish any adhesives, sealants, paints and coatings such that they meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

2.02 MATERIALS

A. All shear connectors shall be made from cold drawn bar stock conforming to the requirements of ASTM A108, Grades 1015 through 1020, either semi- or fully- killed. See drawings for lengths and diameter.

B. Tensile requirements of shear connectors, as determined by tests (ASTM A 370) of bar stock after drawing, or of full diameter finished shear connectors, at the manufacturer's option, shall conform to the following:

1.	Tensile strength, (psi) minimum:	60,000
2.	Elongation in two inches, (%) minimum:	20
3.	Reduction in area, (%) minimum:	50

C. Shear connectors shall be of uniform diameter; heads shall be concentric and normal to shaft; and the weld shall be chamfered and solid fluxed. Shear connectors shall not be painted or galvanized.

PART 3 EXECUTION

3.01 STORAGE

A. Care and protection shall be given to all shear connector studs during handling and storage. If connectors are to be stored prior to installation, they shall not be placed in contact with the ground and shall be protected from the elements and kept dry.

3.02 INSTALLATION

A. Shear connector studs shall be installed by an automatic welding system, in the number and spacing shown on approved Shop Drawings and as herein specified.

B. Steel in the area to which the shear connector is to be directly welded shall be free of loose mill scale, heavy rust, dirt and paint. In addition, where studs are to be welded through metal deck, verify that no water has become entrapped between the beam and the deck, prior to welding studs.

C. Studs shall not be welded when the temperature falls below 10 degrees Fahrenheit, or when the surface is wet with rain or snow.

D. All welding shall be in accordance with the "Structural Welding Code - Steel".

E. After welding, break off ceramic arc shields and dispose of them properly.

END OF SECTION

SECTION 052100

STEEL JOIST FRAMING

PART 1 GENERAL

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. The work of this Section consists of furnishing and installing all steel joist work as shown on the Drawings and as specified herein and includes, but is not limited to, the following:

1. Steel joists - Longspan LH Series.
2. Bridging, anchors, extended ends, ceiling extensions, and special seats.
3. Shop paint and field touch-up paint after erection.

B. LEEDv4-S Requirements:

1. The work of this section includes material and submittal requirements for fulfillment of Project LEED V4-S Certification. LEED v4-S Certification at “Silver” Level is an Owner Requirement that is critical to secure project funding from the Massachusetts School Building Authority. LEED v4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.
2. For all paints and coatings, meet the LEED requirements for IEQ Credit 4.2 and as defined in Subparagraph 2.04 of Section 018113 - SUSTAINABLE DESIGN REQUIREMENTS.
3. For all paints and coatings, submit industry-wide (generic) EPDs or product specific Type III EPDs.

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The related work shall be performed under the following Sections:

1. Section 051200 STRUCTURAL STEEL FRAMING.
2. Section 053100 STEEL DECKING.
3. Section 055000 METAL FABRICATIONS.
4. Section 090007 PAINTING.

1.04 REFERENCES (LATEST EDITIONS)

A. "Standard Specifications, Load Tables and Weight Tables for Longspan Steel Joists – LH Series" by the Steel Joist Institute.

B. "Structural Welding Code - Steel" by the American Welding Society.

C. ASTM listed standards by the American Society for Testing and Materials.

D. SSPC listed standards by the Steel Structures Painting Council.

E. In case of conflict between the References and the Project Specification, the Project Specification shall govern. In the case of conflict between References, the more stringent shall govern.

F. When compliance with any Reference is specified for materials or a manufactured or fabricated product, the Contractor, if requested, shall furnish an affidavit from the manufacturer or fabricator certifying that the materials or product delivered to the job meets the requirements specified. However, such certification shall not relieve the Contractor from the responsibility of complying with any added requirements specified herein.

1.05 SUBMITTALS

A. Submit complete Shop Drawings in accordance with the provisions of SECTION 013300 – SUBMITTALS.

B. Shop Drawings shall indicate type, number, sizes, details, and spacing of all members. Shop Drawings shall indicate fastening methods for joists, bridging, anchors and all other details for installation.

C. Approval of Shop Drawings will be for size and arrangement of items and for strength of field connections. Errors in dimensions shown on the Shop Drawings shall be the responsibility of the Contractor.

D. Fabrication of any material or performing of any work prior to the final approval of the Shop Drawings shall be entirely at the risk of the Contractor.

E. Reproduction of structural plans, sections and details, and any like information by reprographic or electronic methods for use as Shop and Coordination Drawings is subject to the following conditions:

1. The entity producing the Shop and Coordination Drawings (The "User") agrees to accept the reproduced information from Foley Buhl Roberts & Associates, Inc. without any warranties, guarantees and/or representations of any nature whatsoever regarding the correctness, dimensional and/or quantitative accuracy and/or completeness of any such information contained therein.

2. The User further agrees that such information shall be used as reference material only for the production of Shop and Coordination Drawings for the referenced project to which this Specification applies and only for that project.

3. The User further agrees to release, indemnify, hold harmless and defend Foley Buhl Roberts & Associates, Inc. with respect to any claims, costs (including the cost of litigation), losses, damages and/or liabilities which arise from (or relate to) the use, misuse, modification, interpretation, misinterpretation and/or misrepresentation of the reproduced information.

F. Submit certified copies of mill test reports for all structural steel furnished.

G. LEED v4-S Submittals (Refer to SECTION 018113 – SUSTAINABLE DESIGN REQUIREMENTS):

1. Submit relevant supporting documentation as required by LEEF for schools v4 and as detailed in SECTION 018113 – SUSTAINABLE DESIGN REQUIREMENTS.

2. Submit a completed LEED MATERIAL REPORTING FORM, per SECTION 018113 – SUSTAINABLE DESIGN REQUIREMENTS.

3. Product substitution requests are subject to additional LEEDv4-S submittal requirements, see SECTION 012500 – SUBSTITUTION PROCEDURES.

1.06 QUALITY ASSURANCE

A. All materials and workmanship under this Section shall be subject to inspection in the mill, shop or field by the Architect, or by the Testing Agency selected by the Architect and paid directly by the Owner.

B. However, such inspection, wherever conducted, shall not relieve the Contractor of his responsibility to furnish materials and workmanship in accordance with Contract requirements, nor shall Testing Agency's acceptance of materials or workmanship prevent later rejection of same by the Owner or Architect if defects are discovered.

C. The Contractor shall give proper notice to the Testing Agency designated by the Architect and shall allow access and full facilities for this inspection and testing.

PART 2 PRODUCTS

2.01 LEED v4-S REQUIREMENTS

A. Products and materials used for this section of the work are required to meet the following criteria for LEEDv4-S materials Credits, and a completed LEED v4 Materials Reporting Form shall be submitted for all materials in the SECTION:

1. Recycled Content. (See Section 018113 Sustainable Design Requirements for overall project recycled content requirements.) Contractor shall examine each product or material specification below for a stated minimum recycled content requirement, and if none is stated, the requirements under 018113 shall govern.
2. Regional Content. (See Section 018113 Sustainable Design Requirements for overall project regional content requirements.) Contractor shall examine each product or material specification below for a stated minimum regional content requirement, and if none is stated, the requirements under 018113 shall govern.
3. Furnish any adhesives, sealants, paints, and coatings such that they meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113 – SUSTAINABLE DESIGN REQUIREMENTS.

2.02 MATERIALS

A. All steel joists and accessories shall be formed of material in accordance with the Reference Specification. See drawings for type, depth and size.

2.03 FABRICATION

A. All steel joists and accessories shall be fabricated in accordance with Reference Specifications, approved Shop Drawings, and as hereinafter specified.

B. All steel joists and accessories shall be fabricated by a member of the Steel Joist Institute.

C. All steel joists shall be fabricated with a standard camber unless noted otherwise.

2.04 PROTECTIVE COATING

A. All items shall be cleaned of all scale, rust, weld slag and weld spatter and other foreign matter and be given one shop coat of gray rust inhibiting paint, one mil dry film thickness.

B. Shop and field touch-up paint shall be compatible with paint to be used for finish painting in the field under another Section as indicated on the Shop Drawings.

C. After erection, all scarred areas shall be touched up with the same paint as the shop coat.

PART 3 EXECUTION

3.01 STORAGE AND HANDLING

A. Care and protection shall be given to all items during handling and storage. If items are to be stored prior to installation, they shall not be placed in contact with the ground.

3.02 FABRICATION

A. All steel joists shall be fabricated in accordance with Reference Standards, approved Shop Drawings, and as hereinafter specified.

B. The design of members and connections for any portions of the structure not indicated on the Drawings shall be completed by the fabricator. Connections shall be capable of supporting the maximum uniform load of the member for the span shown and the material specified. All connection design shall be subject to approval by the Architect and Structural Engineer.

C. Welding, as indicated on the Drawings, shall be in accordance with Reference Standards and shall be done only by experienced welders who have been qualified by tests as prescribed in AWS “Standard Qualifications Procedure” for the type of work required.

3.03 ERECTION

A. All steel joists and accessories shall be installed in accordance with References, approved Shop Drawings, and as hereinafter specified.

B. Steel joists shall be welded to steel supports with two ¼ inch welds, each at least three inches long.

C. Bridging shall be installed in accordance with Reference Specifications or as shown on the Drawings.

D. Joists shall be permanently fastened to supports and all bridging and anchors completely installed before any construction loads (other than workers) are placed on the joists.

E. All field welding shall be in accordance with References and shall be done only by experienced welders who have previously been qualified by tests as prescribed in AWS "Standard Qualification Procedure" to perform the type of work required.

END OF SECTION

SECTION 053100

STEEL DECKING

PART 1 GENERAL

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of the SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of the SECTION.

1.02 SCOPE OF WORK

A. The work of this Section consists of furnishing and erecting all metal deck work as shown on the Drawings and as specified herein and includes, but is not limited to, the following:

1. Metal roof deck.
2. Acoustic metal roof deck.
3. Metal floor deck.
4. Roof deck accessories: finish strips, butt strips, valley plates, splice plates, sump pans and rubber closures.
5. Floor deck accessories: finish strips, butt strips, closures and pour stops.
6. Shop coating and field touch-up painting after erection.

B. LEED v4-S Requirements:

1. The work of this section includes material and submittal requirements for fulfillment of Project LEED v4-S Certification. LEED v4-S Certification at “Silver” Level is an Owner Requirement that is critical to secure project funding from the Massachusetts School Building Authority. LEED v4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. Related work shall be performed under the following Sections:

1. Section 033000 CAST-IN-PLACE CONCRETE.
2. Section 051200 STRUCTURAL STEEL FRAMING.
3. Section 052100 STEEL JOIST FRAMING.
4. Section 051226 SHEAR CONNECTORS.
5. Section 072100 INSULATION.
6. Section 090007 PAINTING.

7. Section 092116 GYPSUM WALLBOARD.

1.04 REFERENCES (LATEST EDITIONS)

A. "Basic Design Specifications for Steel Deck Construction" by the Steel Deck Institute.

B. "Specifications for the Design of Light Gauge Cold Formed Structural Members" by the American Iron and Steel Institute.

C. ASTM listed standards by the American Society for Testing and Materials.

D. "Structural Welding Code - Steel" by the American Welding Society.

E. In case of conflict between the References and the Project Specification, the Project Specification shall govern. In the case of conflict between References, the more stringent shall govern.

F. When compliance with such References is specified for materials or a manufactured or fabricated product, the Contractor, if requested, shall furnish an affidavit from the manufacturer or fabricator, certifying that the materials or product delivered to the job meets the requirements specified. However, such certification shall not relieve the Contractor from the responsibility of complying with any added requirements specified herein.

1.05 SUBMITTALS

A. Submit complete Shop Drawings in accordance the provisions of SECTION 013300 - SUBMITTALS.

B. Shop Drawings shall indicate size and location of framing supports and the location, lengths, types, gauges, and markings of deck units. Shop Drawings shall indicate fastening methods for deck units, and the type of connections, welds or screws, and other items as hereinafter called for.

C. Shop Drawings shall also show all accessories and methods of attachment to the building frame.

D. Approval of Shop Drawings will be for size and arrangement of units and for strength of connections. Errors in dimensions shown on the Shop Drawings shall be the responsibility of the Contractor.

E. Fabrication of any material or performing any work prior to the final approval of the Shop Drawings will be entirely at the risk of the Contractor.

F. Reproduction of structural plans, sections and details, and any like information by reprographic or electronic methods for use as Shop and Coordination Drawings is subject to the following conditions:

1. The entity producing the Shop and Coordination Drawings (The "User") agrees to accept the reproduced information from Foley Buhl Roberts & Associates Inc. without any warranties, guarantees and/or representations of any nature whatsoever regarding the correctness, dimensional and/or quantitative accuracy and/or completeness of any such information contained therein.

2. The User further agrees that such information shall be used as reference material only for the production of Shop and Coordination Drawings for the referenced project to which this Specification applies and only for that project.

3. The User further agrees to release, indemnify, hold harmless and defend Foley Buhl Roberts & Associates Inc. with respect to any claims, costs (including the cost of litigation), losses, damages and/or liabilities which arise from (or relate to) the use, misuse, modification, interpretation, misinterpretation and/or misrepresentation of the reproduced information.

G. LEED v4-S SUBMITTAL REQUIREMENTS.

1. Submit relevant supporting documentation as required by LEED for schools v4 and as detailed in SECTION 018113 - SUSTAINABLE DESIGN REQUIREMENTS.

2. Submit a completed LEED MATERIAL REPORTING FORM, per SECTION 018113 - SUSTAINABLE DESIGN REQUIREMENTS.

3. Product substitution requests are subject to additional LEEDv4-S submittal requirements, see SECTION 012500 - SUBSTITUTION PROCEDURES.

1.06 QUALITY ASSURANCE

A. All materials and workmanship under this Section shall be subject to inspection in the mill, shop or field by the Architect or by Testing Agency selected by the Architect and paid directly by the Owner. All deck fastening will be visually inspected.

B. However, such inspection, wherever conducted, shall not relieve the Contractor of his responsibility to furnish materials and workmanship in accordance with Contract requirements, nor shall the inspector's acceptance of materials or workmanship prevent later rejection of same by the Owner or Architect if defects are discovered.

C. A qualified Testing Agency for testing and inspection will be selected by the Owner and will be paid directly by the Owner.

D. The Contractor shall give proper notice to the Testing Agency designated by the Architect and shall allow access and full facilities as required for this inspection and testing.

E. A final report will be issued by the Testing Agency following the completion of the work in this Section.

PART 2 PRODUCTS

2.01 LEED v4-S PRODUCT REQUIREMENTS

A. Products and materials used for this section of the work are required to meet the following criteria for LEED-v4S materials Credits, and a completed LEEDv4 Materials Reporting Form shall be submitted for all materials in this SECTION:

1. Recycled Content. (See Section 018113 Sustainable Design Requirements for overall project recycled content requirements.) The General Contractor shall examine each product or material specification below for a stated minimum recycled content requirement, and if none is stated, the requirements under 018113 shall govern.

2. Regional Content. (See Section 018113 Sustainable Design Requirements for overall project regional content requirements.) The General Contractor shall examine each product or material specification below for a stated minimum regional content requirement, and if none is stated, the requirements under 018113 shall govern.

3. Furnish any adhesives, sealants, paints and coatings such that they meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113 - SUSTAINABLE DESIGN REQUIREMENTS.

2.02 METAL ROOF DECK

A. Typical metal roof deck shall be formed of steel sheets conforming to ASTM A 653 Grade 33, with a minimum yield strength of 33,000 psi with nestable side lap. All metal roof deck shall have a maximum nominal top-side gap between flutes of 2¾". Galvanized coating shall conform to ASTM A 653 G 60. See Drawings for deck type, gauge and depth.

B. Acoustic metal roof deck shall be cellular type and formed of steel sheets conforming to ASTM A 653 Grade 33 with a minimum yield strength of 33,000 psi with interlocking side lap and perforated bottom plate. All metal roof deck shall have a maximum nominal top-side gap between flutes of 2¾". Galvanized coating shall conform to ASTM A 653 G 60. Sound absorbing batts shall be inert non-organic mineral fiber and shall be placed in each cell prior to delivery to the job site. To facilitate field painting of perforated surfaces, the sound absorbing elements shall be supported above the surface by spacers. The minimum Noise Reduction Coefficient (NRC) shall be 0.85. The minimum Sound Absorption Coefficients for various frequencies shall be as follows (frequency (Hz)/coefficient): 125/0.40, 250/0.50, 500/0.85, 1000/0.90, 2000/0.75, and 4000/0.60. Refer to the Drawings for deck type, gauge and depth.

C. Typical metal roof deck units shall be cut to required lengths so that end joints will occur over supporting members and be lapped a minimum of two inches. Typical lengths shall extend over three or more spans, where possible.

D. Acoustic metal roof deck units shall be cut to required lengths so that end joints will butt over supporting members. Typical lengths shall extend over three or more spans, where possible.

E. Accessory metal sections shall be of the same material, gauge and finish as the metal deck units, unless otherwise indicated.

F. Sump pans shall be recessed and not lighter than 14 gauge galvanized sheets. Size of the hole to be field cut to match the roof drain.

G. Closures shall be rubber to seal flutes.

H. All exposed surfaces shall be shop primed and ready for job site finish painting.

2.03 COMPOSITE METAL FLOOR DECK

A. Typical metal floor deck shall be formed of steel sheets conforming to ASTM Standard A 653 minimum Grade 40 and shall be composite type with six inch wide (nominal) flutes top and bottom sides at 12 inch on center and with a minimum yield strength of 40,000 psi with interlocking side laps. Galvanized coating shall conform to ASTM A 653 G 60. Refer to the Drawings for gauge and depth. Units shall have vented bottom flutes, except as noted on the drawings. Vent openings shall account for 0.5% of the surface area covered by the decking.

B. Metal floor deck units shall be cut so that end joints butt over supporting members. Typical lengths shall extend over three or more spans where possible.

C. The deck manufacturer shall be selected to meet strength requirements during concrete placement and provide temporary shoring as required.

D. Accessory metal sections shall be of the same material, gauge and finish as the metal deck units, unless otherwise indicated.

E. Pour stops shall be not lighter than 18 gauge and be of the same material and finish as the metal deck units. Use heavier gauge where indicated on the Drawings.

F. All exposed surfaces shall be shop primed and ready for job site finish painting.

2.04 PROTECTIVE COATINGS

A. Metal deck units shall be cleaned of scale, rust, grease, oil or other foreign matter and be given a phosphate conversion coating. Metal deck surfaces to remain exposed to view, shall then be shop coated with an approved primer and oven baked. The primer shall be verified by the field painting contractor for compatibility with approved field top coat paints under the Section 090007 - PAINTING.

B. Shop and field touch-up paint shall be compatible with paint to be used for finish painting in the field under the Section 090007 - PAINTING.

PART 3 EXECUTION

3.01 STORAGE

A. Care and protection shall be given to all metal decking material during handling and storage. During unloading and hoisting, extra care shall be given to prevent damage to the ends, sides and distortion of the individual items. If items are to be stored prior to installation, they shall not be placed in contact with the ground. Cellular acoustic decking must be kept dry at all times.

3.02 INSTALLATION

A. Deck shall be erected and fastened in accordance with manufacturer's specifications, approved Shop Drawings, and as hereinafter specified.

B. Place metal deck units on supporting framework and adjust to final position with proper bearings, end and side laps before permanently securing work.

C. Welds to steel supports shall be fusion type. Puddle welds shall be at least 5/8 inch diameter or an elongated weld having an equal perimeter. When metal deck units are 22 gage or lighter, use welding washers to connect all metal deck material to supporting steel.

D. Typical metal roof deck units shall be fastened to the supporting structure (minimum requirements) as follows:

1. Panel ends and end laps: Welded at each rib.
2. Intermediate supports: Welded at each rib.
3. Longitudinal edges at marginal supports: Welded at maximum spacing of 12 inches.
4. Side laps of adjacent units: Screw fastened between supports at intervals not exceeding 24 inches.

E. Acoustic metal roof deck units shall be fastened to the supporting structure (minimum requirements) as follows:

1. Panel ends and end laps: Welded at each rib.
2. Intermediate supports: Welded at each rib.
3. Longitudinal edges at marginal supports: Welded at maximum spacing of 12 inches.
4. Side laps of adjacent units: 1½ inch long seam welds between supports at intervals not exceeding 24 inches.

F. Typical composite metal floor deck units shall be fastened to the supporting structure (minimum requirements) as follows:

1. Panel ends and end laps: Welded at each rib.
2. Intermediate supports: Welded at each rib.

3. Longitudinal edges at marginal supports: Welded, maximum spacing of 12 inches.

4. Side laps of adjacent units: Button punched between supports at intervals not exceeding 30 inches.

G. Fasten accessories to deck by welding.

H. Fasteners for overlying roofing material shall be concealed within the depth of the roof deck ribs.

I. Holes and openings which are indicated on the Structural Drawings shall be cut by the deck erector. Coordinate locations with respective trades. Holes not so indicated, but which are required for work by other trades, shall be located and cut by the respective trades. No architectural, mechanical, electrical, plumbing, fire protection or other components shall be hung from metal roof deck.

J. All welding shall be in accordance with the References and shall be done only by experienced welders who have previously been qualified to perform the type of work required.

K. After erection, all scarred areas of decking, including cuts, drill holes, rust spots, welds and weld scars, shall be touched up with a zinc-rich paint.

L. Install rubber closures in all roof deck flutes over exterior walls.

M. Provide field fabricated sheet closures at all perimeter and interior columns, breaks at perimeter pour stops, and at all similar locations as required for a complete job.

N. Omit acoustic batt at exterior applications or portions of decking with exterior exposure.

END OF SECTION

SECTION 055000

MISCELLANEOUS METALS

(THIS SECTION TO BE INCLUDED IN SUB BID FOR SECTION 050001-MISCELLANEOUS AND ORNAMENTAL IRON)

PART 1 GENERAL

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish and install the following, as shown on the Drawings and specified herein:

1. Steel tube bracing at project area millwork and cubbies.
2. ~~Metal bollards~~
2. All items designated "miscellaneous metals" or "SECTION 055000" on the Drawings.
3. Continuous 3 in. x 6 in. x .375 in. aluminum angles, primed, to support LED tape light fixture at head of proscenium opening at the stage.

B. Perform all shop painting, and touch-up after erection, as specified hereunder.

C. Furnish the following, for installation under the designated SECTIONS:

1. Steel lintels (loose), not attached to structural steel, galvanized when used on exterior openings, as per lintel schedule on Structural Drawings, and over all new openings in new masonry or concrete walls and partitions, including openings for ducts, doors, and other openings in these surfaces: SECTION 040001-MASONRY.
2. Anchor bolts, inserts, and sleeves required to attached miscellaneous metal items to concrete and to masonry: SECTION 033000-CAST-IN-PLACE CONCRETE and SECTION 040001-MASONRY.
3. Metal bollards: SECTION 323000-MISCELLANEOUS SITE IMPROVEMENTS.

D. LEEDv4-S Requirements:

1. The work of this section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEEDv4-S Certification at “Silver” Level is an Owner Requirement that is critical to secure project funding from the Massachusetts School Building Authority. LEEDv4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.

2. For all paints and coatings, meet the LEED requirements for IEQ Credit 2 Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

3. For all adhesives and sealants, meet the LEED-S requirements for IEQ Credit 2 Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

4. Meet the LEEDv4-S requirements for MR Credit 2, Building Product Disclosure and Optimization – Environmental Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers' product documentation for each product having an Environmental Product Declaration (EPD).

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be performed under the designated SECTIONS:

1. Construction of mock-up: SECTION 014339-EXTERIOR MOCK-UPS.

2. Metal items requiring custom fabrication: SECTION 050001-MISCELLANEOUS AND ORNAMENTAL IRON.

3. Steel seismic clip angles at tops of all masonry walls: SECTION 050001-MISCELLANEOUS AND ORNAMENTAL IRON.

4. Structural steel items, including all attached lintels, relieving angles, leveling plates and related anchors bolts, and other steel shapes shown on the Drawings, not specified hereunder: SECTION 051200 - STRUCTURAL STEEL.

5. Manufactured metal items in conjunction with millwork: SECTION 062000 - FINISH CARPENTRY.

6. Finish painting of miscellaneous metal items except factory finished items: SECTION 090007 - PAINTING.

7. Control joints and picture rail reglets in gypsum wallboard surfaces: SECTION 092116 - GYPSUM WALLBOARD.

8. Thresholds not specified herein: SECTION 087100 - HARDWARE AND SPECIALTIES.

9. Access panels furnished under mechanical and electrical Sections: SECTION 220001 - PLUMBING, SECTION 210001 - FIRE PROTECTION, SECTION 230001 - HVAC and SECTION 260001 - ELECTRICAL.

1.04 SUBMITTALS

A. Submit complete shop drawings in accordance with the requirements of SECTION 013300-SUBMITTALS.

B. Include large-scale details of items of miscellaneous metals, specified herein, showing proposed methods of anchorage to surrounding structure, complete schedules showing locations and sizes to be furnished hereunder.

C. Each field piece shall be marked plainly with suitable erection marks, which shall also be shown on the shop drawings.

D. Submit color samples for prefinished items.

E. Mock-Up Panel Structure: Provide miscellaneous metal elements including, but not limited to, loose lintels as shown on the Drawings.

F. LEED for Schools Submittals (Refer to SECTION 013300-SUBMITTALS):

1. Relevant supporting documentation by LEED for Schools v4 and as detailed in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

2. A completed LEED MATERIALS REPORTING FORM, per SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

1.05 JOB CONDITIONS

A. Be responsible for location and levels of all work of this SECTION, except such parts as may be delivered to other and set by them. In such cases assist them in properly locating said parts.

B. Furnish anchorage items and other items required to be built into the concrete or masonry to the job at the proper time and include instructions and/or templates for their installation.

PART 2 PRODUCTS

2.00 LEEDv4-S REQUIREMENTS

A. Products and materials used for this section of the work are required to meet the following criteria for LEEDv4-S materials Credits, and a completed LEEDv4-S Materials Reporting Form shall be submitted for all materials in this SECTION:

1. IEQ Credit 2, Low Emitting Materials: Meet the LEED requirements for IEQ Credit 2 as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
2. Recycled Content. (See Section 018113 Sustainable Design Requirements for overall project recycled content requirements). Steel framing shall be produced using an average minimum 65% recycled content.
3. Regional Content. (See Section 018113 Sustainable Design Requirements for overall project regional content requirements.) This Subcontractor shall examine each product or material specification below for a stated minimum regional content requirement, and if none is stated, the requirements under 018113 shall govern.

2.01 METALS AND METAL TREATMENTS

A. General

1. Standard products meeting the detailed requirements of the miscellaneous metal items required hereunder will be considered for approval by the Architect.
2. Provide all supplemental parts necessary to complete each miscellaneous metal items whether or not such parts are shown and specified. Provide all anchorage for securing the work required hereunder.
3. Provide only new metals, free from defects impairing strength, durability, and of the commercial quality specified.
4. Curved work shall be true to radii, with smooth finished surfaces unless otherwise specified.
5. Provide fastenings of the same material, color and finish, as the metal to which applied unless otherwise noted.

B. Steel shapes, plates, and bars - Conforming to the requirements of Standard Specifications for Steel for Bridges and Buildings, ASTM Designation A 36.

C. Hydraulic cement, for installing bolts and fastenings into masonry and concrete - Quick setting, non-staining type.

D. Bolts, nuts, and washers for field or stop connections - Galvanized, nuts re-tapped to fit, for all galvanized structural steel elements.

E. Galvanizing – All metal fabrications indicated to be galvanized on the Drawings or specified hereunder to be galvanized, shall conform to the requirements of the latest edition of the following ASTM Reference Standards: A123, A153, A143, A384, A385 and A780. Fabricated steel shall be galvanized by the hot-dip process conforming to the requirements of ASTM A123, latest edition with the addition of .05 to .09 percent nickel and other earthly materials to the galvanizing kettle forming an alloy, DELTAGALV by Duncan Galvanizing or an approved equal meeting all requirements of this specification. Provide thickness of galvanizing specified in referenced standards. To prevent flux inclusions and entrapment, the steel shall be immersed in a bath of zinc ammonium chloride prior to galvanizing. The use of the wet kettle process shall be prohibited.

Wherever possible, perform galvanizing after assembly of items. Only where items are too large for galvanizing tanks will galvanizing before assembly be acceptable. Each galvanized piece shall bear the stamp of the galvanizing processing firm indicating the ASTM Specification Number and the weight of the nickel zinc coating per square foot.

F. Shop priming paint for non-galvanized steel – (Gray) Tnemec 37, H-78 high solids, Benjamin Moore Super Spec HP (P06) alkyd metal primer, PPG Pitt-Tech Plus or an approved equal.

1. Paint shall meet the requirements of LEEDv4-S IEQ Credit 2.

G. Aluminum shapes: 6063-T52, shop primed in the manner specified above for non-galvanized steel.

1. At Platform proscenium head angles: provide all required fasteners to attach through GWB to blocking in LGMF wall. Cope short leg of angles around oval ductwork. Coordinate length of angles (± 45 linear ft.) and holes drilled in long leg as required for mounting LED tape fixture with SECTION 260001-ELECTRICAL.

PART 3 EXECUTION

3.01 WORKMANSHIP, FABRICATION AND INSTALLATION

A. Grind all edges of bars and plates completely free from nicks and machine marks, prior to galvanizing and/or shop priming.

B. Where field welding is necessary, completely coat all such welds with a cold liquid galvanizing, Z.R.C., Galvicon, Zirp or an approved equal, after performing grinding operations.

C. Countersink all screw heads and bolt heads as far as practicable. Use not less than two screws, bolts or other anchorage items, at each connection point.

D. Use only screws and bolts of sufficient size to assure against loosening form normal usage of miscellaneous metal items furnished hereunder.

E. Install expansion joints and other miscellaneous metal items in strict accordance with the details, the approved shop drawings, and manufacturer's recommendations.

F. Adequately isolate all miscellaneous metal items from adjacent dissimilar materials and fastenings to minimize corrosion.

3.02 SHOP PAINTING AND TOUCH-UP OF NON-GALVANIZED STEEL

A. Surface preparation of steel - Thoroughly clean all steel of all loose mill scale by power wire brushing or sand-blasting. Remove all rust, dirt, weld flux, weld splatter, and other foreign matter by wire brushing or scraping (power wire brushing, if necessary). Grind smooth any sharp projections. Remove oil and grease deposits with solvent.

B. Shop painting - All non-galvanized steel members shall be painted before shipping. All surfaces shall be painted except surfaces, which are to be welded, and surfaces to be encased in masonry. Paint shall be applied thoroughly and evenly on the surfaces and worked in to the joints and other open areas on the surfaces. Dry mil thickness per coat of prime paint shall not be less than 2.4 mils.

C. Touch-up - After erection, touch-up all abrasions and field welds with paint meeting the requirements of LEEDv4-S IEQ Credit 2.

END OF SECTION

Division 6
Wood and Plastic

SECTION 061000

ROUGH CARPENTRY

PART 1 GENERAL

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish and install the following, as shown on the Drawings and specified herein:

1. Temporary enclosures for openings in the building, and other temporary items normally performed by the carpentry trade and required under SECTION 015000-TEMPORARY FACILITIES AND CONTROLS and SECTION 024100-DEMOLITION.
2. All interior wood blocking, nailers, furring, strapping, and other rough lumber for the various conditions as indicated on the Drawings, except as other wise specified herein.
3. Rough hardware, such as nails, bolts, screws, clips required to install rough carpentry work.
4. Miscellaneous framing and sheathing as indicated on the Drawings, except as otherwise specified herein.
5. Wood blocking (minimum 1-1/2 inches thick) for attachment of all wall and ceiling mounted equipment, toilet accessories, toilet partitions, railings, miscellaneous specialties, markerboards, tackboards, large wall mounted signage, plaques, wall mounted gymnasium equipment and other wall and ceiling mounted items indicated on the Drawings.
6. Plywood sheathing back up at drywall and ceramic tile/backer board walls in all student toilet rooms.
7. Plywood substrate at interior phenolic panels, tongue and groove wood panels and wood veneer panels.
8. MDO plywood wall sheathing at mechanical, electrical, data panels, electrical closets, main electrical room, and data IDF/MDF rooms.
9. Wood blocking (minimum 1-1/2 inches thick) at wall mounted hardware, including but not limited to door stops, magnetic hold open devices and door closers.
10. Fire retardant treated plywood roof and wall sheathing at mechanical doghouses and at vertical walls at level transitions on roof.
11. Exterior pressure treated wood blocking in conjunction with roofing including, but not limited to, cant strips, wood curbs, nailers, roof blocking and other rough lumber in conjunction with roofing and flashing.

12. Plywood on galvanized z-girt system including z-shaped girts, hat channels and other LGMF shapes, and all required fasteners at PVC roof terminations at base of vertical walls, where indicated on the drawings.

B. Install the following as shown on the Drawings and specified under the designated SECTIONS:

1. Glass fiber batt insulation at top of masonry walls at corrugated roof deck and where structural members penetrate masonry interior walls: SECTION 072100-INSULATION.

2. Rigid and semi-rigid (Mineral Wool) insulation for installation behind plywood at PVC roof terminations at base of vertical walls and where indicated on the drawings: SECTION 072100-INSULATION.

C. LEEDv4-S Requirements:

1. The work of this section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEEDv4-S Certification at "Silver" Level is an Owner Requirement that is critical to secure project funding from the Massachusetts School Building Authority. LEEDv4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.

2. For all adhesives, sealants, paints and coatings, meet the requirements for IEQ Credit 2, Low-Emitting Materials and as defined SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

3. For all composite wood and agrifiber products, meet the LEED-S requirements for IEQ Credit 2, Low-Emitting Materials and as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

4. Meet the LEEDv4-S requirements for MR Credit 2, Building Product Disclosure and Optimization – Environmental Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers' product documentation for each product having an Environmental Product Declaration (EPD).

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be performed under the designated SECTIONS:

1. Mock-up construction: SECTION 014339-EXTERIOR MOCK-UPS.

1. New roof decks: SECTION 053100-METAL DECKING.

2. Wood cabinetry and millwork, plastic laminate, wood finish, solid wood, wood veneer and trim, and MDO window sills and jambs not specified herein, and other items of finish carpentry and millwork: SECTION 062000-FINISH CARPENTRY.

3. Installation of doors and frames, application of finish hardware, and installation of toilet accessories: SECTION 062000-FINISH CARPENTRY.

4. ~~Wood framing and sheathing in conjunction with base wall roofing flashing as shown on the drawings, including specified preservative treatment there of: SECTION 070002-ROOFING AND FLASHING.~~

5. Metal fascias, metal flashings, resilient flashing, roof insulation, membrane roofing system: SECTION 070002-ROOFING AND FLASHING and SECTION 074213-PREFORMED CLADDING.

6. Field painting of MDO plywood panels at mechanical, electrical and data rooms: SECTION 090007-PAINTING.

7. Acoustic panels: SECTION 098400-ACOUSTIC WALL TREATMENT.

8. Wood finish flooring at stage and gymnasium: SECTION 096466-WOOD AND ATHLETIC FLOORING.

9. Solid tongue and groove paneling and wood veneer paneling: SECTION 062000-FINISH CARPENTRY.

10. Interior phenolic panels and z-clip support systems: SECTION 074233-PHENOLIC RAINSCREEN SYSTEM.

11. Wall mounted markerboards, prefabricated sliding markerboard units and tackboards: SECTION 101100-MARKERBOARDS AND TACKBOARDS.

12. Air and vapor barrier: SECTION 071326-AIR AND VAPOR BARRIERS.

13. Wood, plastic or metal shims for plumbing/leveling finish product or finish material: By Trade requiring same.

1.04 SUBMITTALS

A. Submit the following in accordance with the provisions of SECTION 013300-SUBMITTALS.

1. Pressure treatment of lumber - The treatment plant shall furnish a notarized certificate stating compliance with all pertinent details of this Specification.

2. Fire retardant treated lumber - The treatment plant shall furnish a notarized certificate stating compliance with all pertinent details of this Specification.

B. LEED for Schools Submittals (Refer to SECTION 013300-SUBMITTALS):

1. Relevant supporting documentation by LEED for Schools v4 as detailed in Section 018113-Sustainable Design Requirements.

2. A completed LEED MATERIALS REPORTING FORM, per Section018113-Sustainable Design Requirements.

1.05 GRADING STANDARDS AND QUALITY

A. All lumber shall:

1. Be new, dressed 4 sides (S4S), clear, and free from warping and other defects. Lumber at specified concealed ares shall be pressure treated with Wolman Salts at concealed areas.

2. Conform to U.S. Department of Commerce Simplified Practice Recommendation R-16 for sizes and use classifications.

3. Have a moisture content not exceeding 19 percent when delivered to the project, except blocking adjacent to the millwork which shall not exceed 5 percent moisture content. The Owner reserves the right to have test performed for moisture content and will pay for such test, except where the specified content is exceeded, in which case the costs of all tests made until materials conform, shall be paid for by the Contractor.

4. Be in accordance with the grading rules of the lumber manufacturer's associated under whose jurisdiction the species of lumber is produced.

B. Plywood-Conformance to American Plywood Association (APA) DFPA grade trademark and Product Standards PS-1.

C. Lumber and plywood shall be identified by the official grade mark, except where grade mark will interfere with the natural finish. In such cases, the material shall be accompanied by a certificate of inspection issued by the lumbar grading and inspection agency.

1.06 STORAGE OF MATERIALS

A. Store all materials in an elevated dry location, protected by waterproof coverings. Do not store within the building until masonry, concrete, and other such wet work has been completed and allowed to dry.

1.07 TEMPORARY BRACING

A. Provide and maintain, until such time as permanently built into the structure, all temporary bracing for door frames, sills, and other work requiring bracing and which is not specified as being provided under other SECTIONS of the Specifications.

1.08 PROTECTION AND TEMPORARY ENCLOSURES

A. Do such work as in necessary to cover and protect all finishes and other work from damage during construction. Provide and maintain temporary substantial wood handrails around all openings through floors such as stairways.

B. Refer to SECTION 015000-TEMPORARY FACILITIES AND CONTROLS for specific requirements of temporary enclosures and protection and other temporary items and perform all such work under this SECTION.

PART 2 PRODUCTS

2.00 LEEDv4-S REQUIREMENTS

A. Products and materials used for this section of the work are required to meet the following criteria for LEEDv4-S materials Credits, and a completed LEED v4 Materials Reporting Form shall be submitted for all materials in this SECTION.

1. Furnish any composite wood and agrifiber products installed inside the air and vapor barrier such that they meet the formaldehyde emissions requirements for CARB ATCM for ultra-low-emitting formaldehyde (ULEF) or no-added-formaldehyde (NAF) resins. Laminating adhesives used to fabricate on site and shop applied composite wood and agrifiber assemblies must also meet these requirements. Refer to requirements for IEQ Credit 2 as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
2. Recycled Content. (See Section 018113 Sustainable Design Requirements for overall project recycled content requirements.) The Contractor shall examine each product or material specification below for a stated minimum recycled content requirement, and if none is stated, the requirements under 018113 shall govern.
3. Regional Content. (See Section 018113 Sustainable Design Requirements for overall project regional content requirements.) The Contractor shall examine each product or material specification below for a stated minimum regional content requirement, and if none is stated, the requirements under 018113 shall govern.
4. Certified Wood (FSC). (See Section 018113 Sustainable Design Requirements for overall project FSC-Certified wood content requirements.) For the sum of all wood products in this section, a minimum of 50% FSC wood is required.
5. Furnish any paints and coatings such that they meet the requirements for IEQ Credit 2 as defined in Section 018113-SUSTAINABLE DESIGN REQUIREMENTS.
6. For all adhesives and sealants, meet the requirements for IEQ Credit 2 as defined in Section 018113-SUSTAINABLE DESIGN REQUIREMENTS.

2.01 INTENT AND WORKMANSHIP

A. It is not the intent of this Specification to hereinafter define the types, sizes or installation methods for each item of work. Methods of installation, joinery, sizes, spacing of nailers and furring strips, and other information pertaining to the lumber, plywood and other items or required work shall be installed in accordance with the details on the Drawings for the specific areas involved.

B. Work that is to be finished or painted shall be free from defects or blemishes on surfaces exposed to view that will show after the finish coat of paint is applied. Any materials which is in any way defective and not up to Specifications for quality and grade for its intended use, or otherwise not in proper condition shall be rejected. Rough lumber shall be dressed four sides, air-dried, well-seasoned, sound and free from splits, cracks, shakes and wanes, loose or unsound knots, and decay.

2.02 LUMBER AND PLYWOOD TREATMENTS

A. Preservative Treatment: All concealed-from-view nailers in conjunction with roofs and curbs and all other wood members noted on the drawings to be "pressure treated" shall be pressure-preservative treated. All other wood nailers, furring, and other concealed lumber in direct contact with masonry or concrete shall be treated by brush-coating. Brush coat all cut ends of treated lumber with two heavy coats of Penta, Woodlife, Cuprinol, or equal.

1. Pressure Treatment – Lumber and plywood specified to be "pressure treated" shall be impregnated under pressure with a paintable wood preservative of water borne type, chromated zinc chloride, chemonite, Celcure, Erdalith, Wolman Salt or equal. Minimum retention shall be .30 pounds of preservative per cubic foot of wood. Preservative shall meet APWA P-5 and Federal Standard TT-W-550. Pressure treatment process and results shall meet Federal Specification TT-W-571 and AWPA Conformity Standards.
2. Brush Treatment – Penta, Cuprinol, Woodlife, or approved equal, applied in two heavy coats, prior to installation of lumber on all surfaces.

B. Fire Retardant Treatment: All lumber and plywood for framing and blocking and as otherwise designated on the Drawings to be fire retardant treated, shall be pressure impregnated with FLAME PROOF LHC by Osmose Wood Preserving, Inc. or approved equal to comply with the requirement for a flame spread of 25 or less with no evidence of significant progressive combustion when tested for thirty minutes duration under the Standard Test Method for surface burning characteristics of building materials (ASTM E-84, NFPA 225, UL 723 and AWPA C-20 and C-27). Each piece of wood shall bear the mark of an accredited testing agency such as the Underwriters Laboratories label, indicating compliance with the flame spread classification.

C. After treatment, all lumber shall be kiln dried to an average moisture content of 19 % or less, and all plywood shall be dried to an average moisture content of 15 % or less.

D. Exterior fire-retardant pressure treated plywood shall be formulated to both meet flame spread of 25 or less (ASTM-E-84) and provide protection for applications exposed to the weather: “Exterior Fire-X”, by Hoover Treated Wood Products or equal.

2.03 ROUGH CARPENTRY MATERIALS

A. Wood framing, blocking, and other lumber of actual 1-1/2 inches (2 in. nominal) or greater dimension – Southern Pine No. 2 or better in sizes as indicated on drawings.

1. **Wood blocking for attachment of all wall and ceiling mounted items shall be a full 1 ½ inches (2 in. nominal) thickness.**

B. Furring, nailers, and other lumber of less than 1-1/2 inches (2" nominal) in dimension – No. 2 spruce or pine.

C. Interior Plywood – C-C EXT-APA, unsanded of thickness indicated on the Drawings except where exposed to view where grade A-C EXT-APA shall be used.

D. Fire retardant interior plywood where plywood substrate is called for on the Drawings at circulation spaces: ramp, passage, corridor, lobby and vestibules.

E. Exterior Plywood – C-C EXT-APA, unsanded, of thickness indicated on the Drawings.

F. Medium Density Overlay (MDO) plywood for surface mounting of electrical panelboards, data/communications and other MEPFP wall mounted equipment for painted finish.

G. Bolts and fastenings:

1. Non-specified nailers and blocking in excess of 7/8 inches thick, 3/8-inch diameter, unless otherwise indicated on the Drawings, galvanized steel anchor bolts or expansion bolts, as applicable, of sufficient length to penetrate masonry or concrete a minimum of six inches. Space bolts not more than 12 inches on center and stagger the lines of bolts as far as practicable.
2. Bolts for lumber and furring 7/8 inches actual thickness and less - Galvanized steel bolts at least 1/4 inch in diameter, of the most appropriate types and lengths for the particular application and provided with all required galvanized washers and nuts.
3. All flush framed connections shall have beam or joist hangers.

H. Exterior wall and roof sheathing (veneered plywood).

1. Pressure treated sheathing as noted on the drawings.
2. Fasteners – Refer to structural drawings for fastening requirements.

I. Adhesives: Where used, all adhesives shall comply with LEEDv4-S IEQ Credit 2 for VOC content. Refer to SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

2.04 MISCELLANEOUS MATERIALS

A. Install rigid and semi-rigid thermal insulation provided by SECTION 072100-INSULATION behind 1/2 inch PT plywood at the base of vertical walls at PVC roofing terminations, as shown on the drawings. Insulation shall match the insulation provided in the cavity of masonry veneer, metal panel, phenolic panel and cement fiber panel walls.

B. Miscellaneous Framing Component, General: Cold-formed metallic coated steel sheet, ASTM C 645, Grade 50, with ASTM A 653/A 653M, G90 (Z180) hot-dip galvanized zinc coating.

1. Z-girts: 0.053 inch / 16 ga. (1.34 mm) minimum.
2. Hat Channels: 0.053 inch/16 ga. (1.34 mm) minimum.
3. Sill Channels: 0.053 inch/16 ga. (1.34 mm) minimum.
4. Other Required Shapes: 0.053 inch/16 ga. (1.34 mm) minimum.

PART 3 EXECUTION

3.01 GENERAL

A. Framing, nailers, blocking and furring - Refer to the Drawings for the various conditions. Install items with specified fastenings, shimming as the work progresses, to assure smooth and level surfaces for proper receipt of materials to be attached thereto. Countersink all heads of fasteners in all locations where another finish material will be directly applied to furring, nailers and blocking. Furnish and install all beam and joist hangers and similar accessories, as shown on the Drawings and required for a complete installation.

B. All construction, including framing and fire stopping shall be performed in accordance with the requirements of the Commonwealth of Massachusetts State Building Code, except where the work indicated on the Drawings exceeds the requirements of the Code. Where the Drawings indicate work in excess of minimum Code requirements, the work shall be done according to the Drawings.

C. Brush treat all field cuts of treated wood with preservative.

D. Be thoroughly familiar with all sections specifying wall and ceiling mounted items. Install wood blocking within wall and ceiling construction for attachment of all wall and ceiling mounted items.

END OF SECTION

SECTION 062000

FINISH CARPENTRY

PART 1 GENERAL

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish and install the following, as shown on the Drawings and specified herein:

1. Prefinished custom fabricated millwork and standard cabinetry as shown on the Drawings, including but not limited to: base, upper and tall cabinets, classroom storage wall millwork, administration reception desk, media center circulation desk, mailbox units, project area locker enclosures, project area seat, tack and dry erase surface low height dividers, benches, display, tack and seating cabinetry, countertops with side and back splashes, and all necessary hardware.
2. Shelving, fixed and adjustable, with metal standards, brackets, and hardware.
3. Prefinished veneer panels, veneer core plywood, with solid edge-banding, for all new plywood surfaces and millwork construction noted on the drawings to be "hardwood veneer plywood" or "hardwood plywood" for natural finish.
4. Prefinished solid hardwood for all new millwork, sills, trim, tongue and groove paneling, backsplashes at engineered stone counters and other items noted on the drawings as "hardwood" or “prefinished hardwood.”
5. Solid poplar wood trim and MDO plywood where designated on the Drawings to be field painted.
6. Lockable display cases, including shelf supports, glass doors, glass shelves, tack surfaces, and all required hardware.
7. Wood risers, treads and apron at cafeteria platform (stage).
8. Wood benches at Cafeteria, Main Lobby and Media Center.
9. Perimeter shelving and storage cabinets at Media Center.
10. Recycled glass engineered stone countertops with solid hardwood splashes at main administration counters, library circulation counter and other surfaces and locations as shown on the Drawings.
11. Plastic laminate surfacing for counters, backsplashes and millwork where noted.
12. Epoxy countertop and splash in Art Room.

13. Butcher block countertop in Custodian Workshop.

14. Linoleum resilient tack surface and backer panel when called for on the Drawings at display cases and other wall surfaces.

15. Magnetic dry erase porcelain white board surface, particle board backing and vapor barrier where integrated into the millwork as noted.

16. Shims for plumbing and leveling items furnished and/or installed herein.

17. Custom fabricated, prefinished sliding “barn” doors including installation of all associated sliding tracks, guides and recessed hand pulls.

18. Sealant and caulking at backsplashes and between millwork (standing and running trim, fillers, panels and cases) and other dissimilar materials.

19. All of the work of SECTION 062000-FINISH CARPENTRY in all egress, and egress access (circulation) spaces; corridors, project areas, lobbies, vestibules, stairs and the spaces that are contiguous to them (not separated by doors) shall be CLASS B rated.

20. Fire treated wood blocking, grounds, cleats and shims as shown on the Drawings in this Section and fire treated plywood core for veneered surfaces in corridors, project areas, lobby and stairs.

21. Colored putty for filling nail holes.

22. Expansion anchors for free standing millwork at concrete slabs not otherwise attached to walls and/or overhead soffits and where noted on the Drawings.

23. All other items designated “millwork” and “casework” or “BY SECTION 062000-FINISH CARPENTRY” on the Drawings.

24. Miscellaneous hardware including but not limited to flag brackets designated “BY SECTION 062000-FINISH CARPENTRY” on the Drawings.

B. Install all new wood doors, metal doors and frames, and finish hardware, as furnished under SECTION 081113-HOLLOW METALWORK, SECTION 081416-WOOD AND PLASTIC DOORS, and SECTION 087100-FINISH HARDWARE, respectively, except as otherwise specified hereunder.

C. Install toilet accessories so specified and furnished under SECTION 102813-TOILET AND BATH ACCESSORIES.

D. Install designated toilet accessories as furnished by the Owner.

E. Secure tall bookcases, as provided under separate contract by the Owner to walls in Literacy Library.

F. Install linear aluminum grilles for venting millwork benches and sills as furnished under SECTION 230001-HVAC.

G. LEEDv4-S Requirements:

1. The work of this SECTION includes material and submittal requirements for fulfillment of project LEEDv4-s certification. LEEDv4-s certification at "Silver" level is an Owner requirement that is critical to secure funding from the Massachusetts School Building Authority. LEEDv4-s requirements for the work of this SECTION are detailed herein, and additionally in Division 1 of the Project Manual.
2. For all adhesives and sealants, meet the requirements for IEQ Credit 2 as defined in SECTION 018113 - SUSTAINABLE DESIGN REQUIREMENTS.
3. For all composite wood and agrifiber products, meet the requirements for IEQ Credit 2 and as defined in SECTION 018113 - SUSTAINABLE DESIGN REQUIREMENTS.
4. For all paints and coatings, meet the requirements for IEQ Credit 2 as defined in SECTION 018113 – SUBSTAINABLE DESIGN REQUIREMENTS.
5. For ceiling and wall systems, including gypsum board products, insulation products, acoustical ceiling systems and wall coverings installed in the building interior (e.g., tackable surfaces), meet the requirements for IEQ Credit 2 as defined in SECTION 018113 - SUSTAINABLE DESIGN REQUIREMENTS.
6. Materials Credit Certified Wood: For all new wood, provide itemized invoices showing wood that is FSC certified and wood that is not. Invoices that include FSC certified wood shall show the vendor's Chain of Custody Certificate number on them. Submit Millwork shop FSC certifications associated with each invoice, to provide complete chain of custody for FSC wood.
7. Meet the LEEDv4-S requirements for MR Credit 2, Building Product Disclosure and Optimization – Environmental Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers' product documentation for each product having an Environmental Product Declaration (EPD).

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following work is to be performed under the designated SECTIONS:

1. Rough blocking, furring, nailers, plywood sheathing, and other items of rough carpentry: SECTION 061000-ROUGH CARPENTRY.
2. Woodgrain phenolic panels: SECTION 074233-PHENOLIC RAINSCREEN SYSTEM.
3. Aluminum sliding doors at administration desk and bulletproof transaction window: SECTION 080001-METAL WINDOWS.
4. Furnishing and installation of glass at interior wood and hollow metal doors and lites: SECTION 080002-GLASS AND GLAZING.

5. Engineered quartz stone thresholds, jambs and heads adjacent to ceramic tile: SECTION 090002-TILE.

6. Field painting of designated solid Poplar and MDO veneered plywood: SECTION 090007-PAINTING.

7. Wood finish flooring: SECTION 096466-WOOD AND ATHLETIC FLOORING.

8. Prefabricated markerboards, tackboards and prefabricated sliding markerboard units including maprails with flag holders: SECTION 101100-MARKERBOARDS AND TACKBOARDS.

9. Metal lockers in project areas: SECTION 105113-LOCKERS.

10. Outlets at cabinetry and light fixtures mounted on or below wall cabinets, on top of project area lockers, and in display cases: SECTION 260001-ELECTRICAL.

1.04 SUBMITTALS

A. Submit complete shop drawings in accordance with the requirements of SECTION 013300-SUBMITTALS.

B. Include large-scale fabrication details and joinery of finish carpentry items furnished hereunder, elevations showing the direction of grain and all fabricated joints and a schedule and cuts of hardware therefore.

C. Make actual field measurements of all condition receiving millwork and shelving and include such dimensions on shop drawings. Dimensions indicated on the Contract Drawings, therefore, will be subject to minor corrections.

D. Submit the following samples in accordance with the requirements of SECTION 013300-SUBMITTALS.

1. Provide an affidavit confirming that all samples submitted comply with the specified AWI Architectural Woodwork Standards for Premium Grade as classified and characterized by Architectural Woodwork Standards, Section 4 – Sheet Products and factory finished veneer panels comply with Section 5 – Finishes, Prefinished Work.

2. Solid Wood and Plywood – 4 x 12 x ¾ inch of solid wood and 24 x 24 x ¾ inch of plywood core veneer in each species proposed for use, with designation of locations to be used. Samples shall be representative of the full range (extremes of light and dark) of the material proposed to be used.

3. MDF Plywood for Exposed Shelving – 24 x 24 x 1 inch of MDF veneer core with ¼ inch solid wood edge banding (all four edges) at adjustable shelves in each species proposed for use, with designation of locations to be used. Samples shall be representative of the full range (extremes of light and dark) of the material proposed to be used.

4. MDF Plywood for Concealed Shelving in Base and Wall Cabinets – 24 x 24 x ¾ inch of MDF veneer core with ¼ inch solid wood edge banding (all four edges) at adjustable shelves in each species proposed for use, with designation of locations to be used. Samples shall be representative of the full range (extremes of light and dark) of the material proposed to be used.
5. MDO (medium density overlay panel): 12 in. x 12 in. x ¾ in.
6. Hardware: One sample each of the following:
    a. Wire pull
    b. Lock
    c. Shelf support
    d. Coat hook
    e. Grommet
    f. Nametag holder
    g. 3 ft. length of shelf standard and one bracket
    h. Flag bracket
7. Plastic Laminate – Manufacturer's standard sample chains including complete line of solid colors, patterns and wood grains.
8. Engineered Recycled Glass and Quartz Stone – Manufacturer's samples of complete line of available colors.
9. Stain Finish – Provide min. 4 in. x 4 in. stained samples of tongue and groove quarter sawn red oak solid wood in five approximations of chosen phenolic panel color.
10. Roll Tack Surface – Manufacturer's samples of complete line of available colors, not smaller than 1 in. x 2 in. Upon request, provide larger samples of 12 in. x 12 in. of up to (2) colors.
11. Caulking manufacturer's card with full line of standard colors.
12. Dry Erase Surface, Backing and Moisture Barrier – Manufacturer's sample not less than 12 in. x 12 in. demonstrating a full example of steel spline butt joint.
13. Mock-ups:
    a. Tongue and Groove Panel System – After approval of submitted samples and choice of stain, provide minimum 2 ft. x 2 ft. x 2 ft. mock-up of tongue and groove panel system including 4" recessed VCB base and mitered 90° corner. Mock-up shall be constructed and finished per the requirements of this Section and, once approved, be retained and used as the standard of quality for the project.
    b. Sample Classroom – Provide all millwork in sample classroom. Revise if modifications are required. Once approved, millwork in mock-up classroom may become part of the work.

E. LEED for Schools Submittals (Refer to SECTION 013300-SUBMITTALS):

1. Relevant supporting documentation by LEED for Schools v4 and as detailed in Section 018113-SUSTAINABLE DESIGN REQUIREMENTS.
2. A completed LEED MATERIALS REPORTING FORM, per Section 018113-Sustainable Design Requirements.
3. Product substitution requests are subject to additional LEEDv4-S submittal requirements, see SECTION 012500-SUBSTITUTION PROCEDURES.

1.05 WORKMANSHIP AND QUALITY STANDARDS

A. General – Refer to the Drawings for details of new finish, trim, and millwork items.

1. Shelving, millwork, finish and trim shall conform to design and detail as shown. Where practicable, work shall be finished and assembled at the mill.
2. All millwork and trim shall be furnished smooth and free from all machine and tool marks that may show through the finish. Nails used to fasten finish work shall be set to receive putty or wood filler.
3. All joints shall be tight and formed to conceal shrinkage. Miters 4 inches or more from heel to point shall be glued.
4. Finish shall be made in as long lengths as possible and jointed only where solid fastenings can be made.

B. Quality Standards – The quality standards of the Architectural Woodwork Institute (AWI) Architectural Woodwork Standards, latest edition for PREMIUM GRADE are hereby made a part of this SECTION 062000.

1. All materials and workmanship shall conform to the requirements for premium grade set forth herein.

2. Conform to the stricter requirements specified herein and shown on the Drawings, which include but are not limited to:

a. Prohibition of glue up for width at certain feature elements where finish width exceeds AWI standards.

~~b.~~

C. Material References – The references to the various wood panel products used herein shall be as classified and characterized by Architectural Woodwork Institute Architectural Woodwork Standards, latest edition, Section 3 – Lumber, Section 4 - Sheet Products and Section 5 – Finishes and other Sections as applicable.

PART 2 PRODUCTS

2.00 LEEDv4-S REQUIREMENTS

A. Products and materials used for this section of the work are required to meet the following criteria for LEEDv4-S materials Credits, and a completed LEEDv4 Materials Reporting Form shall be submitted for all materials in this SECTION:

1. Recycled Content. (See Section 018113 Sustainable Design Requirements for overall project recycled content requirements.) Contractor shall examine each product or material specification below for a stated minimum recycled content requirement, and if none is stated, the requirements under 018113 shall govern.
2. Regional Content. (See Section 018113 Sustainable Design Requirements for overall project regional content requirements.) Contractor shall examine each product or material specification below for a stated minimum regional content requirement, and if none is stated, the requirements under 018113 shall govern.
3. Rapidly Renewable Content. (See Section 018113 Sustainable Design Requirements for overall project rapidly renewable content requirements.) Contractor shall examine each product or material specification below for a stated minimum rapidly renewable content requirement, and if none is stated, the requirements under 018113 shall govern.
4. Certified Wood (FSC). (See Section 018113 Sustainable Design Requirements for overall project FSC-Certified wood content requirements.) For the sum of all wood products in this section, a minimum of 50% FSC wood is required.
5. Furnish any composite wood and agrifiber products such that they meet the formaldehyde emissions requirement for CARB ATCM for ultra-low-emitting formaldehyde (ULEF) or no-added formaldehyde (NAF) resins. Laminating adhesives used to fabricate on-site and shop applied composite wood and agrifiber assemblies must also meet this requirement. Refer to the requirements for IEQ Credit 2 as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
6. Furnish any adhesives and sealants such that they meet the requirements for IEQ Credit 2 as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
7. Furnish any paints and coatings such that they meet the requirements for IEQ Credit 2 as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
8. Furnish ceiling and wall systems, including gypsum board products, insulation products, acoustical ceiling systems and wall coverings installed in the building interior (e.g., tackable surfaces), such that they meet the requirements for IEQ Credit 2 as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

2.01 FINISH, TRIM AND MILLWORK MATERIALS

A. General – Materials required for items of new cabinets, finish trim, shelving, and millwork shall be as follows. (Note: Materials to receive natural finish and stain finish shall be **pre-finished**):

1. Solid Hardwood (except 4 in. tongue and groove panels): Quarter Sawn **Red Oak**, AWI grade I, with matte clear coat finish.
2. Solid Hardwood for 4 in. Tongue and Groove Panels: Quarter sawn **Red Oak** AWI grade 1 with stain and clear matte finish.
3. Hardwood Veneer Plywood: Rift Cut **Red Oak** veneer plywood, book matched AWI Grade AA with matte clear coat finish. Core shall be medium density fiberboard (MDF) as specified for the particular application. Plywood shall conform to all standards for Premium Grade.
4. Poplar: Yellow poplar, AWI grade II, to be field painted, except as noted "factory finish" on the Drawings.
5. Medium Density Overlay (MDO) plywood with resin-impregnated with Grade B face and backer veneers for field paint finish.
6. Solid Hardwood for Platform Treads & Risers: Select White Maple, plain sawn, AWI grade I, for natural finish. Glue-up is permitted per AWI standards to achieve required widths. All component boards shall be well matched for color and grain.

B. Panel products for the construction of cabinets, counters and other finish carpentry items shall be as follows:

1. Cabinet Doors and Drawer Fronts:
   a. For doors and drawer fronts with stain and clear matte finish: Medium Density Fiberboard (MDF) with hardwood "AA" **Red Oak** face veneer on exposed side and "B" **Red Oak** back veneer on concealed side with solid **Red Oak** hardwood 1/8 inch edge banding on all exposed edges. Wood grain shall run in direction shown on the Drawings.
   b. For doors and drawers with plastic laminate finish: MDF with same grade plastic laminate on all six surfaces.
2. Base, Overhead and Tall Cabinet Carcass:
   a. Clear Matte Finish Cabinets:
      1) Panels exposed to view on the outside of cabinet: MDF with hardwood **Red Oak** veneer on exposed surface and plain sawn on concealed side, and solid **Red Oak** hardwood 1/8 inch edge banding on all exposed edges.
      2) Face frames and any exposed door stops or trim: Solid **Red Oak** hardwood, Quarter Sawn.

3) Panels not exposed to view: Particle board with melamine, color as selected by Architect unless shown on Drawings to be natural finish.

b. Plastic Laminate Finish Cabinets

1) All panels except backs and bottoms: Medium Density Fiberboard (MDF) with melamine finish inside cabinet and plastic laminate on all surfaces visible from outside the cabinet. Backs and bottoms MDF or Medium Density Particleboard (MDP) with melamine finish. Melamine color as selected by Architect.

3. Shelving inside (concealed) enclosed base and overhead wall cabinets:

a. Clear Coat Cabinets: MDF with **Red Oak** veneer and solid **Red Oak** 1/8 inch edge banding.

b. Fixed Shelving: Fixed shelving for all uses other than inside enclosed cabinets shall be one-inch thick Medium Density Fiberboard (MDF) veneer core with 1/8 inch edge banding at exposed edge.

c. Adjustable Shelving: Adjustable shelving shall be one-inch thick Medium Density Fiberboard (MDF) core with Red Oak veneer with 1/8 inch edge banding at **all** four edges.

d. Plastic Laminate Shelving: Shelving with plastic laminate shall be plastic laminate on all six exposed surfaces.

4. Plastic Laminate Cabinets shall be MDF with plastic laminate on all six (6) surfaces.

5. Countertops:

a. Countertops with sinks: Phenolic resin particleboard. Counters installed over base cabinets shall be one layer of ¾ inch material with laminate balancing sheet under counter.

b. Counters and work surfaces without sinks: Medium Density Particleboard. Counters over base cabinets shall be one layer of ¾ inch material with laminate balancing sheet.

c. All countertops not installed over base cabinets shall be a minimum of two layers of ¾ inch material.

d. Epoxy Countertops at Art Rooms: Tops shall be one inch thick molded from a modified epoxy resin, color black, by Kemresin, Prime, Durcon or equal.

e. Butcher Block Benchtops: Tops shall be kiln dried, 2-1/4 inch thick Maple, electronically glued, cured and sanded with an eased edge. Tops shall be finished with a penetrating mineral oil product.

6. Engineered Recycled Glass and Stone Countertops: To establish a level of color, quality and design, countertops shall be engineered stone incorporating recycled glass as manufactured by Curava, Merrimack, NH. Other products of comparable quality and color by EOS, Polycor, Inc. or an approved equal may be considered for approval by the Architect upon receipt of adequate data and sample. Countertops to be 1 ¼ in. thick unless otherwise noted. Backsplashes shall be ¾ in. thick unless otherwise noted.

   a. Basis of Design: Curava, Arctic Blue Polished finish.

7. Plastic Laminate: General Purpose (HGS) for horizontal surfaces: 0.044-0.048 inch thick, and Vertical Surface (VGP) for vertical surfaces: 0.028 inch thick at cabinet walls, doors & drawers shall be high-pressure laminates, meeting or exceeding the performance standards of NEMA, Class I, in a low, non-directive texture in solid colors, patterns and wood grains as indicated: "plastic laminate" on the drawings. Laminates shall be chosen by Architect from Wilsonart, Nevamar, Pionite or Formica lines. Provide balancing sheet of the same thickness of plastic laminate for all plastic laminate surfaces. Interior surfaces of cabinets with doors shall receive low-pressure (melamine) surfacing material.

8. Cement – For application of laminated plastic: 3M Brand Fastbond 10 or approved equal that is LEEDv4-S compliant adhesive.

9. Glue: For lamination and fabrication of wood and plywood items - Exterior Grade, phenolic resin glue that is LEEDv4-S compliant adhesive.

10. Nails: For finish and trim items - 6D or 8D coated or galvanized finish nails.

11. Screws: Flathead galvanized or stainless steel wood screws, of the appropriate size.

12. Panel Adhesive: as recommended by manufacturer that is LEEDv4-S compliant adhesive.

13. Tack Surface: Linoleum resilient tackable surface material, "Bulletin Board" as manufactured by FORBO Linoleum, Inc. Hazeton, PA, Industrial Acoustics Co., Polyvision, Inc. or an approved equal as determined by the Architect. Tack surface material shall be of natural materials consisting of linseed oil, granulated cork, resin binders and dry pigments mixed and calendared onto a natural burlap backing. Color shall extend throughout the ¼-inch thickness of material. Full range of colors for Architect's selection.

   a. Where shown on the drawings, tack surface to be laminated to molded, recycled post-consumer paper cellulose fiber structural panel. Panels used in egress corridors (project areas) shall be class A fire rated.

14. Magnetic Dry Erase Surface: Porcelain enameled steel on 7/16 MDF with adhered moisture barrier as manufactured by Claridge (frameless). Panels shall be supplied in maximum available sizes, up to 5 ft. x 16 ft. Where required, joints shall be steel spine butt joints.

   a. Face Sheet: Vitreous porcelain enamel nonporous, stain resistant writing surface on 24 gauge LCS markerboard. Surface shall be "low gloss".

b. Core Material: 7/16 medium density fiberboard.

c. Panel Backing: .005 inch aluminum foil for panels.

15. Adjustable Metal Non-Slip Shelf Supports: 5 mm steel spoon supports with angles on seat to receive kerf in shelf, nickel plated, Model 282.04.711 as manufactured by Hafele. Similar anti-slip spoon shelf supports by US Futaba, Inc. Model 7211152024, ROK Model ROK5P5NSTOP or an approved equal as determined by the Architect.

C. 4 in. Nominal Tongue and Groove System:

1. Quarter sawn red oak tongue and groove panels, fabricated as shown on the Drawings.

2. Tongue and groove panels shall be milled to provide 3 5/8 in. high outer face and leave 3/8 in. high x ¼ in. deep reveal such that assembled board remain on 4 in. module.

3. Starter (as base) and cap (top) boards shall be fabricated without tongue and groove as shown on the Drawings.

4. Tongue and groove panels shall be blind nailed except at starter and cap boards, mitered corners and above and below projecting millwork installations. All finish face nails shall be set and puttied.

5. Tongue and groove planks shall be in prefinished stain finish.

6. Seams between the component boards of glued-up tongue and groove panels, when required, shall be located in the area of the tongue / reveal such that the 3-5/8 in. exposed outer face is comprised of one board.

D. Solid hardwood frames of “cube” elements shall be quarter sawn red oak with a clear factory applied finish. Cube elements include display cabinets, seats, transaction counter surround and lobby interactive feature wall.

1. Provide 6 in. wide boards in maximum practical lengths with no board less than 4 ft.-0 in. long. Where multiple boards are required for lengths over 8 ft., boards shall be well matched for color and grain. All such joints shall be as indicated on the approved shop drawings.

2. No glue-up for width shall be permitted for “cube” frames.

3. Detail cube elements with best practices to prevent cupping and bowing including but not limited to: relief cuts and backing out of wide boards.

E. Miscellaneous Materials:

1. Grommets: Plastic grommets at all countertops shall be 2 ¾ inches in diameter with inserts and top covers. Color to be selected by the Architect. Locations shall be coordinated in the field with the Architect. Assume four (4) grommets per 10 linear feet of countertops.

2. Latex Based Caulking: Pecora Acrylic Latex Caulk AC 20, Tremco Tremflex 834, Bostik Findley Chem-Caulk 600 or an approved equal, in colors as selected by the Architect.

3. Putty: Wood putty in colors compatible to the light and dark grains for each wood species.

4. Expansion Anchors: ½ in. min. diameter x 5 in. min. length (or as required for the application).

2.02 HARDWARE FOR MILLWORK, SHELVING, AND PARTITION WORK AND MISCELLANEOUS HARDWARE

A. General – Refer to the Drawings for various new millwork, shelving, and partition, and provide all hardware therefore. Unless otherwise noted, finish of all exposed-to-view hardware shall be US26D. All hardware shall be as specified on the Drawings, or approved equal.

1. All doors and drawers shall have keyed locks that are keyed alike, keying schedule to be provided by the Architect.

B. Hardware and Accessories – To establish a level of quality, design and function, Drawings are based on products by manufacturers listed in the schedule shown on the Drawings. Hardware by other manufacturers will be considered for approval as an equal by the Architect upon receipt of adequate supporting data and samples.

C. Miscellaneous Hardware:

1. Flag Holders: To establish a level of quality, design and function, flag holders are based on Annin & Co. Item # 642600: 45° cast aluminum in natural finish flag mounting bracket for ¼ in. to ½ in. dowels. Flagpole holders by other manufacturers will be considered for approval as an equal by the Architect upon receipt of adequate supporting data and samples.

a. Provide flag holders at a rate of one per room at all "teaching spaces" including Kindergarten, Pre-K, Rise, Rise Jr., Classrooms, CUBS, ISN, Music, NAS, Literacy Library, Language Based Program, STE/ Engineering.

b. Flags and rods N.I.C.

2.03 PREFINISH WORK

A. Factory finished millwork shall be in accordance with AWI Division 1500-S-4-Finish System Standards for 'Premium Grade'. Factory finish shall be ultraviolet (UV) cured polyurethane to comply with EPA Title 5 guidelines for Volatile Organic Compound (VOC) emissions limitations. Finish shall meet or exceed performance standards of TR-6 catalyzed polyurethane. Millwork shall be furnished with a clear matte finish at all areas except the 4 in. tongue and groove panels. 4 in. tongue and groove panels shall be furnished with a stained finish and matte clear top coats. Paste filler shall be applied per AWI standards between washcoat and sealer.

B. Stain shall be Minwax Gel Stain or equal. Stain shall be custom mixture of one or more manufacturers' full line of available colors to achieve color and tone of phenolic panels.

C. Touch-up all field cuts and imperfections with stain and polyurethane to match pre-finished surfaces.

2.04 GLASS DOORS AND SHELVES FOR DISPLAY CASE

A. Clear Tempered Safety Glass – Minimum 3/8 inch, heat tempered, annealed, polished clear float glass, PPG Herculite, LOF Tuf-Flex, ASG TRU-TEMP, or approved equal. Edges shall be "pencil" ground where glass panel and door edges are frameless.

B. Glass Door Hardware – Labora Series sliding glass door fittings as manufactured by Hafele, or approved equal. Furnish and install all glass retainers, track runners, pulls and locks required for a complete installation. Locks shall be integrated in the bottom hardware track and rail. No glass mounted ratchet type locks are permitted.

2.05 CUSTOM BARN DOORS

A. General: Custom barn doors shall comply with all requirements for lumber core, wood flush doors in SECTION 081416-WOOD AND PLASTIC DOORS.

B. Door leaves shall be 1 ¾-inch thick in size shown on the Drawings.

C. Provide rift cut red oak veneers conforming to the veneer requirements of paragraph 2.01.A.3 of this Section. Veneers shall be applied in the direction shown on the Drawings to both sides of each panel.

D. Provide solid quarter sawn oak conforming to paragraph 2.01.A.1 of this Section for both side stiles of each panel. Provide minimum 1 1/8-inch top and bottom stiles in compatible hardwood.

E. Door leaves shall be prefinished per Article 2.03 of this Section.

F. Provide 1/8-inch wide x 1/16-inch deep reveals as shown on the Drawings. Reveals shall have shop-applied matte black paint finish.

2.05 FIRE-RETARDANT-TREATED MATERIALS

A. General: Where fire-retardant-treated materials are indicated, use materials complying with requirements in this Article, that are acceptable to authorities having jurisdiction, and with fire-test-response characteristics specified.

1. Do not use treated materials that do not comply with requirements of referenced woodworking standard or that are warped, discolored, or otherwise defective.

2. Use fire-retardant-treatment formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.

3. Identify fire-retardant-treated materials with appropriate classification marking of UL, U.S. Testing, Timber Products Inspection, or another testing and inspecting agency acceptable to authorities having jurisdiction.

B. Fire-Retardant-Treated Lumber and Plywood by Pressure Process: Comply with performance requirements of AWPA C20 (lumber) and AWPA C27 (plywood). Use the following treatment type:

1. Mill lumber before treatment and implement special procedures during treatment and drying processes that prevent lumber from warping and developing discolorations from drying sticks or other causes, marring, and other defects affecting appearance of treated woodwork.
2. Kiln-dry materials before and after treatment to levels required for untreated materials.

C. Mill lumber before treatment and implement special procedures during treatment and drying processes that prevent lumber from warping and developing discolorations from drying sticks or other causes, marring, and other defects affecting appearance of treated woodwork.

1. Kiln-dry materials before and after treatment to levels required for untreated materials.

D. Fire-Retardant Particleboard: Panels complying with the following requirements, made from softwood particles and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 25 or less per ASTM E 84.

2.06 LATEX BASE CAULKING MATERIALS

A. Materials

1. Caulking Material and Siliconized Acrylic Latex Caulk/Sealant – Pecora Acrylic Latex Caulk AC-20+, Tremco Tremflex 834 Caulk, Bostik Findley Bosti-Flex Plus, or equal, in colors as selected by the Architect, from manufacturer's full line of colors.
2. Primer – Of a type as recommended by the manufacturer of caulking material and shall be non-staining.

PART 3 EXECUTION

3.01 FABRICATION AND INSTALLATION OF NEW MILLWORK AND SHELVING

A. Except as otherwise specified hereunder, fabricate and install all work in strict accordance with the workmanship standards set forth in the A.W.I. Quality Standards Premium Grade, Section 200, 400, 500, and 600 and the approved shop drawings.

3.02 FABRICATION AND INSTALLATION OF WOOD TRIM

A. Fabricate and install all standing and running trim in accordance with the workmanship standards set forth in the A.W.I. Quality Standards Section 300 for Premium Grade, and the approved shop drawings.

3.03 INSTALLATION OF PRESSED STEEL FRAMES

A. Erect all pressed steel frames, furnished under SECTION 081113, in accordance with the approved shop drawings and frame schedule. Anchor clips for frames in metal stud partitions shall be secured to studs by the drywall construction erector.

B. Provide rigid temporary bracing for frames to ensure maintenance of positioning, and remove only after frames have been permanently anchored.

3.04 HANGING AND FITTING OF DOORS AND METAL SIDELIGHT PANELS

A. Receive, store and be responsible for hardware as furnished under SECTION 087100-FINISH HARDWARE.

B. Fit all hinged doors to their respective openings. Install metal sidelight panels as indicated on the Drawings.

C. Install fire rated and non-rated doors in accordance with NFPA 80, manufacturer's instructions, and UL and Massachusetts Building Code requirements. Warped, bowed and cup in wood doors shall not exceed 1/4 inch over a 36 inch x 84 inch surface.

D. Fit all hardware accurately, from templates supplied with hardware apply securely, and adjust carefully.

E. Should pre-finished wood doors require cutting or re-machining, seal exposed surfaces with two brush coats of oil base polyurethane or varnish before hanging.

F. Prior to Substantial Completion of the Contract, and before building is occupied, inspect entire building with Architect, to ensure that each piece of finish hardware is undamaged and in perfect order and that the proper key for each lock is identified.

3.05 INSTALLATION OF ADJUSTABLE SHELVING IN MILLWORK

A. Adjustable shelving ends at shelf supports shall be kerf cut to receive angles anti-slip fin of metal shelf supports.

3.06 FABRICATION AND INSTALLATION OF ALL MILLWORK, CABINETS AND PANELING

A. The fabrication and installation of all wood and plastic laminate paneling shall be "premium grade" as defined by AWI Eighth Edition: "Architectural Woodwork Quality Standards."

3.07 INSTALLATION OF TOILET ACCESSORIES

A. Perform installation of accessories furnished under SECTION 102813-TOILET AND BATH ACCESSORIES including scheduled Owner-furnished items, in accordance with the templates and instructions furnished by the accessory manufacturer. Refer to the Drawings for various locations.

B. Perform installation of Owner provided toilet accessories including toilet paper, soap and paper towel dispensers in accordance with templates and instructions, furnished by the vendor. Refer to the Drawings for locations.

3.08 INSTALLATION OF SOAP AND PAPER TOWEL DISPENSERS

A. Perform installation of Owner provided soap and paper towel dispensers at sinks in classrooms and elsewhere where noted at sinks outside of toilet rooms in accordance with templates and instructions furnished by the vendor.

3.09 SECURING OF N.I.C. TALL BOOKCASES IN LITERACY LIBRARY 147

A. Secure tall bookcases as shown on sheet 5.9.02 to in-wall blocking (provided by SECTION 061000-ROUGH CARPENTRY). Bookcases procured and placed fully assembled in room with all necessary mounting clips / straps under separate contract (N.I.C.). Each of up to 12 bookcases will be secured requiring a maximum of four screws. Screws of appropriate length and appropriate to in-wall blocking shall be provided under this Section.

3.10 INSTALLATION LATEX CAULKING MATERIALS

A. Thoroughly clean all joints, removing all grease, dust and other foreign materials which will prevent proper adhesion. Apply masking tape to each exposed surface of joints.

B. After cleaning, and if so recommended by the materials manufacturer, apply primer to all joint surfaces, taking care not to stain adjacent surfaces.

C. Apply caulking material in joint using a hand caulking gun or power gun with a gun nozzle of proper size and sufficient pressure to completely fill joints. The depth of sealant and caulking materials shall be in accordance with the recommendations of the materials manufacturer for the specific joint function but in no case shall exceed 5/8 inch depth, nor be less than 1/8 inch. Tool with a dry or water-wet tool only. Do not use detergents or soapy water for tooling operations. Joints shall be given a slight concave surface. Remove masking tape immediately after tooling and/or before caulking material has taken initial set.

3.11 FINAL INSPECTION

A. Just prior to completion of all work under this SECTION 062000, the General Contractor, with the Architect, shall inspect all portions of the work and shall make any required adjustments or corrections to the work.

END OF SECTION

Division 7
Thermal and Moisture Protection

SECTION 070001

WATERPROOFING, DAMPPROOFING AND CAULKING

*(Filed Sub-Bid Required)

PART 1 GENERAL

1.00 TIME, MANNER AND REQUIREMENTS FOR SUBMITTING SUB-BIDS

A. Sub-bids shall be submitted in accordance with provisions of the General Laws (Ter. Ed.), Chapter 149, Section 44A to 44L, inclusive, as amended. The time and place for submission to Sub-Bids shall be set forth under INSTRUCTIONS TO BIDDERS.

B. Each Sub-Bid filed with the Awarding Authority must be accompanied by BID BOND, or CERTIFIED CHECK, or a TREASURER'S CHECK or CASHIER'S CHECK issued by a responsible bank or trust company, payable to the **City of Amesbury** in the amount stipulated in the INSTRUCTIONS TO BIDDERS. A Sub-Bid accompanied by any other form of bid deposit than those specified will be rejected.

C. Each Sub-Bid submitted for the work, under this SECTION, shall be on a form furnished by the Awarding Authority and required by SECTION 44F of Chapter 149 of the General Laws, as amended.

D. Work to be performed under this SECTION is shown on Contract Drawings numbered:

G.0.01, G.0.02, G.0.04-G.0.08, inclusive; 2.1.00-2.8.03, inclusive; 3.4.01-3.9.15, inclusive; 4.1.01-5.4.11, inclusive; 5.6.01-5.6.13, inclusive; 6.1.00-6.2.01, inclusive; 7.4.01-7.4.03, inclusive; 8.4.01-8.5.03, inclusive; 9.4.01-9.7.07, inclusive; and 10.0.01-10.3.13, inclusive.

Remaining Contract Drawings are included for reference and coordination.

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a sub-bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish and install the following, as shown on the Drawings and/or specified herein.

1. Ultra-low modulus silicone rubber sealant, including joint bead back-up, installed in the following joints:
    a. Perimeter joints between hollow metal exterior door frames and masonry, and other dissimilar materials.
    b. Control and expansion joints in exterior masonry.

c. Other exterior joints of the structure, designated on the Drawings to receive "sealant", except as otherwise specified hereunder.

2. Urethane-base sealant including joint bead back-up, for upper 1/2 inch of joints in interior pavements, between interior concrete pavements and walls of the building and other horizontal joints noted to receive "sealant" on the Drawings.

3. Two-part polytremdyne sealant (or optional two-part polysulfide sealant), including joint bead back-up, installed in the following joints.

   a. Interior expansion and control joints and where else shown on the Drawings.

4. Latex-base caulking material, including joint bead back-up, installed in the following joints:

   a. Interior perimeter joints of all openings in new exterior walls.

   b. Other interior joints designated on the Drawings to receive "caulking," except as otherwise specified hereunder.

5. Below-grade dampproofing, with insulating protective board, applied to:

   a. The exterior face of all perimeter concrete foundation walls except where sheet membrane waterproofing is called for.

6. Cement-based crystalline waterproofing inside walls and floor of elevator pits.

7. Sheet membrane waterproofing, drainage mat and rigid insulation at below-grade retaining walls at occupied areas of ground floor as shown on the Drawings.

~~C. Install the following as furnished under the following SECTION.~~

~~1. Install clamps for mechanical room floor drains as furnished under SECTION 220001-PLUMBING.~~

C. This subcontractor shall furnish, install and maintain in safe, adequate condition all lifts, hoisting, staging and scaffolding that are necessary for the proper execution of the work of this section.

D. LEEDv4-S Requirements:

1. The work of this section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEEDv4-S Certification at “Silver” Level is an Owner Requirement that is critical to secure project funding from the Massachusetts School Building Authority. LEEDv4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.

2. For all adhesives and sealants field applied on site and inside the weatherproofing, meet the LEEDv4-S requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

3. Meet the LEEDv4-S requirements for MR Credit 2, Building Product Disclosure and Optimization – Environmental Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers' product documentation for each product having an Environmental Product Declaration (EPD).

E. Exterior Envelope Commissioning - Refer to SECTION 019113-BUILDING COMMISSIONING REQUIREMENTS.

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be performed under the designated SECTIONS:

1. Construction of mock-up: SECTION 014339-EXTERIOR MOCK-UPS.
2. Compressible joint fillers in masonry, and membrane flashing in masonry walls: SECTION 040001-MASONRY.
3. Compressible joint fillers in cast-in-place concrete, and underslab moisture barrier and insulation and sealing of saw cuts in slabs-on-grade: SECTION 033000-CAST-IN-PLACE CONCRETE.
4. Metal flashings and sealants in conjunction therewith, roofing, roofing flashings and internal sealants for preformed soffits, fascias and flashings: SECTION 070002-ROOFING AND FLASHING, SECTION 074213-PREFORMED CLADDING and SECTION 074251-PORCELAIN TILE WALL SYSTEM.
5. Internal sealants and perimeter sealants and caulking (exterior and interior) in conjunction with metal window, curtainwall and storefront systems: SECTION 080001-METAL WINDOWS.
6. Sealants, in conjunction with interior glazing: SECTION 080002-GLASS AND GLAZING.
7. Caulking and liquid membrane waterproofing, in conjunction with ceramic tile: SECTION 090002-TILE.
8. Perimeter exterior joints at window and curtainwall systems: SECTION 080001-METAL WINDOWS.
9. Sealants, in conjunction with gypsum drywall surfaces and accessories: SECTION 092116-GYPSUM WALLBOARD.
10. Air and vapor barriers: SECTION 071326-AIR AND VAPOR BARRIERS.
11. Joint sealants and backer rod at expansion and construction joints in exterior concrete pavement: SECTION 321313-SITE CONCRETE.
12. Caulking between plumbing fixtures and walls and floors: SECTION 220001-PLUMBING.
13. Sealant and caulking at counters, backsplashes and other finish carpentry items except as otherwise detailed in the contract drawings: SECTION 062000-FINISH CARPENTRY and SECTION 123533-CLASSROOM CASEWORK.

14. Caulking and sealants at backsplashes, side panels and scribes at wall construction at classroom casework: SECTION 123533-CLASSROOM CASEWORK.

1.04 SUBMITTALS

A. Submit the following samples in accordance with the provisions of SECTION 013300-SUBMITTALS.

1. Joint bead material – 12-inch length.

2. Sealants and caulking materials, 3-inch strips of each specified type, in all available colors for selection by the Architect, applied to pieces of cardboard.

B. Include, with samples submission, complete manufacturer's specifications, installation instructions and application data, and duplicate copies of certifications of compliance to the designated Standards and Specifications set forth herein for all material, together with supporting test data and chemical composition of each material. Written approval of the Architect must be obtained for all samples and data before delivering any material to the project.

C. Manufacturer's data - Submit to the Architect copies of manufacturer's specifications and installation and application instructions for all herein specified, and other data as may be required.

D. General Contractor’s Review - Accompanying approval request, submit to the Architect written statement signed by the Subcontractor, stating that the Architect’s drawings and specifications for materials herein specified have been reviewed with an agent or the manufacturer of the primary materials and that he is in agreement that the selected systems and all other materials herein specified are proper, compatible and adequate for the application shown, and the conditions and details are not in conflict with the respective warranties. Show by copy of transmittal from that copy of statement that has been transmitted to respective manufacturers.

E. Mockups of sealant materials installation: Perform sealant samples on mock-ups in conjunction with exterior wall system mockup panel construction to integrate the sealant installation into the exterior wall for approval by the Architect. Provide several mockups if necessary to include the various conditions. Rebuild mockups that are not approved at no additional cost to the Owner.

1. Final Mock-Up: Following the Architect’s review and approval of the mock-up panel, including those portions of the panel furnished and installed under other SECTIONS, a final mock-up panel shall incorporate all approved materials, colors and methods of installation. This final mock-up all be left on site to serve as the reference standard for appearance and workmanship as the work progresses. This Subcontractor shall, at no additional cost to the Owner, rebuild the portions of the mock-up furnished and installed under this SECTION using the final approved materials, colors and construction to complete the final mock-up.

2. Refer to SECTION 014339-EXTERIOR MOCKUPS for additional requirements.

F. LEED for Schools Submittals (Refer to SECTION 013300-SUBMITTALS):

1. Relevant supporting documentation required by LEED for Schools v4 and as detailed in Section 018113 - Sustainable Design Requirements.

2. A completed LEED MATERIALS REPORTING FORM, per SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

3. Product substitution requests are subject to additional LLEDv4-S submittal requirements, see SECTION 012500-SUBSTITUTION PROCEDURES.

1.05 PRE-WATERPROOFING CONFERENCE

A. After approval of all materials and prior to installation, a pre-waterproofing conference shall be held at the job site. In attendance shall be (1) Architect, (2) General Contractor (3) Owner's Project Manager and (4) Waterproofing Subcontractor, and (4) Manufacturer's representative.

B. The parties shall review Drawings, specifications and approved materials. Correct conflicts, if any, between approvals and specification requirements. Examine job site conditions, including inspection of substrate, material labels and methods of storing materials. Review installation procedures, scheduling and temperature requirements, and establish protection methods for finished waterproofing from other trades.

1.06 GUARANTEE AND BONDS

A. Silicone Sealant Systems

1. Manufacturer for the work of this SECTION shall review the Contract Documents, Shop Drawings and inspect the installation, and upon approval issue a standard 20-year warranty.

1.07 QUALITY ASSURANCE

A. The Subcontractor shall, for all materials and systems specified herein, submit a letter from each respective manufacturer certifying this Subcontractor is an authorized applicator.

1.08 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Each container must bear an unbroken seal, test number, and label of the manufacturer upon delivery to the site. Failure to comply with these requirements shall be sufficient cause for rejection of the material in question by the Architect and his requiring its removal from the site. New materials conforming to said requirements, shall be promptly furnished at no additional cost.

1.09 JOB CONDITIONS

A. Weather conditions must be dry and of the proper temperature during application operations. Surfaces receiving work of this SECTION must be absolutely dry and dust free. All joints receiving sealants and caulking materials shall be subject to the approval of the materials manufacturer for proper use of the specified materials.

B. Adjacent surfaces must be protected from damaged work performed under this SECTION.

1.10 FIELD ADHESION TESTS

A. Perform adhesion tests on samples of sealant applied to prepared substrates at the site to assure that the proposed materials and installation procedures achieve adequate adhesion and that the optimum primers are selected. The General Contractor shall schedule the testing and report the results at no additional cost to the Owner. The Subcontractor may request the sealant manufacturer's technical representative visit the site to assist with adhesion testing.

B. Perform jobsite sealant adhesion tests in accordance with the following:

1. Apply three sealant test strips to each jobsite substrate. Prepare three samples for each type of sealant proposed on each substrate.
2. Sealant test strips shall be a minimum of 4 in. long at each location. Apply a 1 in. wide strip of bond breaker tape across the edge of each test specimen to produce a tab for gripping the specimen during testing.
3. Prepare additional test samples for each primer or substrate preparation technique recommended by the sealant manufacturer. For substrates where adhesion may benefit from the use of a primer, prepare test strips with and without primer to evaluate the effect on adhesion.
4. Locate sealant test strips in areas approved by the Owner in advance. Remove all traces of sealant test residue on substrates to remain.
5. Install sealant sufficiently in advance of general sealant application to allow time for curing and testing, and in no case less than three weeks in advance.
6. After curing for at least three weeks, forcibly remove sealant test strips to check on the sealant adhesion. Failure must be by tearing within the sealant itself (cohesive failure). Sealant test samples that fail adhesively (that is, by pulling cleanly away from the substrate leaving little or no sealant residue) are unacceptable.
7. If sealant fails adhesively, modify sealant application procedures as recommended by the sealant manufacturer and repeat testing until satisfactory adhesion is achieved.
8. Notify Architect at least 48 hrs. prior to the installation of test samples and 48 hours in advance of performing pull-tests so that he can be present to observe the installation.
9. Provide a written report to the Architect describing the testing, the results, and the recommendations of the sealant manufacturer.

PART 2 PRODUCTS

2.00 LEEDv4-S REQUIREMENTS

A. Products and materials used for this section of the work are required to meet the following criteria for LEEDv4-S materials Credits, and a completed LEED v4 MATERIALS REPORTING FORM shall be submitted for all materials in this SECTION:

1. Recycled Content. (See Section 018113 Sustainable Design Requirements for overall project recycled content requirements.) The Contractor shall examine each product or material specification below for a stated minimum recycled content requirement, and if none is stated, the requirements under 018113 shall govern.
2. Regional Content. (See Section 018113 Sustainable Design Requirements for overall project regional content requirements.) The Contractor shall examine each product or material specification below for a stated minimum regional content requirement, and if none is stated, the requirements under 018113 shall govern.
3. Furnish any adhesives and sealants applied on site inside and outside the air and vapor barrier such that they meet the requirements for IEQ Credit 2 as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

2.01 MATERIALS REQUIREMENTS

A. Deliver each material in manufacturer's unopened container or bundles, fully identified with brand, type, grade, class, and all other qualifying information.

B. Storage of Materials - Store all materials in properly protected and dry storage facilities until ready for use. Installation of wet or damp materials will not be accepted. Do not use materials which have been damaged in any manner.

C. Protect work from damage during construction period so that it shall be without indication of abuse or damage at time of acceptance.

D. Protect the building from damage resulting from spillage, dripping, and dropping of materials. Repair and restore other work damaged during roofing operations.

E. Prevent waterproofing materials from running into the drains, clogging rain water conductors.

F. Take all necessary precautions against fire and other hazards, during delivery, storage, and installation of inflammable adhesives, solvents, and other materials specified herein. Comply with local ordinances and fire regulations in the installation of hazardous materials specified or required under this SECTION.

2.02 ULTRA-LOW MODULUS SILICONE SEALANT

A. Materials

1. Sealants shall be Dow Corning 790, Tremco Spectrum I, Pecora 890, GE Silpruf SCS-9000 NB silicone building sealant or an approved equal, meeting the following minimum requirements:
   a. TT-S-001543A (COM-NBS) Class A.
   b. TT-S-00230C (COM-NBS) Class A.
   c. ASTM C-920 Type S, Grade NS, Class 50, USE T, NT, M, G, A, O.
2. Primer shall be of a type as recommended by the manufacturer of the sealant. Primers shall be non-staining.
3. Joint beads shall be closed-cell polyethylene foam rod or closed-cell polyurethane foam rod, 1/3 greater in diameter than joint width. Beads shall be Tremco Backing, Toch-Tok-Rod "E", BASF closed cell backer rod or an approved equal as recommended by the sealant manufacturer.

2.03 POLYURETHANE-BASE SEALANT MATERIALS

A. Materials

1. Sealant shall be a two-part gun-grade polyurethane-base sealant, in color as selected by the Architect. Sealant shall be Pecora Urexpan NR-200, Williams Products, Inc. Dynaseal, Tremco Vulkem or an approved equal meeting the following minimum requirements:
   a. Adhesion to concrete – 25, as per ASTM C794
   b. Harness, Shore A, after heat aging – 25-35, as per ASTM C661
   c. Elongation (%) – 600, as per ASTM D412
   d. Tensile strength (psi) – 150, as per ASTM D412
   e. Maximum Movement Compatibility – as per ASTM C719

      Extension (%) – 25
      Compression (%) – 25
2. Primers shall be as recommended by the sealant manufacturer.
3. Joint beads – As specified herein for sealant materials.

2.04 TWO PART POLYTREMDYNE SEALANT

A. Materials

1. Sealant – Two-part polymer base sealant, in color as selected by the Architect, or (optional) approved equal two-part polysulfide-base sealant, meeting the following minimum requirements:
   a. Staining – None, as per Fed. Spec. Test TT-S-00227c.
   b. Hardness – Shore "A" average 35.
   c. Elongation – 300% @ 35 degrees F., 500% @ 75 degrees F.

d. Dynamic movement – no adhesive or cohesive failure.

e. Sagging – None, as per Fed. Spec. Test TT-S-00227c.

f. Adhesion in peel – No adhesion failure after 8,000 hours WX; peel strength 20 to 30 pounds.

2. Primer – Of a type recommended by the manufacturer of the sealant. Primers shall be non-staining.

3. Joint beads – As specified herein for sealant materials.

2.05 LATEX BASE CAULKING MATERIALS

A. Materials

1. Caulking material – Pecora Acrylic Latex Caulk AC-20, Tremco Tremflex 834, Bostik Findley Chem-Calk 600, or an approved equal, in color as selected by the Architect.

2. Primer – Of a type as recommended by the manufacturer of caulking material and shall be non-staining.

3. Joint beads – As specified herein for sealant materials.

2.06 BELOW-GRADE DAMPPROOFING MATERIALS

A. Dampproofing system has been based upon Non-Fibered Foundation and Roof Coating manufactured by Gardner-Gibson. Similar systems by W. R. Meadows, Carlisle Coatings and Waterproofing or other manufacturers meeting the VOC requirements of SCAQMD Rule 1168 will be considered as an equal upon submission of adequate supporting data.

B. Materials shall be as follows, or approved equal:

1. Apply to surface using a roller at a rate of 70SF per gallon.

2. Protective board – Let dry 24 hrs. before backfilling. Place as protection board rigid plastic foam insulation, 2 inches thick, DOW Stryofoam “Square Edge”, Atlas Thermal Star X-Grade, Owens Corning Foamular or approved equal compatible with the materials.

2.07 CEMENT-BASED CRYSTALLINE WATERPROOFING

A. Cement-based crystalline waterproofing shall be a complete system for horizontal and vertical waterproofing of concrete and masonry surfaces equal to “Hey’Di K – 11” by Euclid Chemical Co., “Xypex Admix C-2000/C-2000NF Concrete Waterproofing” by Xypex Chemical Co., “Krystol T1” by Kryton International, Inc. or an approved equal.

2.08 SHEET MEMBRANE WATERPROOFING

A. Sheet membrane waterproofing shall be a complete system for horizontal and vertical waterproofing of concrete and masonry surfaces. To establish a level of quality, design and function specifications and drawings are based on “CCW Mira DRI 860/861” by Carlisle Coatings and Waterproofing. Similar systems by GCP Products “Bituthene”, Henry “WP200” or others will be considered for approval by the Architect upon receipt of adequate supporting data and samples. System shall include drainage mat, insulation and all accessories including, but not limited to, primers, sealants, termination bars and clamps for a complete waterproofing system. All accessory products shall be Carlisle unless otherwise noted.

B. Membrane: Self-adhering waterproofing membrane shall consist of a 56 mill rubberized asphalt membrane laminated to a 4 mill cross laminated polyethylene film, and shall meet or exceed the following requirements:

1. Tensile Strength: 325 psi minimum, ASTM D 412
2. Ultimate Elongation: 350% minimum, ASTM D 412
3. Puncture Resistance: 60 lbs. minimum, ASTM E 154
4. Permeance: 0.05 Perm maximum, ASTM E 96 (B)
5. Low Temperature Flexibility: Unaffected at -45^{o}F, ASTM D 1970, 1" mandrel
6. Tensile to Film: 5000 psi, ASTM D 882
7. Thickness: 60 mils, ASTM D 3767
8. Hydrostatic Head: 230 ft., ASTM D 751
9. Water Absorption: 0.1% by wt., ASTM D 570

C. ACCESSORY PRODUCTS

1. Surface Primer: Shall be CCW-702 Solvent-based Primer, CCW AWP Water-Based Primer, or CCW-714 Water-Based Primer.
2. Mastic: Shall be CCW-704 Mastic.
3. Sealants: Shall be CCW-703 Vertical Grade Liquiseal Membrane, PT-304 one component, CCW-201 two component Polyurethane Sealant or CCW LM-800XL
4. Backing Rod: Shall be closed-cell polyethylene foam rod.
5. Rigid Insulation / Protection Board: 2-inch thick rigid plastic foam insulation: Dow Styrofoam “Square Edge”, Atlas “ThermalStar X-Grade”, Owen Corning “Foamular” or approved equal compatible with membrane system.
6. Drainage Mat: Carlisle MiraDrain 6200 0.4” or equal, minimum flow rate: 110 gpm /ft.^{2}, minimum compressive strength: 15,000 psi.

PART 3 EXECUTION

3.01 APPLICATION CONDITIONS – WATERPROOFING, SEALANTS AND CAULKING

A. Weather conditions must be dry and of the proper temperature during application operations. Surfaces receiving work of this SECTION must be absolutely dry and dust free. All joints receiving sealants and caulking materials shall be subject to the approval of the materials manufacturer for proper use of the specified materials.

B. Protect all adjacent work from damage by work performed under this SECTION.

3.02 INSTALLATION OF SILICONE SEALANT AND LATEX CAULKING MATERIALS

A. Thoroughly clean all joints, removing all loose mortar, oil, grease, dust, frost, and other foreign materials which shall prevent proper adhesion. Apply masking tape to each exposed surface of joints. Rake out joints to properly receive new sealant.

B. After cleaning, and if so recommended by the materials manufacturer, apply primer to all joint surfaces, taking care not to stain adjacent surfaces.

C. Install joint bead back-up in all joints in excess of 5/8 inch depth (from face of wall to edge of compressible joint filler), and joints which have no back-up therein, placing the joint bead in the joint in a manner which shall assure a constant depth 1/8 inch greater than the sealant and caulking material depth tolerances specified hereunder. Set beads into joints continuously, by slightly stretching during placement, to permit compression against sides of joint, without surface wrinkles or buckles.

D. Apply sealant and caulking material in joint using a hand caulking gun or power gun with a gun nozzle of proper size and sufficient pressure to completely fill joints. The depth of sealant and caulking materials shall be in accordance with the recommendations of the materials manufacturer for the specific joint function but in no case shall exceed 5/8 inches depth, not be less than 1/4 inch, regardless of the width of the joints; and outer edge of sealant and caulking material shall be kept back 1/8 inch from face of wall. Tool with a dry or water-wet tool only. Do not use detergents or soapy water for tooling operations. Joints shall be given a slight concave surface. Remove masking tape immediately after tooling and/or before sealant and caulking material has taken initial set.

E. Do not apply materials when temperatures are below 40 degrees F. without prior approval of the Architect.

F. Primer, if used, shall be maintained within the joint area and not allowed to over-lap any adjacent surface.

3.03 INSTALLATION OF URETHANE-BASE SEALANT

A. Apply sealant directly into joint by gun, completely filling upper 1/2 inch of joints.

B. Tool surface of sealant with square-edge tool, slightly below surface.

3.04 BELOW-GRADE DAMPPROOFING APPLICATION

A. First coat – Brush or spray on at a rate of 125 - 150 square feet per gallon, filling all voids in concrete surfaces completely.

B. Second coat – Towel-apply at a rate of 20 - 25 square feet per gallon.

C. Protective board – Embed specified board in second coat, over entire dampproofed area, tightly butting all edges.

3.05 CEMENT-BASED CRYSTALLINE WATERPROOFING

A. Surfaces to receive waterproofing shall be thoroughly dry and free of moisture. Concrete shall have cured a minimum of 28 days before application of waterproofing. Surfaces shall not contain any grease, oil, or any other contaminants which could affect the complete bonding of the waterproofing membrane to the concrete surface.

B. Install and complete the system to ensure that no water leakage occurs through waterproofing system. Install the system in accordance with the manufacturers written instructions.

C. Allow waterproofing to cure properly. During this period, block off traffic and protect waterproofing from physical damage.

3.06 SHEET MEMBRANE WATERPROOFING

A. INSPECTION

1. Before any waterproofing work is started the waterproofing applicator shall thoroughly examine all surfaces for any deficiencies. Should any deficiencies exist, the architect, owner, or general contractor shall be notified in writing and corrections made.

2. Condition of Concrete Surfaces (Surfaces prepared by SECTION 033000-CAST IN PLACE CONCRETE):

a. The concrete surfaces shall be of sound structural grade and shall have a smooth finish, free of fins, ridges, protrusions, rough spalled areas, loose aggregate, exposed coarse aggregate, voids or entrained air holes. Rough surfaces shall receive a well-adhered parge coat.

b. Concrete shall be cured by water curing method. Any curing compounds must be of the pure sodium silicate type and be approved by the membrane manufacturer representative.

c. Concrete shall be cured at least 7 days and shall be sloped for proper drainage.

d. Voids, rock pockets and excessively rough surfaces shall be repaired with approved non-shrink grout or ground to match the unrepaired areas.

e. Surfaces at cold joints shall be on the same plane.

B. SURFACE PREPARATION

1. The concrete surface must be thoroughly clean, dry and free from any surface contaminates or cleaning residue that may harmfully affect the adhesion of the membrane.

2. Install a ¾ inch face, 45-degree cant of CCW-201 Polyurethane Sealant or CCW LM-800XL at all angle changes and inside corners including, but not limited to, penetrations through the deck, walls and curbs.

3. All cracks over 1/16 inch in width and all moving cracks under 1/16 inch in width shall be routed out to ¼ inch minimum in width and depth and filled flush with PT-304 or CCW-201 polyurethane sealant.

4. All expansion joints less than 1 inch wide shall be cleaned, primed, fitted with a backing rod and caulked with CCW-201 Polyurethane Sealant. For larger joints, contact manufacturer's representative.

5. Allow all sealant to cure at least overnight.

6. Stir Primer. Apply a thin film of primer 10 inches wide, centered over sealed cracks and joints, hairline cracks, and cold joints. Apply primer 8 inches on each side of all corners. Prime concrete around drain flanges. Allow primer to dry per manufacturer=s recommendations.

7. Install an 8 inch wide strip of CCW MiraDRI 860/861centered over joints and cracks. Install a 12 inch wide strip of CCW MiraDRI 860/861centered over the axis of all corners.

C. APPLICATION

1. Priming: Clean surfaces to remove residual dust before priming. Stir primer. Apply by spray or roller at a rate recommended by manufacturer. Allow to dry per manufacturer's recommendation.

2. Horizontal surfaces: Install sheet membrane from low to high point, so that laps will shed water. Overlap edge seams 2 1/2 inches, end laps 5 inches. Stagger end seams. Roll in place with an 18 to 24 inches wide, 100 lb. (min.) resilient roller. Ensure that all laps are firmly adhered and that there are no gaps or fishmouths.

3. Vertical Surfaces: Apply in lengths of 8 feet or less. Overlap edge seams 2 1/2 inches. On walls over 8 feet high, apply in 8 foot sections, starting at the lowest point with the higher section overlapping the lower section 5 inches. Roll in place using firm pressure with a hand roller.

4. Terminations: Consult Carlisle 860-9 Details for proper terminations. Roll terminating edges firmly. Apply CCW-704 mastic to all terminations and "T" joints. Apply CCW-704 Mastic or CCW-703-V Liquiseal to laps at angle changes, extending 9 inches in each direction.

5. Protection Board: Install insulation on horizontal and vertical surfaces of foundation wall construction.

6. Drainage Mat: Apply over insulation / protection board.

3.07 CLEANING

A. Clean all surfaces of adjacent surfaces which have been marked or soiled by the work of this SECTION, removing all excess mastics, sealants, and caulking materials therefrom. Use only cleaning materials and solvents which shall not damage the surfaces in any way.

END OF SECTION

SECTION 070002

ROOFING AND FLASHING

*(Filed Sub-Bid Required)

PART 1 GENERAL

1.00 TIME, MANNER AND REQUIREMENTS FOR SUBMITTING SUB-BIDS

A. Sub-bids shall be submitted in accordance with provision of the General Laws (Ter. Ed.), Chapter 149, Section 44A to 44L, inclusive, as amended. The time and place for submission to Sub-bids shall be set forth under INSTRUCTIONS TO BIDDERS.

B. Each sub-bid filed with the Awarding Authority must be accompanied by BID BOND, or CERTIFIED CHECK, or TREASURER'S CHECK or CASHIER'S CHECK issued by a responsible bank or trust company, payable to the **City of Amesbury** in the amount stipulated in the INSTRUCTION TO BIDDERS. A sub-bid accompanied by any other form of bid deposit then those specified will be rejected.

C. Each Sub-bid submitted for the work, under this SECTION, shall be on a form furnished by the Awarding Authority, and required by SECTION 44F of Chapter 149 of the General Laws, as amended.

D. Work to be performed under this SECTION is shown on Contract Drawings numbered:

G.0.01, G.0.02, G.0.04-G.0.08, inclusive; 2.1.00-2.8.03, inclusive; 3.4.01-3.9.15, inclusive; 4.1.01-4.2.03, inclusive; 6.1.00-6.2.01, inclusive; 7.4.01-7.4.03, inclusive; 8.4.01-8.5.03, inclusive; 9.4.01-9.7.07, inclusive; and 10.0.01-10.3.13, inclusive.

Remaining Contract Drawings are included for reference and coordination.

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Roofing System

1. PVC roofing system comprised of the following:

a. Substrate Board – Over metal decks only, ½ inch thick with a glass mat/primed surface loose laid to metal deck.

~~1) Fire Rated Roof Sheathing – 5/8 in. thick, installed over metal roof decks in locations shown on the Drawings.~~

b. Continuous vapor retarder:

1) Loose laid vapor retarder barrier installed over substrate board layer over metal deck.

2) Self-sealing, peel and stick vapor retarder at concrete decks.

c. Insulation – Rigid polyisocyanurate foam insulation with black mat faces, “Sarnatherm” or approved equal, obtaining a compressive strength of not less than 25 psi and having an aged R value of 5.7 per inch. Where roof decks are pitched to drain, insulation shall be 7 inches thick, except at crickets and transitions. Where tapered insulation is shown on the Drawings, polyisocyanurate insulation having the above specified properties shall be tapered ¼ inch per foot, with a minimum thickness of (4 ½) inches. Minimum thickness at roof drains shall be 2 ½ inches. Refer to Drawings for minimum thickness at canopies.

d. Cover Board – Over insulation, ½ inch thick with a glass mat/primed surface adhered to roof insulation.

e. Adhered PVC membrane.

f. Snap-on fascias and PVC clad fascias and trims.

g. All flashings and sealants required for a complete installation.

h. Walkway protection membrane.

~~i. Precast concrete splash blocks at downspouts.~~

i. River stone “visual” ballast and associated filter fabric and metal retainer edges.

j. Galvanized z-girt system including z-shaped girts, hat channels and other LGMF shapes, and all required fasteners.

2. All sealants required in conjunction with copper and metal flashing work specified hereunder.

3. Install .060 inch thick PVC membrane, z-girts, insulation, air and vapor barrier on sides and tops of doghouses, including flashing exposed ductwork to doghouses.

~~4. Fasteners for canopy mounted sign.~~

4. Coordinate with SECTION 071326-AIR AND VAPOR BARRIERS for sealing roof membrane to wall system air and vapor barriers.

5. Provide membrane compatible sealant to affix the lightning protection system. Coordinate installation with SECTION 260001-ELECTRICAL.

B. Furnish and install asphalt resistance flashing membrane at joint between doghouses and ductwork penetrations.

C. Install the following as furnished under the following SECTIONS:

1. Prefinished aluminum flashings in conjunction with membrane roofing system: SECTION 074213-PREFORMED CLADDING.

2. Prefinished aluminum ~~overflow scuppers and~~ parapet caps / copings: SECTION 074213-PREFORMED CLADDING.

3. Install clamps for roof drain flashing and sump as furnished under SECTION 220001-PLUMBING.

4. Install rigid insulation at doghouse walls as furnished under SECTION 072100-INSULATION.

D. This subcontractor shall furnish, install and maintain in safe and adequate condition all lifts, hoisting, staging and scaffolding that are necessary for the proper execution of the work of this section.

E. LEEDv4-S REQUIREMENTS:

1. The work of this section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEEDv4-S Certification at "Silver" Level is an Owner Requirement that is critical to secure project funding from the Massachusetts School Building Authority. LEEDv4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.

2. Roof membrane shall meet the specified reflectivity.

3. For all adhesives and sealants field applied, meet the LEEDv4-S requirements for IEQ Credit 2, Low-Emitting Materials as defined in Subparagraph 2.04 of SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

4. Meet the LEEDv4-S requirements for MR Credit 2, Building Product Disclosure and Optimization – Environmental Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers' product documentation for each product having an Environmental Product Declaration (EPD).

F. Exterior Envelope Commissioning – Refer to SECTION 019113-BUILDING COMMISSIONING for requirements.

1. Non-destructive infra-red (IR) scan of completed roofing assemblies will be performed. This subcontractor shall be responsible for replacing all wet areas down to deck as determined by the infra-redscan.

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be performed under the designated SECTIONS:

1. Construction of mock-up: SECTION 014339-EXTERIOR MOCK-UPS.

2. Continuous wood nailers, blocking, curbs, walls and cant strips: SECTION 061000-ROUGH CARPENTRY.

3. Concrete roof decks: SECTION 033000-CAST-IN-PLACE CONCRETE.

4. Peel and stick air and vapor barrier at walls and soffits: SECTION 071326-AIR AND VAPOR BARRIERS

5. Steel roof decks and equipment screen structural framing: SECTION 053100-METAL DECKING and 051200-STRUCTURAL STEEL.

6. Constructing metal stud duct penetration penthouses: SECTION 072116-GYPSUM WALLBOARD and SECTION 061000-ROUGH CARPENTRY.

7. Mounting of free-standing signage onto entry canopy roof: SECTION 101400-IDENTIFYING DEVICES.

8. Lightning Protection System: SECTION 260001-ELECTRICAL.

9. Furnishing and installing roof drains, furnishing clamps for same and downspout boots: SECTION 220001-PLUMBING.

10. Furnishing and installing downspouts: SECTION 074213-PREFORMED CLADDING.

11. Penetrations through roofing, including but not limited to roof mounted food service equipment, plumbing vents, exhaust fans: by trades requiring same.

12. Furnishing and installing roof curbs for mechanical equipment and waterproofing exposed ductwork with roofing membrane: SECTION 230001-HVAC.

13. Furnishing and installing PVC membrane weather protection wrap at exposed rooftop ductwork: SECTION 230001-HVAC.

1.04 SUBMITTALS

A. Submit complete shop drawings in accordance with the provisions of SECTION 013300-SUBMITTALS.

B. Shop drawings shall include:

1. Large scale details showing all project specific conditions in context with surrounding materials.

2. Dimensional layouts of insulation, tapered insulation, crickets, and of underlayment including fasteners. Such fasteners to comply with applicable requirements of Underwriters Laboratory and Factory Mutual, and following the membrane manufacturer's recommendations, but at least one fastener for every two square feet.

3. Exterior elevations showing the proposed locations of all seams in snap-on fascias.

C. Submit the following Letters of Certification for each specified roof membrane system:

1. Letter from the roof membrane manufacturer stating that the insulation submitted for the project is compatible with the roofing membrane submitted.

2. Letter from the insulation manufacturer stating that the insulation submitted for the project is compatible with the roofing membrane submitted.

3. Certification of Underwriters Laboratory and Factory Mutual approval of insulating attachment fasteners.

D. Submit the following samples in accordance with the provisions of the SECTION 01330-SUBMITTALS.

1. Roof insulation – 12 x 12 inches of specified types and thickness.
2. PVC roofing sheets and flashings – 12 x 12 inches, of specified types and thickness, and flashing in 12 inch lengths in manufacturer's standard colors.
3. Fasteners for insulation and underlayment – Two of each type proposed.
4. Vapor retarder – 12 x 12 inches, of specified types.
5. Cover Board – 12 x 12 inches of specified type.
6. Color samples for custom color prefinished snap on roof edge fascia trim.
7. Fasteners for free-standing roof mounted sign.
8. Asphalt resistant flashing membrane.
9. Riverstone – Min. ½ gallon (0.07 cu. ft.) showing full range of sizes.

E. Manufacturer's Literature – Submit to the Architect for approval manufacturer's CSI "Spec-Data" sheet or equivalent printed literature indicating product information correlated to specified requirements.

F. Manufacturer's Data – Submit to the Architect copies of manufacturer's specifications and installation instructions for the roofing system, and other data as may be required.

G. Contractor's Review – Accompanying approval request, submit to the Architect written statement signed by the General Contractor and the Roofing and Flashing Subcontractor, stating that the Architect's drawings and specifications for roofing and flashing have been reviewed with an agent or the manufacturer of the primary roofing materials and that he is in agreement that the selected systems for roofing and flashing are proper, compatible and adequate for the application shown, and the conditions and details are not in conflict with the roofing and flashing warranties. Show by copy of transmittal form that copy of statement has been transmitted to respective manufacturers and involve certification of U.L. approval of the materials.

H. Statement of Application – At the time of Substantial Completion, as defined in the GENERAL CONDITIONS, submit a statement to the Architect, signed by the General Contractor, and Roofing and Flashing Subcontractor and Roofing Manufacturer, stating that the roofing, flashing, and insulation, comply with these specifications, and that the installation methods complied with the manufacturer's printed instructive materials, workmanship or arrangement of the various parts shall be made good to the satisfaction of the Owner at the Membrane Roofing Subcontractor's expense.

I. **No roofing work shall commence without the Architect's approval of all Letters of Certification in addition to all other requirements of this SECTION.**

J. Mock-Up Panel Structure:

1. Provide and install roofing systems as shown on the Drawings. Mock-up structure shall include entire membrane system: insulation, vapor barriers, recovery board, PVC membrane, ballast and fascias including transitions to adjacent construction as shown on the mock-up drawings. The final mock-up structure shall be left on site to serve as the reference standard for appearance and workmanship as the work progresses. This subcontractor shall, at no additional cost to the Owner, rebuild the portions of the mock-up furnished and installed under this SECTION using the final approved materials, colors and construction to complete the final mock-up.
2. Refer to SECTION 014339-EXTERIOR MOCK-UPS for sizes, configuration and other requirements for the mock-up panel structure.
3. Approval of mock-ups does not constitute approval of deviations from the Contract Documents contained in mock-ups unless Architect specifically approves such deviations in writing.
4. Mock-up panel structure will not remain as part of the Work.

K. LEED for Schools Submittals (Refer to SECTION 013300-SUBMITTALS):

1. Relevant supporting documentation required by LEED for Schools v4 and as detailed in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
2. A completed LEED MATERIALS REPORTING FORM, per SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
3. Product substitution requests are subject to additional LEEDv4-S submittal requirements, see SECTION 012500-SUBSTITUTION PROCEDURES.

1.05 COORDINATION OF ALUMINUM FINISH

A. Snap-on roof fascias and flashing to be furnished and installed under this Section shall match in color and finish items furnished under the following Sections:

1. SECTION 074213-PREFORMED CLADDING: Preformed aluminum ACM and single skin cladding panels, copings, flashing and trim.
2. SECTION 080001-METAL WINDOWS: Aluminum windows, curtainwalls, storefronts, doors and trim.

B. It shall be the responsibility of both the roofing subcontractor and the General Contractor to jointly coordinate the finish operation with the other listed trades to achieve a uniform finish.

1.06 PRE-ROOFING CONFERENCE

A. After approval of all materials and prior to installation, a pre-roofing conference shall be held at the job site. In attendance shall be (1) Architect, (2) General Contractor, (3) Roofing Subcontractor, (4) Manufacturer's representative, and (5) Owner’s Project Manager.

B. The parties shall review Drawings, specifications and approved materials, correct conflicts, if any, between approvals and specification requirements. Examine job site conditions, including inspection of deck, material labels and methods of storing materials. Confirm that all nailers, curbs and edges are provided and correctly installed. Review installation procedures, scheduling and temperature requirements, and establish protection methods for finished roof from other trades.

1.07 GUARANTEE AND BONDS

A. The Roofing Subcontractor, as a condition precedent to final payment, shall execute his own written guarantee direct to the Owner, warranting all roofing, systems, insulation, and sheet metal work weather and watertight and perfect for a period of **three years** after date of Substantial Completion of the building. Any imperfections as a whole or in part, by reason of defective materials, workmanship or arrangement of the various parts shall be made good to the satisfaction of the Owner at the Membrane Roofing Subcontractor's expense.

B. The Roofing Membrane Manufacturer shall inspect the installation of the roof systems and upon approval shall issue their standard non-prorated twenty (20) year warranty for the entire (full system) roofing installation. The roofing manufacturer shall also issue their standard twenty (20) year warranty for membrane only.

C. Wind Speed: The wind speed coverage for the specified roof system shall be in accordance with manufacturer’s requirements with a minimum of 55 mph.

1.08 RESPONSIBILITY

A. Furnish, install and maintain in a watertight condition at all times, substantial temporary coverings and other protection items required to prevent the entry of water into the existing building from the roofs or flashing areas, commencing at the time work of this SECTION is started, and continued until the work is entirely completed.

B. Bear full responsibility for any and all damage caused by failure to comply with the requirements of this paragraph, and pay all costs resulting from such damage.

1.09 QUALITY ASSURANCE

A. The Roofing Contractor shall have a minimum of five (5) years of experience in the installation of the specified roofing systems and shall submit a letter from the manufacturer(s) certifying that this Roofing Contractor is an authorized installer.

B. All membrane roofing and flashing materials furnished and installed under this Section shall be the product of a single manufacturer or shall be specifically approved for use with his materials by the manufacturer whose roofing specification is used. Materials shall be high grade, first quality of domestic USA manufacturer with an application history of 10 years in the United States. Furnish a written affidavit stating that these requirements have been complied with.

C. The entire roofing system, including but not limited to, the membrane, vapor barrier, adhesives, insulation, cover board and flashing shall be applied in strict accordance with the roofing manufacturer's written requirements and specifications applicable to roof conditions. The entire roofing system shall be accepted and approved by the proposed roofing membrane manufacturer. There shall be no deviations made from this specification or the approved shop drawings without prior written approval by the manufacturer.

1. The roofing manufacture's published requirements are considered minimum standards. Requirements specified herein may exceed those of the manufacturer. In the event of such a discrepancy the most stringent requirements shall govern.

2. Where additional work or materials, or greater quantities of materials than required by roofing manufacturer are specified herein, these Project Specifications shall govern.

3. The above referenced provisions shall be adhered to at no additional cost to the Owner.

D. During and upon completion of the installation, inspections shall be made by a representative of the roofing manufacturer to ascertain that the roofing system has been installed according to the applicable manufacturer's specifications and details. Copies of the manufacturer's inspection reports shall be submitted to the Architect.

1.10 U.L. LISTING

A. Materials used under this contract shall be labeled, tested and listed by (U.L.) for the application indicated on the Drawings with the following ratings for roof slopes shown:

U.L. Class A, with main wind force resistance of 110 MPH.

1.11 FIELD TESTING

A. Fasteners – Field testing of fasteners shall be required. Four random fasteners for each separate roof area for securing vapor retarder and/or insulation shall be tested for pull-out resistance as listed below. A report of the findings shall be forwarded to the Architect. Testing shall be performed by the fastener manufacturer.

1. New steel and concrete decks.

B. Refer to SECTION 019113- BUILDING COMMISSIONING REQUIREMENTS for additional field testing requirements.

1.12 INTENT

A. It is not the intent herein to describe all of the details for roofing and flashing. The Roofing Contractor shall assure himself that all items and details not otherwise specified herein but shown on the Drawings, or as otherwise required by the membrane manufacturer to achieve a complete watertight installation, shall be provided under this contract at no additional cost to the Owner.

PART 2 PRODUCTS

2.00 LEEDv4-S REQUIREMENTS

A. Products and materials used for this section of the work are required to meet the following criteria for LEEDv4-S materials Credits, and a completed LEEDv4 MATERIALS REPORTING FORM shall be submitted for all materials in this SECTION:

1. HEAT ISLAND REDUCTION: Documentation that roofing system has a Solar Reflexive Index (SR) not less than 78% when calculated per ASTM E-1980.
2. Recycled Content. (See Section 018113 Sustainable Design Requirements for overall project recycled content requirements.) Contractor shall examine each product or material specification below for a stated minimum recycled content requirement, and if none is stated, the requirements under 018113 shall govern.
3. Regional Content. (See Section 018113 Sustainable Design Requirements for overall project regional content requirements.) Contractor shall examine each product or material specification below for a stated minimum regional content requirement, and if none is stated, the requirements under 018113 shall govern.
4. Furnish any adhesives and sealants such that they meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in Subparagraph 2.04 of SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

2.01 MATERIALS REQUIREMENTS

A. Deliver materials in manufacturer's unopened container or bundles, fully identified with brand, type, grade, class, and all other qualifying information, including UL and other specified insurance company's labels for specified roof construction.

B. Storage of Materials – Store all materials in properly protected and dry storage facilities until ready for use. Installation of wet or damp materials will not be accepted. Do not use materials which have been damaged in any manner.

C. Protect work from damage during construction period so that it shall be without indication of abuse or damage at time of acceptance.

D. Protect the building from damage resulting from spillage, dripping, and dropping of materials. Repair and restore other work damaged during roofing operations.

E. Prevent roofing materials from running into and clogging rain water conductors and roof drains.

F. Take all necessary precautions against fire and other hazards, during delivery, storage, and installation of inflammable adhesives, solvents, and other materials specified herein. Comply with local ordinances and fire regulations in the installation of hazardous materials specified or required under this SECTION.

2.02 ADHERED PVC ROOFING SYSTEM AND MATERIALS

A. Manufacture and Type – To establish a standard quality, design and function, specifications and drawings have been based on a PVC adhered system as manufactured by Sarnafil. Similar systems by Duro-Last "Single Ply PVC Roof Membrane System", Johns Manville "PVC Single Ply Roofing System", or others will be considered for approval as an equal by the Architect, upon receipt of adequate supporting data and samples, including UL approval for the specified roof system.

1. The roof system manufacturer shall have a minimum of five years of experience in manufacturing own membrane.

B. Membrane Sarnafil G 410 Bareback, 60 mils (.060 inch) thickness, nonwoven fiberglass reinforced membrane with an acrylic coating to repel dirt. Membrane shall conform to ASTM D 4434 (latest edition) Standard for polyvinyl chloride sheet roofing. Classification: Type II, Grade 1. The manufacturer to guarantee that the membrane thickness meets or exceeds the specified thickness when tested according to ASTM D-751. Polymer thickness to be evenly distributed above and below the membrane scrim.

1. Membrane color shall be Sarnafil Energy Smart in colors, white, with selected low roofs reflective gray as shown on the roof plans.

2. White shall have initial SRI = 0.83, and 3-year SRI = 0.73. Reflective gray shall have initial SRI = 0.73, 3-year = 0.66.

C. As manufactured, membrane shall conform to the physical properties noted I the following table:

Product Characteristics of G 410

PARAMETERS	ASTM TEST METHOD	MINIMUM ASTM REQUIREMENTS	TYPICAL PHYSICAL PROPERTIES
overall thickness mm (inches)	D 638	1.14 (0.045)	1.50(0.060)
tensile strength, psi	D 638	1,500 psi	1,550 psi
elongation at break, %	D 638	250% MD 220% CMD	250% MD 220% CMD
seam strength, % of tensile strength*		75%	85%
retention of properties after heat aging	D 3045	---	---
tensile strength, % of original	D 638	80%	93%
elongation, % of original	D 638	80%	93%
tear resistance (lbf)	D 1004	10	14
low temperature (-40°F)	D 2136	pass	pass
accelerated weathering test (Xenon)	D 2565	5,000 hours	10,000 hours
cracking (7x magnification)	D 1204	none	none
discoloration (by observation)		negligible	negligible
crazing (7X magnification)	D 2565	none	none
linear dimensional change, %	D 1204	0.1% max.	0.02%
weight change after immersion in water, max. %	D 570	±3.0% max.	1.9%

* Failure occurs through membrane rupture not seam failure.

D. Flashing Membrane

Flashing membrane shall be as supplied by Sarnafil. Flashing membrane is the same material as the roofing membrane (except when indicated otherwise).

1. Vertical wall flashing having more than 8 inches of exposure and visible from the ground shall be metal wall flashing furnished by SECTION 074213-PREFORMED CLADDING and installed under this Section.

E. Sarnafil membrane adhesive

The adhesive for bonding the Sarnafil G 410 membrane to the insulation shall be as follows:

1. Sarnafil adhesive, SCAQMD VOC compliant for the various substrate conditions.
   a. Use adhesive for bonding Sarnafil membranes to the insulation.
   b. Application rates for bonding Sarnafil membranes to various substrates:

SUBSTRATE	RATE
fiberboard	24 gal./sq.
smooth plywood	12 gal./sq.
smooth cellular concrete	2 gal./sq.

Notes:

1) Rates include the 2 gal./sq. applied to the underside of the Sarnafil membrane
2) When outdoor temperature during installation is below 40°F, add 2 gal/sq. to application rate.
3) Rates shall vary with finish of substrate.
4) Application techniques and coverage rates are different when using felt backed membranes.

F. Insulation – Rigid polyisocyanurate foam insulation with black mat faces, “Sarnatherm CG-25” or approved equal, seven inches thick at sloped decks, obtaining a compressive strength of not less than 25 psi and having an aged R value of 5.7 per inch. Where tapered insulation is shown on the Drawings, polyisocyanurate insulation having the above specified properties shall be tapered ¼ inch per foot.

1. Minimum aged R value at sloped decks shall be R-39.9.
2. Minimum aged R value at flat roof decks shall be R-34.2.

G. Substrade Board Over Metal Roof Deck **and** Cover Board Over Insulation: Sarnatherm Roof Board-A-III glass mat board, ½ inch thick with glass mat / primed surface.

H. Miscellaneous fasteners and anchors

All fasteners shall be the same type as the metal being secured. In general, all fasteners, anchors, nails, and straps, shall be of zinc or cadmium plated steel galvanized, or stainless steel. All fasteners and anchors shall have a minimum embedment of 1-1/4 inches and shall be approved for such use by the fastener manufacturer. Fasteners for attachment of metal to wood blocking shall be annular ring nails. Fasteners for attachment of metal to masonry shall be expansion type fasteners. All fasteners shall meet Factory Mutual Standard 4470 for corrosion resistance.

1. **Fasteners at exposed cellular acoustic roof deck in gym shall penetrate the top flute ONLY. No fasteners shall be exposed to view at the underside of the cellular deck.**
2. Fasteners for mounting signage on membrane shall be “PowerGrip” roof mounting system Fasteners by OMG Roofing, “U-Anchor” by Anchor Products, “EcoFasten” by EcoFasten Solar, or an approved equal.

I. Flashing membrane adhesive

The adhesive for bonding Sarnafil flashing membrane to vertical flashings shall be SCAQMD VOC compliant as recommended by Sarnafil. Substrate must be compatible, clean, dry and solvent resistant.

J. Sarnafil G 459

Fiberglass-reinforced PVC membrane .060-inch thick asphalt resistant flashing shall be used where membrane is in contact with asphalt surfaces and where grease resistant protective membrane is indicated on the Drawings.

K. Sarnamatic welder

Automatic hot-air welding apparatus for seaming of sheets.

L. Edge Flashing, as shown on the drawings.

1. Aluminum snap-on Edge Grip fascia, consisting of a rigid, continuous 20-gauge galvanized steel base retainer and a snap on decorative, three coat Kynar 500 painted, consisting of prime coat, color coat and clear top coat-.050 aluminum cap, custom color as selected by Architect. Retainer to fasten to edge blocking without penetrating the horizontal roof membrane.
    a. Finish: Fluoropolymer three-coat metallic system, consisting of 0.2 mil primer with a 0.80 mil PVCF fluoropolymer color coat containing metal flakes and a 0.50 mil PVDF fluoropolymer clear coat.
    b. Color: One custom metallic color to match Fluropon Classic Pewter – Centira Sundance Metallic – Clearcoat: 430A307.
    c. The Architect reserves the right to select the custom color match from the manufacturer’s full line of metallic finishes.

2. Fascias shall be constructed in the longest practical lengths. In no circumstances shall there be a seam within runs of less than 12 ft.-0 in. Where seams are required, no individual length shall be less than 6 ft.-0 in. Note seams shall be as shown on the approved shop drawings.

3. PVC clad, heat weldable 24 gauge G90 galvanized steel. Color will be chosen by the Architect from the full range of manufacturer's standard colors.

M. Prefabricated details

Inside/outside corners or vent stacks. (2-inch, 3-inch, 4-inch 5-inch diameters.)

N. Sarnafastener

Self-tapping, corrosion-resistant fasteners, for use in steel and wood decks, and nail-in type for concrete decks. Anchors shall also be provided for concrete decks. Corrosion-resistant plates are also required for securement of insulation.

O. Sarnastop

1-inch wide alloy extruded aluminum bar pre-punched every 12 inches on center used for additional uplift resistance at the base of parapets, walls, curbs, peaks, valleys and transitions.

P. Sarnasolv

A solvent cleaner for removal of Sarnacol adhesives form lap areas and for removal of contaminants from the Sarnafil membrane.

Q. Sealants and pitch pocket fillers

The following caulking/sealants are accepted based on chemical compatibility with Sarnafil membranes:

1. Vulkem 116 by Mameco International (VOC 72 g/l)

2. Sonneborn NP-1 by Chemrex (VOC 43 g/l)

3. Sikaflex 1A (VOC 40 g/l)

R. The following pitch pocket filler accepted based on chemical compatibility with Sarnafil membranes:

1. Chem Link Pro Pak two part urethane sealant (0 VOC)

2. Sarnafiller: A two-component urethane adhesive used for pitch pocket fillers (VOC 1.99 g/l).

S. River stone visual ballast – where called for on the drawings, provide river stone visual ballast stones and related system materials.

1. #4 Ballast – Nominal 1 ½ inch smooth river bottom stone of ballast gradation size #4, #3, #2 or #1 as chosen by the Architect as specified in ASTM D448 or ASTM D7655/D7655M spread at a minimum rate of 1,000 lbs./100 ft.^{2} (48.80 kg/m^2).

2. Miscellaneous Materials:

a. 11 oz/sf needle punched polypropylene filter fabric as protection for roof membrane.

b. Edge metal shall be .063 in. perforated aluminum. Edge metal for ballast stone retainage shall be slotted for water drainage. Splice plates as manufactured by same source or approved equal.

T. Walkway Protection – A polyester reinforced, 0.096 inch (96 mil/2.4 mm) weldable membrane with surface embossment, used as a protection layer from roof top traffic.

U. Precast Concrete Splash Blocks – Formed from precast concrete with casted drainage slope.

V. Sarnacol 2163 Board Adhesive – elastomeric, one step SCAQMD VOC compliant foamable adhesive.

~~W. Exterior Glass Faced Fire Rated Gypsum Sheathing (ASTM C 1177) – Georgia-Pacific "DensGlass" Exterior Sheathing, National Gypsum Co. eXP Sheathing, U.S. Gypsum Co. "SecurRock", or an approved equal, square edge panels, 5/8-inch thick fire rated where designated on the Drawings.~~

2.03 VAPOR RETARDER / BARRIER

A. At Metal Decks Only – Loose laid vapor retarder over metal decks shall be 10 mils thick, minimum, Sarnavap-10 by Sika Sarnafil or an approved equal. Vapor retarder shall be approved by the roofing manufacturer for inclusion into the system warranty and must meet the 0.1 permeability rating required by the energy code. Vapor barrier to be installed in accordance manufacturer recommendations. Vapor retarder to include mastic tape at seams, and self-adhesive tape at penetrations.

B. At Concrete Roof Decks – Vapor retarder shall be self-sealing peel-and-stick type, having a water vapor permeance of .03 - .05 perm, minimum .032-gauge rubberized asphalt with laminated polyethylene top sheet. Vapor retarder shall be approved by the roofing manufacturer for inclusion into the systems warranty.

C. Transition Materials – Provide transition air barrier materials for use between the loose laid and self-sealing AVB within the roofing scope, and as required to provide continuous roofing AVB at penetrations, gaps, and other transitions. Provide transition materials consisting of extruded low-modulus silicone sheet and silicone sealant designed to adhere to the membrane and adjacent material. Products shall meet the VOC requirements of SCAQMD, Rule 1168. Provide at locations as shown on the drawings.

1. Cleaning Agent

2. Silicone Sheet: SIL-SPAN Preformed Silicone Profiles by Pecora or ULTRASPAN Weatherstripping by General Electric. Provide preformed corners.

3. Silicone Sealant: Low modulus component silicone sealant compatible with adjacent materials.

Note: Window, curtainwall and storefront systems (SECTION 080001-METAL WINDOWS) shall seal to wall and roof AVB systems. Wall AVB systems (SECTION 071326-AIR AND VAPOR BARRIERS) shall seal to the roof AVB systems.

2.04 SHEET METAL AND FLASHING MATERIALS

A. Galvanized Steel Cleats – where shown on the drawings to be galvanized steel cleats shall be continuous (in lengths not exceeding 12 feet) and formed of 20 GA. minimum G90 steel.

B. Sealant in Conjunction with Sheet Metal and Flashings – low-modulus silicone sealant in color closely matching the base metal to which it will be in contact. Sealant to be compatible with roofing material.

C. Asphalt Resistant Membrane Flashing – Flexible rubberized asphalt backed, self-adhering, 20 mil membrane as manufactured by OSI, Tite-Seal, Vyco or an approved equal.

2.05 CANTS AND CRICKETS

A. Rigid fiberboard or plastic foam as recommended by manufacturer of roofing materials, and compatible with all adjacent roofing components. Furnish and install cants and crickets wherever required to achieve pitch to drains.

2.06 PRECAST CONCRETE SPLASH BLOCKS

A. At all downspout locations, furnish and install precast light weight concrete splash blocks, fanned shaped to shed water.

2.07 MISCELLANEOUS FASTENERS AND ANCHORS

A. All fasteners, anchors, nails, bars, and other similar items shall be post-galvanized steel, aluminum, or stainless steel. Mixing metal types and methods of contact shall be assembled in such a manner as to avoid galvanic corrosion. Fasteners for attachment of metal to masonry shall be expansion type fasteners with stainless steel pins. All concrete fasteners and anchors shall have a minimum embedment of 1¼ inches and shall be approved for such use by the fastener manufacturer. All miscellaneous wood fasteners and anchors used for flashing shall have a minimum embedment of 1 inch and shall be approved for such use by the fastener manufacturer.

2.08 INSULATION AT DOGHOUSE WALLS

A. Install rigid thermal insulation provided by SECTION 072100-INSULATION, which shall match the insulation provided in the cavity of masonry veneer, metal panel and cement fiber panel walls.

B. Miscellaneous Framing Components, General: Cold-formed metallic coated steel sheet, ASTM C 645, Grade 50, with ASTM A 653/A 653M, G90 (Z180) hot-dip galvanized zinc coating.

1. Z-girts: 0.053 inch / 16 ga. (1.34 mm) minimum

2. Hat Channels: 0.053 inch/16 ga. (1.34 mm) minimum.

3. Sill Channels: 0.053 inch/16 ga. (1.34 mm) minimum.

4. Other Required Shapes: 0.053 inch/16 ga. (1.34 mm) minimum.

~~2.09 SELF-ADHERING AIR AND VAPOR BARRIER MEMBRANES~~

~~A. Self-Adhering Air and Vapor Barrier Membrane: Self-adhering, self-sealing membrane of inherent fire-resistant 40 mil composite consisting of foil-faced glass laminated with a fire-resistant, factory applied pressure sensitive adhesive.~~

~~1. To establish a standard of quality, design and function required, specifications are based on Carlisle 705FRA self-adhering barrier in widths to comply with job conditions.~~

~~2. Similar LEED-S compliant membranes by Grace Construction Products, York Manufacturing, or other manufacturer will be considered by the Architect as an equal upon receipt of adequate supporting data.~~

~~B. Transition Materials: To provide an air barrier between the membrane and adjacent materials (except window, curtainwall and storefront systems), provide transition materials consisting of extruded low-modulus silicone sheet and silicone sealant designed to adhere to polyethylene side of membrane and adjacent material. Provide the following materials as acceptable to the manufacturer of the air barrier membrane and meeting the VOC requirements of SCAQMD, Rule 1168.~~

~~1. Cleaning Agent.~~

~~2. Silicone Sheet: SIL-SPAN Preformed Silicone Profiles by Pecora or ULTRASPAN Weatherstripping by General Electric. Provide preformed corners.~~

~~3. Silicone Sealant: Low modulus component silicone sealant compatible with adjacent materials.~~

PART 3 EXECUTION

3.01 INSTALLATION CONDITIONS

A. Notify the Contractor of any defects or other characteristics in the receiving surfaces which may be detrimental to the installation and performance of the items to be furnished and installed hereunder. Request correction of such surfaces and do not commence work until defects have been corrected. Commencement of roofing and flashing work shall constitute acceptance of surface conditions and the Roofing and Flashing Subcontractor shall be responsible for leakage in roofs and flashed surfaces and any other defects in these surfaces.

B. Properly prepare, under the work of this SECTION 070002, all roof surfaces which are to receive new materials furnished and installed hereunder. Remove all existing foreign material which would interfere with the proper installation and performance of new items to be furnished and installed hereunder.

C. Ensure that all openings through the roof decks for fans, vents and other items have been either temporarily or permanently covered, to prevent the entry of water into the building, prior to commencing the work of this SECTION 070002. Notify the Contractor of any uncovered openings, and request that such openings be covered.

D. Have sufficient materials on the Project to complete each day's work. The complete roofing system for any one section of the roof must be finished by the end of the day.

3.02 INSTALLATION OF VAPOR RETARDER

A. At Metal Decks – Install loose laid vapor retarder over cover board at new metal decks. Vapor retarder to be in lengths as long as possible so as to minimize seams. Lap seams are minimum 4 inches and use seam tape as recommended by manufacturer. Vapor retarder must be continuously sealed to membrane air barrier. Vapor retarder must be installed in accordance with Factory Mutual Class 1A-90 design criteria. Install mastic tape at seams and self-adhesive tape at penetrations.

B. At Concrete Decks – Prime concrete decks with manufacturers primer. Install self-stick vapor retarder at concrete decks in accordance with manufacturer’s requirements.

3.03 INSTALLATION OF INSULATION

A. All insulation shall be installed in multiple layers with joints staggered. Mechanically attach insulation up to four inches in thickness to the various decks using screw type fasteners as detailed and necessary to comply with paragraph 1.09 criteria. Remaining layers of insulation, cover board and crickets shall be adhered.

1. Insulation shall be mechanically fastened to the deck with approved fasteners and plates at a rate according to the insulation manufacturer's FM's and Sika Sarnafil's recommendations for fastening rates and patterns. The quantity and locations of the fasteners and plates shall also cause the insulation boards to rest evenly on the roof desk/substrate so that there are no significant and avoidable air spaces between the boards and the substrate. Each insulation board shall be installed tightly against the adjacent boards on all sides.
2. Fasteners are to be installed consistently in accordance with fastener manufacturer's recommendations. Fasteners are to have minimum penetration into structural deck recommended by the fastener manufacturer and Sika Sarafil.
3. Use fastener tools with a depth locator and torque-limiting attachment at recommended or supplied by fastener manufacturer to ensure proper installation.

B. Subsequent layers of tapered or flat insulation, cover board and crickets shall be adhered in compliance with insulation and membrane roofing manufacturers requirement to comply with U.L. listing and warranty, but in no case less than adhesive using two-part urethane insulation adhesive in ¾ inch ribbons spaced 12 inches on center at the field of the roof, 6 inches on center at the perimeter areas and 4 inches on center at the corners.

C. Application and foam adhesive and insulation shall be in strict accordance with the manufacturer's written requirements.

D. **At exposed to view cellular acoustic deck, fasteners shall penetrate the top flute ONLY, no fasteners shall be exposed to view from the underside.**

E. At concrete decks, the first 3 ½ inch thick insulation board shall be mechanically fastened, with all subsequent layers of insulation and cover board adhered per paragraph B above.

3.04 INSTALLATION OF COVER BOARD (AND FIRE RATED SHEATHING WHERE DESIGNATED)

A. General Criteria:

1. Boards shall be installed according to manufacturer's instructions.
2. Boards shall be neatly cut to fit around penetrations and projections.
3. Do not install more boards than can be covered with membrane by end of day or onset of inclement weather.
4. Boards shall be installed tightly against adjacent boards on all sides.
5. Boards shall lay evenly on roof deck/substrate so that there are no significant and avoidable air spaces between boards and substrate.
6. Install tapered insulation boards in accordance with insulation manufacturer's approved shop drawings.
7. Install tapered insulation boards around drains creating a drain sump.

8. Stagger joints at least 12 inches (0.3 m) between layers.

9. Board shall be adhered to insulation with insulation adhesive.

3.05 INSTALLATION OF PVC MEMBRANE

A. The surface of the insulation or substrate shall be inspected prior to installation of the Sarnafil roof membrane. The substrate shall be clean, dry, and smooth with no excessive surface roughness, contaminated surfaces, or unsound surfaces such as broken or delaminated insulation boards.

B. Adhesive

1. Over the properly installed and prepared substrate surface, Sarnacol 2170 VC adhesive shall be applied using approved solvent-resistant ¾--inch nap paint rollers. The adhesive shall be applied in a smooth, even coating with no holidays, globs, puddles, or similar irregularities. Only an area that can be covered completely in the same day's operations shall be coated with adhesive. The adhesive shall be allowed to dry completely prior to installing the membrane.

   a. Drying time increases with cooler temperatures and high humidity conditions. The Subcontractor shall check with a Sarnafil representative prior to roof operations on such days.

   b. The Subcontractor shall count the amount of adhesive used per square and shall count the number of buckets of adhesive used per area per day to verify that he is conforming to the specified adhesive rate.

2. When the adhesive on the substrate is dry, the roof membrane is unrolled. Adjacent sheets shall be overlapped a minimum of 3 inches. Once in place, one-half of the sheet's length shall be turned back and the underside shall be coated with adhesive at a rate of 2 gallons per 100 square feet while adhesive is active (produces strings when touched with a dry finger) the coated membrane shall be rolled carefully onto the previously coated substrate to avoid wrinkles. Do not allow adhesive on the underside of the membrane to dry completely. The amount of membrane that can be coated with adhesive before rolling into substrate shall be determined by ambient temperature, humidity, and manpower. Typically, two men can coat 8-12 feet at a time. The bonded sheet shall be pressed firmly into place with a weighted foam-covered lawn roller. The remaining unbonded half of the sheet shall be folded back and the bonding procedure repeated.

3. No bonding adhesive shall be applied in lap areas. All sheets shall be applied in the same manner, lapping all sheets by welding techniques.

C. Hot Air Welding of PVC Lap Areas

1. General

a. Adjacent sheets shall be welded in accordance with manufacturer's written instructions. All side and end lap joints shall be hot-air welded. Lap area shall be a minimum of 3 inches wide when machine welding, and a minimum of 4 inches wide when hand welding.

b. Welding equipment shall be provided by or approved by membrane manufacturer. All mechanics intending to use the equipment shall have successfully completed a course of instruction provided by a manufacturer's representative prior to welding.

c. All surfaces to be welded shall be clean according to manufacturer's instructions, and dry. No adhesive shall be present within the lap areas.

2. Hand Welding

Hand welded seams shall be completed in three stages. Equipment shall be allowed to warm up for at least one minute prior to start of welding.

a. The lap shall be tack welded every 3 feet to hold the material in place.

b. The back edge of the lap shall be welded with a thin, continuous weld to prevent loss of hot air during the final welding.

c. The hot-air nozzle shall be inserted into the lap, keeping the welding equipment at a 45-degree angle to the side lap. Once the proper welding temperature has been reached and the material starts to flow, the hand roller shall be applied at a right angle to the welding gun and pressed lightly. For straight laps, the 12-inch wide nozzle shall be used. For corners and compound connections, a ¾-inch wide nozzle shall be used.

3. Machine Welding

a. Machine sealed seams may be achieved by the use of manufacturer's various automatic welding equipment. When using this equipment, the manufacturer's instruction shall be followed and local codes for electric supply, grounding, and overcurrent protection observed. The automatic welding machines require 218 to 230 volts at 30 amps. The use of a portable generator is recommended.

b. When welding sheets adhered with Sarnacol 2121 adhesive, 15-inch wide metal tracks must be used over the deck sheet and under the machine welder to prevent wrinkles.

4. Quality control of welded seams

All completed welded seams shall be checked after cooling for continuity using a rounded screwdriver or other suitable blunt object by the roofing Subcontractor. Visible evidence that welding is proceeding acceptably is smoke during the welding operation, shiny membrane surfaces, and an uninterrupted flow of black material from the edge of completed joints. On-site evaluation of welded seams shall be made daily by the Subcontractor at locations as directed by the Owner's representative or membrane manufacturer's representative. Two-inch wide cross-sectional samples shall be taken three times a day minimum through completed seams. Correct welds display failure from shearing of the membrane prior to separation of the weld. Each test cut shall be patched by the Subcontractor at no extra charge to the owner.

D. PVC Membrane Flashings

1. All flashings shall be installed concurrently with the roof membrane as the job progresses. No temporary flashings shall be allowed without the prior approval of the architect and the membrane manufacturer. Approval shall only be for specific location on specific dates. If any water is allowed to enter under the new roofing due to incomplete flashings, the affected area shall be removed and replaced at the Subcontractor's expense. Flashings shall be adhered to compatible, dry smooth, and solvent-resistant surfaces.

2. Contact adhesive for flashings

   a. Over the properly installed and prepared substrate surface, contact adhesive shall be applied using approved solvent-resistant paint rollers. The adhesive shall be applied at a rate of approximately 2 gallons per 100 square feet of surface depending upon substrate. The adhesive shall be applied in smooth, even coatings with no holidays, globs, puddles, or similar irregularities. Only an area that can be covered completely in the same day's operations shall be coated with adhesive. The surface with adhesive coating shall be allowed to dry completely prior to installing the membrane.

      1) Drying time increase with cooler temperatures and high humidity conditions. The Subcontractor shall check with the Sarnafil technical representative prior to roof operations on such days.

      2) The Subcontractor shall count the amount of adhesive used per square, and shall count the number of buckets of adhesive used per area per day to verify that he is conforming to the specified adhesive rate.

b. When the surface is dry, the flashing membrane is cut to a workable length and the underside shall be coated evenly with adhesive at a rate of 2 gallon per 100 square feet. While the coated membrane shall be rolled carefully onto the previously coated substrate to avoid wrinkle. Do not allow adhesive on the underside of the membrane to dry completely. The amount of membrane that can be coated with adhesive before applying to substrate shall be determined by ambient temperature, humidity, and manpower. Adjacent sheets shall be overlapped a minimum of 4 inches. Flashings shall extend 5 inches onto the roofing membrane. The bonded sheet shall be pressed firmly into place with a hand roller.

c. No bonding adhesive shall be applied in lap areas that are to be welded to flashings or adjacent sheets. All sheets shall be applied in the same manner, lapping all sheets required by welding techniques.

3. Install Sarnastop fastened 12 inches on center with acceptable fasteners into the structural deck at the base of parapets, walls and curbs. Sarnastops shall also be installed at the base of fiberboard tapered edge strips and at transitions, peaks, and valleys according to Sarnafil's recommended details.

4. Manufacturer's requirements and recommendations and the specifications shall be followed. All material submittals shall have been accepted by membrane manufacturer prior to installation.

5. All flashings shall extend a minimum of 8 inches above roofing level unless previously accepted by the owner's representative and membrane manufacturer.

6. All flashing membranes shall be fully adhered to solvent-resistant substrates. All interior and exterior corners and miters shall be cut and hot-air welded into place. No bituminous elements shall be in contact with the membrane unless G459 membrane is used.

7. All flashings shall be hot-air welded at their joints and at their connections with the roof membrane.

8. All flashing membranes shall be mechanically attached along the top edge a metal termination bars predrilled at 8 inches on center. Expansion pins with nylon sheaths set in predrilled holes shall be used to secure flashings to masonry and concrete surfaces.

9. Flashings shall be terminated according to membrane manufacturer's recommended details.

E. Metal Flashings

1. Refer to drawings for locations of metal flashings.

2. Metal shall be installed to provide adequate resistance to bending and to allow for normal thermal expansion and contraction.

3. Metal joints shall be watertight.

4. Metal flashings shall have a 4-inch minimum nailing flange and shall be fastened into solid wood blocking with fasteners of the same type with two rows of annular ring nails, 4 inches on center, staggered. Fasteners shall penetrate the wood nailer a minimum of 1 5/8 inches.

5. Continuous metal hook strips are required if metal fascia exceeds 5 inches in width. Hook strip is to be fastened 12 inches on center into wood nailer or masonry wall.

6. Adjacent sheets of PVC clad metal shall be spaced ¼ inch apart. The end joints of the metal shall be fastened 6 inches on center. The joints shall be covered with 1 inch wide masking tape. A 4-inch wide strip of membrane flashing strip shall be hot-air welded over the joint.

7. PVC clad metal and other edge metal shall be installed according to Factory Mutual's Loss Prevention Data Sheet 1-49.

F. Installation of river rock ballast:

1. Install metal edging per article 3.06.

2. Install filter fabric per manufacturer's instructions.

3. Spread stones at rate of 1,000 lbs./100 sf. Spread to edges in a uniform layer.

4. Remove debris for neat finish appearance of raked stones.

3.06 INSTALLATION OF SHEET METAL AND FLASHINGS

A. Refer to the Drawings for locations of plain sheet metal and flashings.

B. General - All roof shall be flashed and made watertight at all edges and intersections of roofs with vertical surfaces of any nature, using metal flashing except as otherwise shown on the Drawings or specified hereunder.

1. Comply with SMACNA requirements unless otherwise indicated on the Drawings. In case of conflict the most stringent shall govern.

2. Generally, flashing and sheet metal work shall be in lengths not exceeding 8 feet and free from longitudinal joints. All flashing in contact with dissimilar metal shall be coated with asphalt paint. All joints in copper flashing shall be pre-tinned, locked and soldered. Expansion joints in running flashing work shall be formed by joining end of sheets together with a 3-inch loose lock, filled with sealant compatible with the roofing membrane. Expansion joints shall be installed every 24 feet in straight runs.

3. All new metal flashings in direct conjunction with membrane roofing system shall be installed over the roofing membrane. Flashing flanges, and edges extending onto roof shall extend a minimum of 4 inches onto the roof surfaces and be secured to wood nailers with specified nails spaced not more than 4 inches apart. Membrane flashing of the flanges must extend a minimum of 3 inches from the edge of the flange and from the nail line and shall be installed in strict accordance with the membrane manufacturer's requirements and the approved shop drawings. The edges of the flashing membrane shall be continuously caulked. Except where otherwise specified, no fasteners shall be exposed in the finished work.

4. Check all surfaces for nailing; verify wood backing.

5. Provide felt insulation between any ductwork and copper at contacts.

6. Clean all copper, using caustic soda hot water solution where metal is exposed. Tool solder work reasonably smooth.

C. Flashings shall be formed as indicated on the Drawings.

D. Continuous cleats – Install minimum 20-gauge galvanized steel cleat to profile indicated on the Drawings, spacing nails 12 inches on center.

E. Install asphalt resistant flashing at doghouse duct penetration with seam located at underside of ducts.

F. Other non-specified flashings - Fabricate flashings to profiles indicated, using as large sheets as practical.

3.07 PVC CLAD FLASHINGS

A. Refer to drawings for locations of PVC clad material.

B. Metal shall be installed to provide adequate resistance to bending and to allow for normal thermal expansion and contraction.

C. Metal joints shall be watertight.

D. Metal flashings shall have a 4-inch minimum nailing flange and shall be fastened into solid wood blocking with fasteners of the same type with two rows of annular ring nails, 4 inches on center, staggered. Fasteners shall penetrate the wood nailer a minimum of 14 inches.

E. Continuous metal hook strips are required if metal fascia exceeds 5 inches in width. Hook strip is to be fastened 12 inches on center into wood nailer or masonry wall.

F. Adjacent sheets of PVC clad metal shall be spaced ¼ inch apart. The end joints of the metal shall be fastened 6 inches on center. The joints shall be covered with 1-inch wide duct tape. A 4-inch wide strip of membrane flashing strip shall be hot-air welded over the joint.

G. PVC clad metal and other edge metal shall be installed according to Factory Mutual - Loss Prevention Data Sheet 1-49.

3.08 WALKWAY PAD INSTALLATION

A. Sarnatred V Installation

1. Roofing membrane to receive Sarntred Walkway shall be clean and dry. Place chalk lines on desk sheet to indicate location of Walkway. Apply a continuous coat of Sarnacol 2170 VC adhesive to the deck sheet and the back of the Walkway in accordance with Sika Sarnafil's technical requirements and press Walkway into place with a water filled, foam covered lawn roller. Clean the deck membrane in areas to be welded. Hot air weld the entire perimeter of the Walkway to the Sarnafil deck sheet. Check all welds with a rounded screwdriver. Re-weld any inconsistencies. Check existing deck membrane seams that are to be covered by Walkway with rounded screwdriver and re-weld any inconsistencies before Walkway installation. Do not run Walkway over Sarnabars.

3.09 TEMPORARY CUTOFFS

A. All flashings shall be installed concurrently with the roof membrane in order to maintain a watertight condition as the wok progresses. When a break in the day's work occurs in the central area of a roof, a temporary waterstop shall be constructed to provide a 100% watertight seal. When work on the new system is suspended, the stagger of the insulation joints shall be maintained by installing partial fillers. The new membrane shall be carried into the waterstop. The waterstop shall be sealed to the deck and/or substrate so that water shall not be allowed to travel under the new or existing roofing. The edge of the membrane shall be sealed in continuous heavy application of roof cement of 6 inches in width. When work resumes, the contaminated membrane shall be cut out. All sealant, contaminated membrane, insulation fillers, and other similar items shall be removed from the work area and disposed of off-site. None of these materials shall be used in the new work.

B. If inclement weather occurs while a temporary waterstop is in place, the Subcontractor shall provide the labor necessary to monitor the situation to maintain a watertight condition.

3.10 CLEANING

A. At the completion of the work, clean remove and cart away from the premises, all rubbish and accumulated materials and leave the work in a satisfactory condition.

B. All stains and/or damage to the exterior finish of the building caused by faulty workmanship and/or improper handling of materials in regard to the installation of roofing shall be cleaned or removed and replaced at the expense of the Roofing and Flashing Subcontractor.

C. Wash and rinse all metal work completely free from finger marks, smudges, labels, and other surface dirt.

3.11 ROOF PROTECTION

A. During the construction period after the installation of the roofing system, the General Contractor shall take strict precautions against unnecessary traffic on the roof surface.

B. After the satisfactory completion of all roofing and flashing work, the General Contractor shall be responsible for damages to the roof caused by work or materials of other trades.

END OF SECTION

SECTION 071326

AIR AND VAPOR BARRIERS

PART 1 GENERAL

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish and install the following, as shown on the Drawings and/or specified herein.

1. Continuous self-adhering membrane air barrier on new exterior wall and soffit construction including all necessary primers, sealants, spray foam insulation and similar items necessary to continuously seal the wall air and vapor barrier to adjacent construction (doors, roof, and similar items).
2. Repair wall and floor air and vapor barriers damaged by the work of other trades with self-adhering membrane.

B. This Subcontractor shall furnish, install and maintain in safe, adequate condition all staging and scaffolding that are necessary for the proper execution of the work of this section.

C. LEEDv4-S Requirements:

1. The work of this section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEEDv4-S Certification at “Silver” Level is an Owner Requirement that is critical to secure project funding from the Massachusetts School Building Authority. LEEDv4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.
2. For all adhesives and sealants, meet the LEEDv4-S requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
3. For all paints and coatings applied on site and inside the air and vapor barrier, meet the LEEDv4-S requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

4. Meet the LEEDv4-S requirements for MR Credit 2, Building Product Disclosure and Optimization – Environmental Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers' product documentation for each product having an Environmental Product Declaration (EPD).

D. Exterior Envelope Commissioning - Refer to SECTION 019113-BUILDING COMMISSIONING REQUIREMENTS.

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be performed under the designated SECTIONS:

1. Construction of mock-up: SECTION 014339-EXTERIOR MOCK-UPS.
2. Sheet membrane waterproofing, foundation Dampproofing and protection board: SECTION 070001-WATERPROOFING, DAMPPROOFING AND CAULKING.
3. Construction of masonry back up walls, compressible joint fillers in masonry, and membrane flashing in masonry walls and installing rigid wall insulation in exterior masonry veneer walls: SECTION 040001-MASONRY.
4. Compressible joint fillers in cast-in-place concrete, and underslab moisture barrier and insulation: SECTION 033000-CAST-IN-PLACE CONCRETE.
5. Wood blocking and back up construction at soffits, fascias, and roof edges: SECTION 061000-ROUGH CARPENTRY.
6. Roof vapor retarder, metal and membrane flashings, and sealants in conjunction with roofing: SECTION 070002-ROOFING AND FLASHING.
7. Metal framing, wall insulation installation, panels, flashings and internal sealants at prefinished metal wall and soffit panel system: SECTION 074213-PREFORMED CLADDING and SECTION 074251-PORCELAIN TILE WALL SYSTEM.
8. Internal sealants in conjunction with metal window, curtainwall and storefront systems: SECTION 080001-METAL WINDOWS.
9. Perimeter joint sealants at exterior and interior window, curtainwall and storefront systems including sealing window system to the air and vapor barrier: SECTION 080001-METAL WINDOWS.
10. Gypsum board / metal stud exterior wall construction including sheathing and continuous insulation retainer clips: SECTION 092116-GYPSUM WALLBOARD.

1.04 SUBMITTALS

A. Submit the following samples in accordance with the provisions of SECTION 013300-SUBMITTALS.

1. Joint bead material - 12-inch length.

2. Sealants and caulking materials, 3-inch strips of each specified type, in all available colors for selection by the Architect, applied to pieces of hardboard.

3. Air Barrier - not less than 6 by 12 inches of each type.

B. Include, with samples submission, complete manufacturer's specifications, installation instructions and application data, and duplicate copies of certifications of compliance to the designated Standards and Specifications set forth herein for all material, together with supporting test data and chemical composition of each material. Written approval of the Architect must be obtained for all samples and data before delivering any material to the project.

C. Manufacturer's data - Submit to the Architect copies of manufacturer's specifications and installation and application instructions for all herein specified, certified test results, recommendations for sealing penetrations and perimeters, and other data as may be required.

1. If a substitution of the specified product is proposed, the manufacturer shall provide documentation from a major testing laboratory that the product has successfully been tested in compliance with NFPA 285 in the designated wall assembly systems.

2. In the absence of such above documentation, the manufacturer of the proposed substituted product shall submit documentation that the product has been successfully tested in accordance with NFPA 285 as a component of a successfully tested NFPA 285 wall assembly.

3. In addition to Item 2, above, the proposed manufacturer of the substituted product shall engage a fire scientist to provide a written analysis of the design wall assembly concluding that the proposed substituted product, in the professional judgment of the fire scientist, will meet the performance requirements of NFPA 285 for the design wall assembly systems.

D. General Contractor Review-accompanying approval request, submit to the Architect written statement signed by the Sub-contractor, stating that the Architect’s drawings and specifications for materials herein specified have been reviewed with an agent or the manufacturer of the primary materials and that he is in agreement that the selected systems and all other materials herein specified are proper, compatible and adequate for the application shown, and the conditions and details are not in conflict with the respective warranties. Show by copy of transmittal from that copy of statement that has been transmitted to respective manufacturers.

E. Shop Drawings for Air Barrier Membrane Mockup: Submit project specific shop drawings for mockup indicating size of mockup, details of construction, and expansion and control joints. Include relationship with adjacent materials, sequence of installation and materials and methods for sealing penetrations. Obtain approval of shop drawings prior to construction of mockup. Revise to show changes necessary to obtain approval of mockup.

F. Shop Drawings: Submit dew point analysis of wall and roof assemblies and shop drawings indicating details of construction, including expansion and control joints. Include relationship with adjacent materials, sequence of installation and materials and methods for sealing penetrations. At a minimum, shop drawings shall include details of the following connections, as applicable to the project:

1. Foundation and walls.
2. Walls and windows or doors.
3. Different wall systems.
4. Wall and roof.
5. Walls, floor and roof across construction, control and expansion joints.
6. Walls, floors and roof to utility, pipe and duct penetrations.
7. Walls and roof over unconditioned space.

G. Qualifications of Installer: Submit qualifications of firm installing air barrier membrane materials, including name and qualifications of supervisor for this project, and including name and location of three projects where similar work was performed by both firm and supervisor.

H. Mockups of Air Barrier Membrane Installation: Designate an area of the building to integrate the air barrier into the exterior wall as a mockup for approval by the Architect. Mockup shall show connection between wall and roof, and wall and window assembly. Mockup shall use actual air barrier membrane materials. Provide several mockups if necessary to include the various conditions. Remove mockup assemblies that are not approved. Rebuild mockups which are not approved at no additional cost to the Owner.

1. Refer to SECTION 014339-EXTERIOR MOCK-UPS for additional mock-up requirement.

2. Final Mock-Up: Following the Architect's review and approval of the mock-up panel, including those portions of the panel furnished and installed under other SECTIONS, a final mock-up final shall incorporate all approved materials, colors and methods of installation. This final mock-up shall be left on site to serve as the reference standard for appearance and workmanship as the work progresses. This Subcontractor shall, at no additional cost to the Owner, rebuild the portions of the mock-up furnished and installed under this SECTION using the final approved materials, colors and construction to complete the final mock-up.

I. LEED for Schools Submittals (Refer to SECTION 013300-SUBMITTALS):

1. Relevant supporting documentation required by LEED for Schools v4 and as detailed in Section 018113-Sustainable Design Requirements.

2. A completed LEED MATERIALS REPORTING FORM, per Section 018113-SUSTAINABLE DESIGN REQUIREMENTS.

3. Product substitution requests are subject to additional LEEDv4-S submittal requirements, see SECTION 012500-SUBSTITUTION PROCEDURES.

1.05 AIR BARRIER PRECONSTRUCTION CONFERENCE

A. Preconstruction conference – prior to the commencement of any construction work, a preconstruction conference shall be held.

B. After approval of all materials and prior to installation, a air barrier preconstruction conference shall be held at the job site. In attendance shall be (1) Architect, (2) Owner's Project Manager, (3) Commissioning Agent, (4) General Contractor, (5) Air Barrier Subcontractor, and (6) Manufacturer's representative.

C. The parties shall review Drawings, specifications and approved materials.

Correct conflicts, if any, between approvals and specification requirements. Examine job site conditions, including inspection of substrate, material labels and methods of storing materials. Review installation procedures, scheduling and temperature requirements, and establish protection methods for finished waterproofing from other trades.

D. Pre-Construction Meeting: After approval of mockup shop drawings, but prior to construction of mockup, convene a meeting with representatives of materials to be incorporated in the mockup and installers of mockup. Agenda shall include sequence and details of construction to ensure continuity of air barrier.

E. Pre-Installation Meeting: Convene a pre-installation meeting a minimum of one week prior to commencing work of this section. Attendees shall include representatives of air barrier manufacturer, exterior wall installers and project superintendent. Agenda shall include the following:

1. Review of approved submittals.
2. Review of mock-ups.
3. Coordination with sequence of installation with adjacent materials.
4. Schedule for subsequent work covering air barrier.
5. Procedures for quality assurance.

1.06 WARRANTY

A. This Subcontractor shall execute a written guarantee direct to the Owner, warranting all AVB system specified herein for a period of **one (1) year** after date of Substantial Completion of the building. Any imperfections as a whole or in part, by reason of defective materials, workmanship or arrangement of the various parts shall be made good to the satisfaction of the Owner at this Subcontractor's expense.

B. Silicone Sealant Systems

1. Manufacturer for the work of this SECTION shall review the Contract Documents, Shop Drawings and inspect the installation, and upon approval issue a standard 20-year warranty.

1.07 QUALITY ASSURANCE

A. The Subcontractor shall, for all materials and systems specified herein, submit a letter from each respective manufacturer certifying this Subcontractor is an authorized applicator.

1.08 PERFORMANCE REQUIREMENTS

A. Commonwealth of Massachusetts Building Code Requirements: The intent of this specification is to require compliance with 780 CMR 13, including Section 1304.3, Air Leakage.

B. Air and vapor barrier shall be NFPA 285 compliant and comply with the following ASTM standards:

1. E84 – Test Method for Surface Burning Characteristics of Building Materials.
2. E96 – Test Method for Water Vapor Transmission of Materials
3. E1677 – Specification for Air Retarder Material or System for Framed Building Walls

4. E2178 – Test Method for Air Permanence of Building Materials
5. E2357 – Standard Test Method for Determining Air Leakage of Air Barrier Assemblies
6. E2266 – Standard Guide for Design and Construction of Low-Rise Frame Building Wall Systems to Resist Water Intrusion
7. E241 – Standard Guide for Limiting Water-Induced Damage to Buildings

C. Code 780 CMR 1304.3.1, Air Barriers: The building envelope shall be designed and constructed with a continuous air barrier to control air leakage into or out of the conditioned space. An air barrier shall also be provided with interior partitions between conditioned space and space designed to maintain temperature or humidity levels which differ from those in the conditioned space by more than 50 percent of the difference between the conditioned space and design ambient conditions. The air barrier shall have the following characteristics:

1. It must be continuous, with all joints made air tight.
2. It shall have an air permeability not to exceed 0.004 cubic feet per minute per square foot under a pressure differential of 0.3 inches of water as tested in accordance with ASTM E-2178.
3. It shall be capable of withstanding positive and negative design wind, fan and stack pressures on the envelope without damage or displacement, and shall transfer the load to the structure. It shall not displace adjacent materials under full load.
4. It shall be durable or maintainable.
5. The air barrier shall be joined in an air tight and flexible manner to the air barrier material of adjacent systems, allowing for the relative movement of systems due to thermal and moisture variations and creep. Connection shall be made between:
    a. Foundations and walls.
    b. Walls and doors.
    c. Different wall systems.
    d. Wall and roof.
    e. Wall and roof over unconditioned space.
    f. Walls, floor and roof across construction, control and expansion joints.
    g. Walls, floors and roof to utility, pipe and duct penetrations.

D. Code 780 CMR 1304.3.2, Air Barrier Penetrations: All penetrations of the air barrier and paths of air infiltration/exfiltration shall be made airtight.

Design Intent: Air barrier membrane shall be located, constructed and flashed to perform as an air and water barrier to discharge to the outside any incidental condensation or water penetration. Air barrier membrane shall accommodate movements of building materials by providing expansion and control joints with appropriate air seal materials at such locations, changes in substrate and perimeter conditions.

1.09 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Each container must bear an unbroken seal, test number, and label of the manufacturer upon delivery to the site. Failure to comply with these requirements shall be sufficient cause for rejection of the material in question by the Architect and his requiring its removal from the site. New materials conforming to said requirements, shall be promptly furnished at no additional cost.

1.10 JOB CONDITIONS

A. Weather conditions must be dry and of the proper temperature during application operations. Surfaces receiving work of this SECTION must be absolutely dry and dust free. All joints receiving sealants and caulking materials shall be subject to the approval of the materials manufacturer for proper use of the specified materials.

B. Adjacent surfaces must be protected from damaged work performed under this SECTION.

1.11 FIELD ADHESION TESTS

A. Perform adhesion tests on samples of peel and stick vapor barrier applied to prepared substrates at the site to assure that the proposed materials and installation procedures achieve adequate adhesion and that the optimum primers are selected. The General Contractor shall schedule the testing and report the results at no additional cost to the Owner. The General Contractor shall request the sealant manufacturer's technical representative visit the site to assist with adhesion testing.

B. Perform jobsite sealant adhesion tests in accordance with the following:

1. Apply three sealant test strips to each jobsite substrate. Prepare three samples for each type of sealant proposed on each substrate.

2. Sealant test strips shall be a minimum of 4 inches long at each location. Apply a 1 inch wide strip of bond breaker tape across the edge of each test specimen to produce a tab for gripping the specimen during testing.

3. Prepare additional test samples for each primer or substrate preparation technique recommended by the sealant manufacturer. For substrates where adhesion may benefit from the use of a primer, prepare test strips with and without primer to evaluate the effect on adhesion.

4. Locate sealant test strips in areas approved by the Owner in advance. Remove all traces of sealant test residue on substrates to remain.

5. Install sealant sufficiently in advance of general sealant application to allow time for curing and testing, and in no case less than three weeks in advance.

6. After curing for at least three weeks, forcibly remove sealant test strips to check on the sealant adhesion. Failure must be by tearing within the sealant itself (cohesive failure). Sealant test samples that fail adhesively (that is, by pulling cleanly away from the substrate leaving little or no sealant residue) are unacceptable.

7. If sealant fails adhesively, modify sealant application procedures as recommended by the sealant manufacturer and repeat testing until satisfactory adhesion is achieved.

8. Notify Architect at least 48 hours prior to the installation of test samples and 48 hours in advance of performing pull-tests so that he can be present to observe the installation.

9. Provide a written report to the Architect describing the testing, the results, and the recommendations of the sealant manufacturer.

PART 2 PRODUCTS

2.00 LEEDv4-S REQUIREMENTS

A. Products and materials used for this section of the work are required to meet the following criteria for LEEDv4-S materials Credits, and a completed LEEDv4 MATERIALS REPORTING FORM shall be submitted for all materials in this SECTION:

1. Recycled Content. (See Section 018113 Sustainable Design Requirements for overall project recycled content requirements.) The General Contractor shall examine each product or material specification below for a stated minimum recycled content requirement, and if none is stated, the requirements under 018113 shall govern.

2. Regional Content. (See Section 018113 Sustainable Design Requirements for overall project regional content requirements.) The General Contractor shall examine each product or material specification below for a stated minimum regional content requirement, and if none is stated, the requirements under 018113 shall govern.

3. Furnish any adhesives, sealants, paints and coatings such that they meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

2.01 MATERIALS REQUIREMENTS

A. Deliver each material in manufacturer's unopened container or bundles, fully identified with brand, type, grade, class, and all other qualifying information.

B. Storage of Materials - Store all materials in properly protected and dry storage facilities until ready for use. Installation of wet or damp materials will not be accepted. Do not use materials which have been damaged in any manner.

C. Protect work from damage during construction period so that it will be without indication of abuse or damage at time of acceptance.

D. Protect the building from damage resulting from spillage, dripping, and dropping of materials. Repair and restore other work damaged during roofing operations.

E. Prevent waterproofing materials from running into the drains, clogging rain water conductors.

F. Take all necessary precautions against fire and other hazards, during delivery, storage, and installation of inflammable adhesives, solvents, and other materials specified herein. Comply with local ordinances and fire regulations in the installation of hazardous materials specified or required under this SECTION.

2.02 SELF-ADHERING AIR AND VAPOR BARRIER MEMBRANES

A. Self-Adhering Air and Vapor Barrier Membrane: Self-adhering, self-sealing membrane of inherent fire-resistant 40 mil composite consisting of foil-faced glass laminated with a fire-resistant, factory applied pressure sensitive adhesive.

1. To establish a standard of quality, design and function required, specifications are based on Carlisle 705FRA self-adhering barrier in widths to comply with job conditions.
2. Similar LEED-S compliant membranes by Grace Construction Products, York Manufacturing, or other manufacturer will be considered by the architect as an equal upon receipt of adequate supporting data.
3. **Refer to Article 1.04, Submittals, paragraph C for required documentation confirming compliance with NFPA 285.**

B. Transition Materials: To provide an air barrier between the membrane and adjacent materials (except window, curtainwall and storefront systems), provide transition materials consisting of extruded low-modulus silicone sheet and silicone sealant designed to adhere to polyethylene side of membrane and adjacent material. Provide the following materials as acceptable to the manufacturer of the air barrier membrane and meeting the VOC requirements of SCAQMD, Rule 1168.

1. Cleaning Agent.
2. Silicone Sheet: SIL-SPAN Preformed Silicone Profiles by Pecora or ULTRASPAN Weatherstripping by General Electric. Provide preformed corners.
3. Silicone sealant: Low modulus single component silicone sealant compatible with sealants furnished and installed under SECTION 070001- WATERPROOFING, DAMPPROOFING AND CAULKING, SECTION 074213 – PREFORMED CLADDING, SECTION 080001-METAL WINDOWS and SECTION 074251-PORCELAIN TILE WALL SYSTEM.
4. Carlisle Window and Door Flashing.

5. EPDM Transition Strips - Used when maintaining continuity across expansion joints, and/or when adhered to extruded polystyrene insulation or when application of a rubberized asphalt membrane will stain exposed to view sealants: Carlisle Elastoform. Similar EPDM Transition Strips by Firestone Building Products, Johns Mansville or other manufacturers will be considered by the architect as an equal upon receipt of adequate supporting data.

6. Spray Foam Insulation - Compatible with air and vapor barrier and transition materials, used to fill metal deck flutes to create a consistent plane for sealing A&VB to metal deck.

PART 3 EXECUTION

3.01 SELF-ADHERING AIR BARRIER MEMBRANES

A. System Selection - The air vapor barrier Subcontractor shall apply a self-adhering barrier. Only a self-adhering barrier may be used to repair damage caused by work of other trades only.

B. Clean substrate surfaces to receive air barrier membrane in accordance with manufacturer's instructions. Apply primer if recommended by manufacturer.

C. Strictly comply with air barrier membrane manufacturer's printed instructions, approved submittals and the following:

1. Apply materials within manufacturer's requirements for temperature and weather conditions.
2. Do not apply to wet or frozen substrates.
3. Do not allow contamination with dust or dirt.
4. Seal completely at edges, perimeter and penetrations.
5. Provide expansion control at all intermediate horizontal floor levels.

D. Protect installed work from damage due to harmful weather exposures, physical abuse, and other causes.

E. Provide temporary protection over air barrier membrane if materials covering air barrier membrane shall not be installed within manufacturer's recommended time limit for exposure.

F. **Repair damage to air barrier membrane caused by construction activities or subsequent work prior to covering. If exposed for a period greater than manufacturer's maximum time limit requirement, install new membrane over existing per manufacturer's requirements.**

3.02 CLEANING

A. Clean all surfaces of adjacent surfaces that have been marked or soiled by the work of this SECTION, removing all excess mastics, sealants, and caulking materials there from. Use only cleaning materials and solvents which shall not damage the surfaces in any way.

END OF SECTION

SECTION 072100

INSULATION

PART 1 GENERAL

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish and install the following:

1. Spray applied polyurethane foam at concrete foundation and retaining walls below-grade furred wall construction.
2. Spray applied polyurethane foam at penetrations of exterior walls, including around structural steel members, and underside of roof drain structures. Sprayfoam at deck flutes where indicated on Drawings. Sprayfoam at exterior soffits below occupied floors. Maintain continuous building insulation and continuity of air/vapor barrier and where shown on the drawings.

B. Furnish the following for installation under the designated SECTIONS.

1. Provide insulation for mock-up exterior wall panels as specified under SECTION 014339-EXTERIOR MOCK-UPS.
2. Sound attenuating mineral wood batt insulation at interior partitions: SECTION 061000-ROUGH CARPENTRY and SECTION 092116-GYPSUM WALLBOARD.
3. Rigid wall insulation at masonry veneer walls having masonry back up: SECTION 040001-MASONRY.
4. Rigid wall insulation at metal stud back up walls for exterior masonry, metal and fiber cement panels: SECTION 040001-MASONRY, SECTION 074213-PREFORMED CLADDING and SECTION 074247-FIBER REINFORCED CONCRETE PANEL RAINSCREEN SYSTEM.
5. Rigid wall insulation at doghouse walls: SECTION 070002-ROOFING AND FLASHING.
6. Semi-rigid wall insulation at metal stud back up for phenolic wall and soffit panels: SECTION 074233-PHENOLIC RAINSCREEN SYSTEM.
7. Semi-rigid insulation at aluminum soffits as called for on the Drawings: SECTION 074213-PREFORMED CLADDING

8. Semi-rigid insulation at fiber cement panel soffits: SECTION 074247-FIBER REINFORCED CEMENTITIOUS PANEL RAINSCREEN SYSTEM.

9. Semi-rigid insulation at aluminum curtainwall spandrel panels: SECTION 080001-METAL WINDOWS.

10. Insulation at top of masonry at corrugated metal deck and at structural members penetrating masonry walls: SECTION 061000-ROUGH CARPENTRY.

11. Smoke and firesafing insulation at fire rated masonry walls: SECTION 040001-MASONRY.

C. LEEDv4-S Requirements:

1. The work of this section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEEDv4-S Certification is an Owner Requirement that is critical to secure project funding from the Massachusetts School Building Authority. LEEDv4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.

2. For all adhesives and sealants, meet the LEEDv4-S requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

3. For all paints and coatings, meet the LEEDv4-S requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

D. Exterior Envelope Commissioning – Refer to SECTION 019113-BUILDING COMMISSIONING REQUIREMENTS.

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be furnished and installed by the designated SECTIONS:

1. Construction of mock-up: SECTION 014339-EXTERIOR MOCK-UPS.

2. Underslab rigid insulation and vapor barrier: SECTION 033000-CAST-IN-PLACE CONCRETE.

2. Rigid insulation in conjunction with membrane roofing system: SECTION 070002-ROOFING AND FLASHING.

3. Continuous membrane air and vapor barrier: SECTION 071326-AIR AND VAPOR BARRIERS.

4. Rigid insulation in conjunction with below grade dampproofing and waterproofing systems: SECTION 070001-DAMPPROOFING, WATERPROOFING & CAULKING.

5. Fabric covered acoustical wall panels: SECTION 098400-ACOUSTICAL WALL TREATMENT.

6. Firesafing and smoke stopping (except as specified elsewhere): By Sub-trade making penetrations.

7. Doghouse insulation: SECTION 070002-ROOFING AND FLASHING.

1.04 SUBMITTALS

A. Submit complete shop drawings in accordance with SECTION 013300-SUBMITTALS.

B. Shop drawings shall include manufacturer's specifications, and installation instructions and details.

C. Manufacturer's data - Submit to the Architect copies of manufacturer's specifications and installation and application instructions for all herein specified, certified test results, compliance with NFPA 285, recommendations for sealing penetrations and perimeters, and other data as may be required.

1. If a substitution of the specified product is proposed, the manufacturer shall provide documentation from a major testing laboratory that the product has successfully been tested in compliance with NFPA 285 in the designated wall assembly systems.

2. In the absence of such above documentation, the manufacturer of the proposed substituted product shall submit documentation that the product has been successfully tested in accordance with NFPA 285 as a component of a successfully tested NFPA 285 wall assembly.

3. In addition to Item 2, above, the proposed manufacturer of the substituted product shall engage a fire scientist to provide a written analysis of the design wall assembly concluding that the proposed substituted product, in the professional judgment of the fire scientist, will meet the performance requirements of NFPA 285 for the design wall assembly systems.

D. Submit letters from insulation material manufacturers confirming compatibility with adjacent system materials.

E. Submit samples of submitted insulation materials.

F. Provide insulation for mock-up exterior wall panels as specified under SECTION 014339-EXTERIOR MOCK UPS.

G. LEED for Schools Submittals (Refer to SECTION 013300-SUBMITTALS).

1. Relevant supporting documentation required by LEED for Schools v4 and as detailed in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

2. A completed LEED MATERIALS REPORTING FORM, per SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

3. Product substitution requests are subject to additional LEEDv4-S submittal requirements. Refer to SECTION 012500-SUBSTITUTION PROCEDURES.

1.05 DELIVERY, STORAGE & HANDLING

A. Verify thermal insulation products bear the appropriate markings of Underwriters Laboratories.

B. Products shall be delivered to the site in original unopened packaging clearly marked with manufacturer's information, product type, size, grade, use, lot or batch number and quantity.

C. Protect material from UV and the weather per manufacturer's requirements. Store pallets off the ground and provide spaces to separate materials and allow for air circulation.

PART 2 PRODUCTS

2.00 LEEDv4-S REQUIREMENTS

A. Products and materials used for this section of the work are required to meet the following criteria for LEEDv4-S materials Credits, and a completed LEEDv4 Materials Reporting Form shall be submitted for all materials in this SECTION:

1. Recycled Content. (See Section 018113 Sustainable Design Requirements for overall project recycled content requirements.) The Contractor shall examine each product or material specification below for a stated minimum recycled content requirement, and if none is stated, the requirements under 018113 shall govern.
2. Regional Content. (See Section 018113 Sustainable Design Requirements for overall project regional content requirements.) The Contractor shall examine each product or material specification below for a stated minimum regional content requirement, and if none is stated, the requirements under 018113 shall govern.
3. Furnish all adhesives and sealants such that they meet the LEEDv4-S requirements for IEQ Credit 2 as defined in SECTION 018113- SUSTAINABLE DESIGN REQUIREMENTS.
4. Furnish any paints and coatings such that they meet the LEEDv4-S requirements for IEQ Credit 2 as defined in SECTION 018113 - SUSTAINABLE DESIGN REQUIREMENTS.
5. Furnish any ceiling and wall system components, including gypsum board products, insulation, acoustical ceiling systems and wall coverings, such that they meet the LEEDv4-S requirements for IEQ Credit 2 as defined in SECTION 018113 - SUSTAINABLE DESIGN REQUIREMENTS.

2.01 MATERIALS

A. Sound attenuating mineral wool batt insulation in partitions where designated on Drawings, a minimum of 3 inches thick, with a minimum NRC of 1.05 and a minimum density of 2.0 lbs./ft.

1. Unfaced sound attenuating mineral wool blankets as manufactured by Rockwool “AFB Evo”, Manville “Mineral Wool Sound Attenuation Fire Batts (SAFB)”, Owens Corning “Thermafiber SAFB FF” or approved equal and conforming to ASTM E-84.
2. At chase walls, batt insulation shall be provided in both LGMF partition rows at acoustic partitions and where otherwise indicated on the Drawings.

B. Rigid Thermal Insulation in cavity of masonry veneer walls, metal panel walls and fiber reinforced cementitious panel rainscreen system.

1. It is the intent of the SECTION that only one rigid insulation manufacturer and product be furnished regardless of the number of subcontractors installing same.

2. Glass-fiber reinforced polyisocyanurate foam core faced with smooth, acrylic-coated aluminum on one side and smooth aluminum on other side, "Thermax Square Edge" by Dow Chemical Co., Atlas "Energy Shield Pro," R-Max "Durasheath-3" or an approved equal complying with ASTM C1289, Type 1, Class 1, meeting IBC requirements for foam plastic insulation.

    a. **Refer to Article 1.04, Submittals, paragraph C for required documentation confirming compliance with NFPA 285.**

C. Spray Applied Polyurethane Foam in Furred Stud Space at Concrete Foundation and Retaining Walls, one inch thick, R-6.7

1. Two component spray polyurethane closed cell plastic foam, Styrofoam Polyurethane Spray Foam CM-2060, having a core density of 2.2 pct per ASTM D1622 with an R-value of 6.5 per inch, Demilev "Heat Lok Soy-200", having a core density of 2.1 pcf per ASTM D1622 with an R-value of 6.6 per inch, NCFI Poyurethane "InsulBloc" spray foam with a core density of 2.0 pcf per ASTM D1622 with an R-value of 6.8 per inch or an approved equal.

    a. Insulation installed inside the building shall be certified by the manufacturer and an independent laboratory that it meets LEEDv4-S Low-Emitting Materials Criteria (Section 01350).

    b. Refer to Article 1.04, Submittals, paragraph C for required documentation confirming compliance with NFPA 285.

D. Spray Applied Polyurethane Foam in Voids, Penetrations and Decking

1. Two component spray polyurethane closed cell plastic foam, Demilec "Heat Lok Soy-200," having a core density of 2.1 pcf per ASTM D1622 with an R-value of 6.6 per inch, NCFI Polyurethanes "InsulBloc" spray foam with a core density of 2.0 pcf per ASTM D1622 with an R-value of 6.8 per inch, Bayer Materials Science "Bayseal CC-X" having a core density of 2.0 pcf per ASTM D1622 with an R-value of 6.9 per inch or an approved equal.

2. Two-part Kits: Dow "Froth-Pak" or approved equal. May be used for out of sequence work as approved by the Architect. Kits shall provide minimum R-value of 6.6 per inch and have a core density of 1.75 per ASTM D1622.

E. Firesafing: Insulation at Fire Rated Masonry Walls

1. Thermafiber mineral fiber safing insulation and caulking as manufactured by US Gypsum Co., Knauf Insulation, Owens Corning or an approved equal.

   a. Insulation installed inside the building shall be certified by the manufacturer and an independent laboratory that it meets Low-Emitting Materials Criteria.

F. Semi-Rigid Thermal Insulation R4.3 per inch, in sizes as called for on the Drawings

1. Faced mineral wool fiber board, four inches thick and in other thicknesses as shown on the Drawings as manufactured by Roxul, Inc. “CavityRock DD”, Thermafiber, Inc. “RainBarrier 45”, Johns Manville “Thermafiber” or an approved equal conforming to ASTM C 612, Type I.

PART 3 EXECUTION

3.01 INSTALLATION

A. Insulation shall be installed under SECTION 040001-MASONRY, SECTION 061000-ROUGH CARPENTRY, SECTION 074213-PREFORMED CLADDING, SECTION 074233-PHENOLIC RAINSCREEN SYSTEM, SECTION 074247-FIBER REINFORCED CEMENTITIOUS PANEL RAINSCREEN SYSTEM and SECTION 092116-GYPSUM WALLBOARD. Provide all manufacturer approved application instructions for the various types of insulation specified hereunder.

B. Installers shall be advised of manufacturer's protection requirements to ensure that materials are not at risk of exposures that may be deleterious to the materials and products.

END OF SECTION

SECTION 074213

PREFORMED CLADDING

PART 1 GENERAL

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION. B.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish and install the following as shown on the Drawings and specified herein:

1. Complete Preformed Aluminum cladding systems from the AVB outward, including:
    a. Prefinished, preformed aluminum skinned composite metal (ACM) rainscreen systems including wall and soffit panels, copings, flashing, trim, metal sub-girt framing, mounting clips and all required fasteners.
    b. Prefinished, preformed aluminum single skin wall panels, flashings, fascias, flashing, trim and all required fasteners.
    c. Prefinished, preformed aluminum single skin soffit panels, flashing, trim and all required fasteners.
    d. Prefinished coping, flashing, trim and all required fasteners at the perimeter of Phenolic Rainscreen and Fiber Reinforced Cementitious Panel Rainscreen systems except as noted in Paragraph 1.02.B, below.
    e. Galvanized z-girt system including z-shaped girts, hat channels and other LGMF shapes, and all required fasteners.
2. Complete HVAC roof screen systems attaching directly to structural steel:
    a. Prefinished, preformed aluminum single skin roof screen panel, flashings, trim and all required fasteners.
    b. Galvanized LGMF hat channels, other LGMF shapes and all required fasteners.
3. Prefinished, preformed aluminum column covers for interior applications and all required supports and fasteners.
4. Prefinished downspouts, mounting brackets / straps and all required fasteners.

B. Furnish the following for installation under the designated SECTION:

1. Preformed and prefinished sill flashing and base wall flashing components: SECTION 040001-MASONRY, SECTION 070002-ROOFING AND FLASHING, SECTION 074233 PHENOLIC RAINSCREEN SYSTEM, SECTION 074247-FIBER CEMENT REINFORCED CEMENTITIOUS PANEL RAINSCREEN SYSTEM and SECTION 080001-METAL WINDOWS.

2. Preformed ~~scuppers and~~ parapet caps/copings: SECTION 070002-ROOFING AND FLASHING.

C. Install the following items as furnished under the designated SECTIONS:

1. Rigid cavity wall insulation behind preformed metal wall panels: SECTION 072100-INSULATION.

D. LEEDv4-S Requirements:

1. The work of this section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEED-S Certification at "Silver" Level is an Owner Requirement that is critical to secure project funding from the Massachusetts School Building Authority. LEEDv4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.

2. Meet the LEEDv4-S requirements for MR Credit 2, Building Product Disclosure and Optimization – Environmental Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers' product documentation for each product having an Environmental Product Declaration (EPD).

E. Exterior Envelope Commissioning – Refer to SECTION 019113-BUILDING COMMISSIONING REQUIREMENTS.

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be performed under the designated Sections:

1. Construction of mock-up: SECTION 014339-EXTERIOR MOCK-UPS.

2. Structural steel framing: SECTION 051200-STRUCTURAL STEEL FRAMING.

3. Metal stud framing and exterior sheathing to receive rigid insulation cladding: SECTION 092116-GYPSUM WALLBOARD.

4. Continuous air and vapor barrier: SECTION 071326-AIR AND VAPOR BARRIERS.

5. Installation of exterior rigid insulation behind masonry veneer and fiber cement: SECTION 040001-MASONRY and SECTION 074247-FIBER REINFORCED CEMENTITIOUS PANEL RAINSCREEN SYSTEM.

6. Installation of semi-rigid insulation behind exterior phenolic panels: SECTION 074233-PHENOLIC RAINSCREEN SYSTEM.

7. Phenolic and fiber reinforced cementitious panels, subframes and z-girts: SECTION 074233-PHENOLIC RAINSCREEN SYSTEM and SECTION 074247-FIBER REINFORCED CEMENTITIOUS PANEL RAINSCREEN SYSTEM.

8. Membrane roofing systems, snap-on prefinished fascias, PVC clad and sheet metal flashing and fascia and related flashings: SECTION 070002-ROOFING AND FLASHING.

9. Window, curtainwall, aluminum entries and storefront systems and trim and louvers incorporated into window systems: SECTION 080001 – METAL WINDOWS.

10. Roof drains and downspout boots: SECTION 220001-PLUMBING.

11. Intercom, fire alarm, door operator actuators and other electric devices mounted in preformed cladding panels: SECTION 260001-ELECTRICAL and DIVISIONS 27 and 28.

1.04 SUBMITTALS

A. Submit the following in accordance with the provisions of SECTION 013300-SUBMITTALS.

B. Product Data for each type of cladding specified. Include technical data, material descriptions, dimensions of standard components and profiles, standard system construction details, test data, finish data and cleaning and maintenance instructions.

C. Samples:

1. Two, minimum 1 in x 2 in, color chips demonstrating match for each specified color for approval. Provide separate sets of two samples for ACM, single skin wall, single skin soffit and brake metal trim if sourced from different coating manufacturers.

2. Two, minimum 12” long, samples of each single skin panel in approved color.

3. One, minimum 6” long, sample of downspout with bracket/strap in approved color.

4. ACM System & Roof Screen Sample Panels: Before construction of the exterior mock-up panel structure, construct sample panels of the proposed ACM wall panel system and the Roof Screen system. System sample panel shall be in the approved color match.. Each system sample panel shall be not less than 24 x 24 inches. System sample panels shall be constructed as a cut away, showing all elements of construction and installation requirements for the panel system. Revisions, if required, shall be incorporated into the mock-up panel structure.

5. One 6" long sample of each size and gauge of Z-grit , hat channel & other LGMF members proposed for use.

D. Shop Drawings: Show fabrication and installation layouts of ACM and single skin wall and soffit panels. Include details of all edge conditions, joints, panel profiles, corners, anchorages, attachment systems, trim, flashings, closures, and accessories and special details. Distinguish among factory, shop, and field-assembled work. Shop drawings shall include:

1. Panel elevations, sections, and dimensions.
2. Panel thicknesses and fastener type and size. Note on elevations & details all locations of exposed fasteners where specified concealed is not possible
3. Joint and connection details.
4. Subframing arrangement, gauges and sizes, bracing and connection details
5. Erection details.
6. Panel cut-outs for Mechanical, Electrical, Plumbing, and Security devices and items.
7. Details of Z-girt and other LGMF systems including attachment to structure.
8. Erection sequence for special conditions.
9. Relationship of the preformed cladding systems to adjacent materials.
10. Shop Drawings for Mockups shall include elevations, sections, full-size details, and relationship to adjacent materials.

E. Provide design calculations for panels, fasteners, subframe and Z-girt systems including all fasteners with the shop drawings. Calculations and shop drawings shall be stamped by an engineer registered in the Commonwealth of Massachusetts.

F. Manufacturer's Certification Finish applicator (s) to provide written notification of approval from paint manufacturer (s) stating applicator is approved by manufacturer to apply the specified finish.

G. Fabricator Experience & References, submit:

1. Experience record showing the fabricator/installer's training and experience in similar work.

2. List and give brief description of similar work, satisfactorily completed, with location, date of contracts, together with names and addresses of owners.

H. Test Results – For each test indicated under Article titled: Performance Requirements below, submit complete test results and detail drawings of the test from an approved independent test facility.

I. Warranties: Sample of manufacturer's standard warrantees.

J. LEED for School Submittals:

1. Relevant supporting documentation required by LEED for Schools v4 and as detailed in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

K. Maintenance Stock: Provide Owner with one quart of touch up paint for each color panel. Submit to the Architect a signed letter of receipt stating that Owner has taken possession of materials.

1.05 COORDINATION OF ALUMINUM FINISH

A. Preformed aluminum ACM and single skin cladding panels, copings, flashing and trim to be furnished and installed under this section shall match in color and finish items furnished under the following Sections:

1. SECTION 070002-ROOFING AND FLASHING : Snap-on roof fascias and flashing.

2. SECTION 080001-METAL WINDOWS: Aluminum windows, curtainwalls, storefronts, doors and trim.

B. It shall be the responsibility of both the Preformed Cladding Subcontractor and the General Contractor to jointly coordinate the finish operation with the other listed trades to achieve a uniform finish.

1.06 MOCK-UP PANEL STRUCTURE

A. Provide and install all preformed cladding at the Exterior Mockup structure as shown on the Drawings. Mock-up structure shall include panels, insulation, trim, all sub-framing, Z-girts and transitions to adjacent materials as shown on the mock-up drawings. Mock-up shall use the final approved materials, colors and construction indicated on approved shop drawings. Deficiencies shall be corrected on the Mock-up prior to the start of work on the building at no additional cost to the owner. The mock-up structure shall be left on site to serve as the reference standard for appearance and workmanship as the work progresses.

B. Refer to the Drawings and SECTION 014339-EXTERIOR MOCK-UPS for sizes, configuration and other requirements for the mock-up panel structure.

C. Approval of mock-ups does not constitute approval of deviations from the Contract Documents contained in mock-ups unless Architect specifically approves such deviations in writing.

D. Mock-up panel structure will not remain as part of the Work.

1.07 REFERENCE STANDARDS

A. SMACNA, Architectural Sheet Metal Manual (latest edition).

B. American Architectural Manufacturer's Association (AAMA):

1. AAMA 508-07 – Voluntary Test Method and Specifications for Pressure Equalized Rain Screen Wall Cladding Systems
2. AAMA 509 – Voluntary Test and Classification Method for Drained and Back Ventilated Rain Screen Wall Cladding Systems.
3. AAMA 620 – Voluntary Specification High Performance Organic Coatings on Coil Coated Architectural Aluminum.
4. AAMA 2605 – Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels.

C. American Society of Civil Engineers (ASCE):

1. ASCE 7 – Minimum Design Loads for Buildings and Other Structures.

D. ASTM International (ASTM):

1. ASTM A 653 – Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
2. ASTM B 209 – Specification for Aluminum and Aluminum Alloy Sheet and Plate.
3. ASTM C 645 – Specification for Nonstructural Steel Framing Members.
4. ASTM D 3359 – Standard Test Methods for Measuring Adhesion by Tape Tests.
5. ASTM E 84 – Test Methods for Surface Burning Characteristics of Building Materials.
6. ASTM E 329 – Standard Specification for Agencies Engaged in Construction Inspection and/or Testing.

E. National Fire Protection Association (NFPA):

1. NFPA 285 – Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Non-Load-Bearing Wall Assemblies Containing Combustible Components.

1.08 PERFORMANCE REQUIREMENTS

A. General: Provide composite wall panel system meeting performance requirements as determined by application of specified tests by a qualified testing agency on manufacturer's standard assemblies.

B. Structural Performance: Design composite wall panel system fabricated to withstand effects of indicated loads and stresses within limits and under conditions indicated below.

1. Wind Loading – +45 PSF/-49 PSF at non-salient areas, +45/-60 PSF at salient areas, unless greater design load is required by code.

2. Limits of Deflection: Composite wall panel system shall withstand scheduled wind pressure with the following allowable deflection:

a. Maximum allowable deflection limited to L/175 deflection of panel head and sill normal to plane of wall.

b. Maximum allowable deflection of panel stiffeners and aluminum panel material combined limited to L/60.

C. System Performance: A third party test report utilizing the standard ASTM E 283, E 331 and AAMA 501 procedures following the test protocol described in AAMA 508-07. Test panel must include a horizontal joint, with an imperfect air barrier.

D. Drained and Back Ventilated Rain Screen Performance: Per AAMA 509-09:

1. Water penetration through panel system: W1 classification.

2. Ventilation: V4 classification.

E. Thermal Movements: Allow for thermal movements from seasonal variations in both ambient and internal temperatures. Accommodate movement of support structure caused by thermal expansion and contraction without causing buckling, failure of joint seals, undue stress on fasteners or other detrimental effect including oil canning.

F. Fire Performance Characteristics: Provide metal composite wall systems with the following fire-test characteristics determined by indicated test standard as applied by UL or other testing and inspection agency acceptable to authorities having jurisdiction.

1. Surface-Burning Characteristics: Provide metal composite wall system panels with the following characteristics when tested per ASTM E 84.

a. Flame spread index: 25 or less.

b. Smoke developed index: 450 or less.

2. Intermediate Scale Multistory Fire Test: Representative mockup tested per NFPA 285 for a complete wall system providing air, water, vapor and thermal barriers.

1.09 PRE-INSTALLATION MEETING

A. Conduct pre-installation meeting to verify project requirements, substrate conditions and manufacturer's installation instructions.

B. Conduct observation and evaluation of the first 300 sf area installed with report by manufacturer's representative.

1.10 DELIVERY, STORAGE AND HANDLING

A. Deliver components, metal mechanical screens, and other manufactured items so as not to be damaged or deformed. Package panels for protection during transportation and handling. Store and handle in strict compliance with manufacturer's instructions and recommendations. Protect from damage from weather, excessive temperatures and construction operations.

B. Store and erect metal screen in a manner to prevent bending, warping, twisting, and surface damage. Do not store panels horizontally. Always store vertically with top of panel down.

C. Store covered with suitable weather tight and ventilated covering. Store panels to ensure dryness, with positive slope for drainage of water. Do not store panels in contact with other materials that might cause staining, denting, or other surface damage.

D. Remove strippable protective covering on metal plate wall panel prior to installation.

1.11 PROJECT CONDITIONS

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of metal plate wall panels to be performed according to manufacturer's written instructions and warranty requirements.

B. Field Measurements: Verify locations of structural members and wall opening dimensions by field measurements before metal plate wall panel fabrication and indicate measurements on Shop Drawings.

1.12 WARRANTY

A. Manufacturer's standard form in which manufacturer agrees to repair or replace components of preformed cladding assemblies that fail in materials or workmanship within specified two year warranty period.

1. Failures include, but are not limited to, the following:

a. Structural failures, including rupturing, cracking, or puncturing.

b. Deterioration of metals and other materials beyond normal weathering.

2. Installer's Warranty Period: Two years from date of Substantial Completion.

B. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish of preformed cladding materials that show evidence of deterioration of factory-applied finishes within specified warranty period.

1. Finish Warranty Period: (20) years from date of Substantial Completion.

PART 2 PRODUCTS

2.00 LEEDv4-S REQUIREMENTS

A. Products and materials used for this section of the work are required to meet the following criteria for LEEDv4-S materials Credits, and a completed LEEDv4 MATERIALS REPORTING FORM shall be submitted for all materials in this SECTION:

1. Recycled Content. (See Section 018113 Sustainable Design Requirements for overall project recycled content requirements.) Aluminum sheet shall be produced using an average minimum 50% recycled materials (25% post-consumer and 25% post industrial). Steel framing shall be produced using an average minimum 25% recycled content.
2. Regional Content. (See Section 018113 Sustainable Design Requirements for overall project regional content requirements.) The General Contractor shall examine each product or material specification below for a stated minimum regional content requirement, and if none is stated, the requirements under 018113 shall govern.
3. For all adhesives and sealants, meet the requirements for IEQ Credit 2, low-emitting materials, as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

2.01 ALUMINUM COMPOSITE MATERIAL (ACM) METAL PANEL SYSTEM

A. Standard of Quality and Design: To establish a standard of quality, function and design, drawings have been based upon style “Rainscreen II” by Alucobond Architectural. Similar ventilated dry seal rainscreen aluminum wall panel systems by Alpolic, Pac-Clad or other manufacturers will be considered as an equal upon submission of adequate supporting data.

B. Materials

1. Aluminum Sheet: Smooth surface coil-coated sheet, ASTM B209.
2. Aluminum Extrusions: ASTM B 221, 3105 Aluminum.

C. Composite Metal Panels: Factory-formed, aluminum-faced composite panels fabricated from two sheets of 0.020 inch (0.51 mm) thick aluminum facing sheets with metal facings bonded to thermoplastic core, and rout and return joinery.

1. Thickness: 6 mm nominal.
2. Panel Flatness: Maximum allowable distortion: 1/32 inch in 24 inches (0.794 mm in 600 mm) in any direction.
3. Panel Core: Thermo-set polymeric, fire-retardant.

4. Stiffeners: Manufacturer's standard stiffener required to meet performance requirements.

D. Face Sheet Surface: Smooth.

E. Face Sheet Coil Coated Finish:

1. As specified under 2.07, A.

F. Exposed Trim and Fastener Finish: Match panel finish.

G. Secondary Metal Framing

1. Miscellaneous Framing Components, General: Cold-formed metallic-coated steel sheet, ASTM C 645, Grade 50, with ASTM A 653/A 653M, G90 (Z180) hot-dip galvanized zinc coating.

a. Z-girts: 0.053 inch / 16 ga. (1.34 mm) minimum

b. Hat Channels: 0.053 inch/16 ga. (1.34 mm) minimum.

c. Sill Channels: 0.053 inch/16 ga. (1.34 mm) minimum.

d. Other Required Shapes: 0.053 inch/16 ga. (1.34 mm) minimum.

H. Accessories

1. Provide manufacturer's factory-formed clips, shims, flashings, sealants, and tapes for a complete installation.

2. Extruded Trim: Aluminum, minimum thickness 0.060 inch (1.59 mm) for trim and 0.90 inch (2.38 mm) for structural units.

3. Splines: Match panel material and finish.

4. Gaskets: Panel manufacturer's EPDM or neoprene, fire-retardant-treated.

5. Sealants: Type recommended by composite wall panel system manufacturer for application, meeting VOC limit requirements of SCAQMD, Rule 1168, effective July 1, 2005.

6. Flashing Tape: 4 inches (102 mm) wide self-adhering butyl flashing tape.

I. Fabrication

1. General: Fabricate composite wall panels and accessories at factory identical to tested units using manufacturer's standard procedures and processes necessary to meet performance requirements.

a. Provide components of composite wall panel system that are products of one manufacturer, including composite panels, gaskets, head and sill trim, bottom weep, base extrusion, and metal copings.

2. Composite Panels: Fabricate composite wall panels with extruded aluminum stiffeners requiring no further fabrication or modification in field.

a. Horizontal Joints: Dry seal, drained and back ventilated.

b. Vertical Joints: Pre-formed returns with [metal spline] [gasket] and aluminum extrusion receptors and extruded drain channels.

c. Reveals: 0.50 inch (12 mm).

d. Formed Panel Thickness: 2.50 inch (63.5 mm).

2.02 SINGLE SKIN METAL PANEL SYSTEMS

A. Standard of Quality and Design - To establish a standard of quality, function and design, drawings have been based upon style “Concept Series Concealed Fastener Panel” by Centria Architectural Systems. Similar vertical profile, concealed fastening wall panel systems by Fabral, Moran or other manufacturer will be considered as an equal upon submission of adequate supporting data.

B. Metal Wall Panel Materials

1. Aluminum Alloy: 3003-H14.

2. Thickness:

a. Thickness: 0.050 inches.

3. Panel Backside Coating: required

a. Coating Thickness: 60 microns

b. Abrasion Resistance, ASTM D 968, Method D: 140 liters

C. Concealed Fastener Metal Wall Panels

1. Wall panels shall be as follows:

a. Type A: Centria concealed fastener Concept Series horizontal clip, style CS-620, 7/8 in. thick x 12 inches wide having two 5-5/8 inch raised profiles.

b. Finish: As specified under 2.07, A.

D. Metal Wall Panel Accessories

1. Metal Wall Panel Accessories, General: Provide complete metal wall panel assembly incorporating trim, copings, fasciae, parapet caps, soffits, sills, inside and outside corners, and miscellaneous flashings. Provide manufacturer's factory-formed clips, shims, flashings, gaskets, lap tapes, closure strips, and caps for a complete installation. Fabricate and install accessories in accordance with SMACNA Manual.

2. Mitered Corners: Structurally-bonded horizontal interior and exterior trimless corners matching metal wall panel material, profile, and factory-applied finish, fabricated and finished by metal wall panel manufacturer.

3. Formed Flashing and Trim: Match material, thickness, and color of metal wall panel face sheets.

4. Sealants: Type recommended by metal wall panel manufacturer for application, meeting requirements of SECTION 070001-WATERPROOFING, DAMPPROOFING AND CAULKING.

5. Flashing Tape: 4-inch wide self-adhering butyl flashing tape.

6. Fasteners, General: Self-tapping screws, bolts, nuts, and other acceptable fasteners recommended by panel manufacturer. Material shall be 300 series stainless steel.

7. Concealed Clips: G90 Galvanized steel, 0.060 inch/16 ga. (1.52 mm) thick, designed to allow unimpeded thermal movement of panel and configured to hold panel minimum 3/4 inch (19.1 mm) from substrate.

E. Secondary Metal Sub-girt Framing

1. Miscellaneous Framing Components, General: Cold-formed metallic-coated steel sheet, ASTM A 653/A 653M, G90 (Z180).

a. Hat Channels: 0.053 inch/16 ga. (1.34 mm) minimum.

b. Sill Channels: 0.053 inch/16 ga. (1.34 mm) minimum.

2.03 MISCELLAEOUS TRIM, DOWNSPOUTS AND GUTTERS

A. Gauges of fascias, flashings, gutters and Miscellaneous Trim to be .050 inches thick unless otherwise shown on the Drawings. Fascias over 11 inches in width shall be .063 inch thick. Downspouts shall be 3 in. x 4 in. rectangular diameter, .050 thick with lapped and welded hemmed seams. Provide aluminum brackets and straps minimum 18 ga. at maximum 4 ft.-0 in. on center, provide brackets and fasteners straps appropriate to substrate: aluminum panel, masonry or structural steel.

B. Running trim shall be supplied in minimum 10 foot lengths unless otherwise shown on Drawings.

C. Finish: As specified under paragraph 2.07, A.

2.04 OVERFLOW SCUPPERS

A. Minimum gauge of scupper body to be .050 inches thick at prefinished aluminum formed with concealed fastening and welded.

B. Mounting fasteners to be stainless steel.

C. Line interior of scupper with compatible water proof membrane system.

D. Fabricate to the latest edition of SMACNA Standards.

E. Finish: As specified under paragraph 2.07, A.

2.05 SINGLE SKIN SOFFIT PANELS

A. Perforated soffit panels shall match the single skin panels in Article 2.02 for all requirements.

1. Type C Centria concealed fastener IW series “IW-14A”, 1-1/2 in. thick x 12 in. wide, having two 6 in. wide subdivisions.

2. Perforation size and spacing, if applicable, shall be as shown on the Drawings.

2.06 PREFINISHED ALUMINUM COLUMN COVERS (INTERIOR APPLICATION)

A. Round, flush joint, single skin column covers in sizes as shown on the Drawings shall be roll formed from .125-inch thick solid aluminum, 3003H-14 alloy for painted finish. To establish a level of quality and design and function specifications and drawings are based upon column covers as manufactured by PAC-CLAD. Similar covers by UNA-CLAD, SAF or approved equal will be considered by the Architect upon the submittal of adequate product data and samples.

1. The basis of design shall be PAC-CLAD 1000 F

2. Column covers shall be full length without horizontal joints. Refer to the drawings for column heights, shapes and sizes required.

3. Column covers shall be split and joined by a hairline keyslot system.

4. Provide caulk stops at top and bottom of column covers. Column shall be held off adjacent construction by ±1/8-inch at top and bottom.

5. Fasteners and attachment clips shall be non-corrosive and of type to eliminate electrolysis. All fasteners shall be concealed.

6. Seams shall be oriented as shown on the Drawings.

7. Finish shall be as specified under Article 2.07.

2.07 COLOR AND FINISH

A. Composite wall panels, fascias, soffits and related trim shall be finished as follows:

1. Finish: Fluoropolymer three-coat metallic system, consisting of 0.2 mil primer with a 0.80 mil PVCF fluoropolymer color coat containing metal flakes and a 0.50 mil PVDF fluoropolymer clear coat.

2. Color: One custom metallic color to match Fluropon Classic Pewter – Centria Sundance Metallic – Clearcoat: 430A307.

3. The Architect reserves the right to select the custom color match from the stated manufacturer's full line of metallic finishes.

B. Concealed fastener metal wall panels, metal wall louver units and related trim shall be finish as follows:

1. Fluoropolymer two-coat system consisting of 0.2 mil primer with 0.80 mil PVDF color coat.

2. Color: One Custom color to match Fluropon Classic Pewter – Centria Sundance Metallic – Clearcoat: 430A307.

C. Column cover finish as follows:

1. Fluoropolymer two coat system consisting of 0.2 mil primer with 0.80 mil PVDF color coat.

2. Color: One custom PPG color to match paint sample provided by the Architect.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal plate wall panel supports, and other conditions affecting performance of the Work.

1. Examine wall framing to verify that girts, angles, channels, studs, and other structural panel support members and anchorage have been installed within alignment tolerances required by metal plate wall panel manufacturer.
2. Verify that the air and vapor barrier has been installed over sheathing or backing substrate to prevent air infiltration or water penetration.

B. Examine roughing-in for components and systems penetrating metal plate wall panels to verify actual locations of penetrations relative to seam locations of panels before installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Miscellaneous Framing: Install sub-girts, base angles, sills, furring, and other miscellaneous metal plate wall panel support members and anchorage according to ASTM C 754 and panel manufacturer's written instructions.

B. Verify field dimensions before fabrication. Notify Architect of any discrepancies between field measurements and dimensions indicated in Construction Documents.

C. Place underlayment membrane and venting mat on substrate surfaces to receive metal panels; comply with manufacturer’s instructions.

1. Coordinate installation of underlayment with metal roofing, rain drainage work, flashing, trim and construction of parapets, walls, and other adjoining work to provide a weatherproof, secure and non-corrosive installation.
2. For underlayment end-laps and side-laps, see underlayment manufacturer’s instructions for proper attachment, seaming, and termination recommendations.

D. Conceal fasteners and expansion provision where possible in exposed work, and locate so as to minimize possibility of leakage. Cover and seal fasteners and anchors required for a tight installation.

E. Provide work as indicated on approved shop drawings

1. Form and fabricate sheets, seams, strips, cleats, edge treatments, integral flashings, and other components of metal wall cladding to profiles, patterns, and drainage arrangements shown and required for water shedding construction. Ensure that all shop & field fabricated bends have an acceptable “rounded” or radius bend. NO SHARP BREAKS.

F. Separate non-compatible materials with a rubberized asphalt underlayment.

3.03 INSTALLATION

A. Manufacturer’s Recommendations: Except as otherwise shown or specified, comply with Recommendations and instructions of manufacturer of sheet metal being fabricated and installed.

1. Do not install in inclement weather
2. Do not install over a damp substrate

B. Comply with SMACNA requirements unless otherwise indicated by the Contract Documents. In case of conflict, most stringent standards shall govern.

C. Install prefinished mechanical screens and associated items and sealant materials in accordance with the approved shop drawings and the manufacturer's written instructions.

1. Install panels plumb, level and straight with seams and ribs parallel, conforming to the design as indicated.
2. Install panels without waves, warps, buckles or distortions - and allow for expansion and contraction. Exercise care in handling panels and trim to prevent surface damage.
3. Caulk all flashings and panel joints that require caulking to prevent water penetration.
4. Ribbed pans shall be vertically broken under ridges and hooked at eves to insure weather-tightness.
5. Clip strips, cleats, and similar items shall be continuous along length of preformed cladding.
6. Fasteners shall be concealed. No exposed fasteners shall be accepted in the finished work. Do not use face nailing on exposed surfaces. Space fasteners per manufacturer's recommendations.
7. Hem exposed edges 1/2 inch.
8. Overlap seams at ends a minimum of 4 inches and fill with sealant. Lap seams to shed water.
9. Caulk all flashings and panel joints that require caulking to prevent water penetration.

10. Clip strips, cleats, and similar items shall be continuous along length of preformed cladding.

11. Hem exposed edges 1/2 inch.

12. Overlap seams at ends a minimum of 4 inches and fill with sealant. Lap seams to shed water.

13. Insulation shall be installed in strict accordance with manufacturer's recommendations. Joint tape and adhesive shall be compatible with the air and vapor barrier.

D. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." In case of conflict, the most stringent standards shall govern. Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that shall be permanently watertight and weather resistant.

E. Wall panels – Install composite and single skin aluminum panel systems in accordance with the approved shop drawings and the manufacturer's written instructions.

1. Surfaces to receive panels shall be even, smooth, sound, clean, dry and free from defects detrimental to work. Notify the General Contractor in writing of conditions detrimental to proper and timely completion of the work. Do not proceed with erection until unsatisfactory conditions have been corrected.

2. Surfaces to receive panels shall be structurally sound as determined by a registered Architect/Engineer.

3. Erect panels plumb, level and true.

4. Attachment system shall allow for the free and noiseless vertical and horizontal thermal movement due to expansion and contraction for a material temperature range of –20°F to +180°F. Buckling of panels, opening of joints, undue stress on fasteners, failure of sealants or any other detrimental effects due to thermal movement shall not be permitted. Fabrication, assembly and erection procedure shall account for the ambient temperature at the time of the respective operation.

5. Panels shall be erected in accordance with an approved set of shop drawings.

6. Anchor panels securely per engineering recommendations and in accordance with approved shop drawings to allow for necessary thermal movement and structural support.

7. Conform to panel fabricator's instructions for installation of concealed fasteners.

8. Do not install component parts that are observed to be defective, including: warped, bowed, dented, braised and broken members.

9. Do not cut, trim, weld or braze component parts during erection in a manner which would damage the finish, decrease strength, or result in a visual imperfection or failure in performance. Return component parts which require alteration to shop for re-fabrication, if possible, or for replacement with new parts.

10. Separate dissimilar metals and use gasketed fasteners where needed to eliminate the possibility of corrosive or electrolytic action between metals.

F. Protect factory finish from damage during installation. Field touch-up marred finish and field cuts to match factory finish.

3.04 ACCESSORY INSTALLATION

A. General: Install accessories with positive anchorage to building and weather tight mounting and provide for thermal expansion. Coordinate installation with flashings and other components.

1. Install components required for a complete metal plate wall panel assembly including trim, copings, corner and standard extrusion covers, flashings and similar items.

2. Install panels and trims so that they are weather-tight - without waves, warps, buckles or distortions - and allow for expansion and contraction. Exercise care in handling panels and trim to prevent surface damage.

3. Caulk all flashings and panel joints that require caulking to prevent water penetration.

4. Clip strips, cleats, and other similar items shall be continuous along length of preformed cladding.

5. Hem exposed edges 1/2 inch.

6. Overlap seams at ends a minimum of 4 inches and fill with sealant. Lap seams to shed water.

7. At exposed fastener type panels, fasteners shall match color of panel.

B. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." In case of conflict, the most stringent standards shall govern. Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that shall be permanently watertight and weather resistant.

3.05 ERECTION TOLERANCES

A. Installation Tolerances: Shim and align metal plate wall panel units within installed tolerance of 1/4 inch in 20 feet, non-cumulative, on level, plumb, and location lines as indicated.

3.06 CLEANING

A. On completion of metal plate wall panel installation, clean finished surfaces as recommended by panel manufacturer.

B. After metal panel installation, clear weep holes and drainage channels of obstructions, dirt.

C. Replace metal panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

SECTION 074233

PHENOLIC RAINSCREEN SYSTEM

PART 1 GENERAL

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish and install the following as shown on the Drawings and specified herein:

1. Complete exterior phenolic rainscreen cladding system from the AVB outward, including:
    a. Wall and soffit panels, exposed fastening system, J & hat channel aluminum sub-framing and all required fasteners.
    b. Galvanized Z-girt system including z-shaped sub-girts, trim pieces, fasteners, furring, internal sealants and all required fasteners.
    c. Fabric backer cloth at joints (horizontal and vertical) on vertical wall panel installations.
2. Interior phenolic slat panels and concealed clip fixing system.

B. Install the following items as furnished under the designated SECTIONS:

1. Semi-rigid cavity wall insulation between Z girts, behind exterior phenolic wall panels: SECTION 072100-INSULATION.
2. Preformed and prefinished sill flashing and base wall flashing: SECTION 074213-PREFORMED CLADDING.

C. LEEDv-4 S Requirements:

1. The work of this Section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEED -S Certification at “Silver” Level is an Owner requirement that is critical to secure project funding from the Massachusetts School Building Authority. LEEDv4-S requirements for the work of this Section are detailed herein and additionally in DIVISION 1 of this Project Manual.

2. Meet the LEEDv4-S requirements for MR Credit 2, Building Product Disclosure and Optimization – Environmental Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers' product documentation for each product having an Environmental Product Declaration (EPD).

D. Exterior Envelope Commissioning – Refer to SECTION 019113-BUILDING COMMISSIONING REQUIREMENTS.

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be performed under the designated SECTIONS:

1. Construction of mock-up: SECTION 014339-EXTERIOR MOCK-UPS.
2. Structural steel framing: SECTION 051200-STRUCTURAL STEEL FRAMING.
3. Metal stud framing and exterior sheathing to receive continuous air and vapor barrier, insulation and cladding: SECTION 092116-GYPSUM WALLBOARD.
4. Continuous air and vapor barrier: SECTION 071326-AIR AND VAPOR BARRIER.
5. Installation of exterior insulation behind masonry veneer, preformed metal cladding and cementitious panels, respectively: SECTION 040001-MASONRY, SECTION 074213-PREFORMED CLADDING and SECTION 074247-FIBER REINFORCED CEMENTITIOUS PANEL RAINSCREEN SYSTEM.
6. Precast concrete base and stainless steel drip edge and thru wall flashing below phenolic panels: SECTION 040001-MASONRY
7. Prefinished aluminum panels, soffits, flashing, fascias, sills, coping and trim: SECTION 074213-PREFORMED CLADDING.
8. Membrane roofing systems and related fascias and flashings: SECTION 070002-ROOFING AND FLASHING.
9. Aluminum window, curtainwall, storefront and trim: SECTION 080001-METAL WINDOWS.
10. Intercom, fire alarm, door operator actuators and other electric devices mounted in phenolic slat panels: SECTION 260001-ELECTRICAL and DIVISIONS 27 and 28.
11. Plywood substrate at interior panels: SECTION 061000-ROUGH CARPENTRY.
12. Painting of substrate behind interior phenolic panels: SECTION 090007-PAINTING.

1.04 SUBMITTALS

A. Submit the following in accordance with the provisions of SECTION 013300-SUBMITTALS.

B. Product Data: Submit manufacturer's product data, including slat panels, sub framing & Z girt systems , fasteners and accessories. Include full range of available finishes for phenolic panels and visible accessories.

C. Samples as follows:

1. Minimum 3 in. x 6 in. samples of up to 5 colors/finishes for panels as chosen by the Architect from product data.
2. When color/finish is confirmed, submit three nominal 6 in wide x 12 in. long samples chosen color/finish in specified thickness with holes drilled for fasteners at proposed location in one exemplar for final approval.
3. Exposed fasteners: Two each of color matched and matte stainless steel screws for selection by the Architect.
4. Phenolic Rainscreen System Sample Panel: Before construction of the exterior mock-up panel structure, submit sample panel of the proposed phenolic rainscreen system. System sample panel shall be in the approved color with approved fasteners. System sample panel shall be not less than 18 x 18 inches. System sample panels shall be constructed as a cut-away, indicating all elements of construction and installation required for the panel system. Revisions, if required, shall be incorporated into the mock-up panel structure. Panels may be constructed by the manufacturer or installation contractor.

D. Shop Drawings: Show panel layout, fastener spacing, flashing locations, sub-framing spacing and member type, corner and transition details. Show Z girt system including gauges & spacing and special conditions. Shop drawings shall include:

1. Panel elevations, sections, and dimensions.
2. Panel thickness and fastener type and size. Note all locations of exposed fasteners.
3. Joint and connection details.
4. Erection details.
5. Panel cut-outs for Mechanical, Electrical, Plumbing, and Security devices and items.
6. Locations and details of z girt system including attachment to structure.
7. Erection sequence for special conditions.
8. Relationships to adjacent materials.
9. Shop Drawings for Mockups shall include elevations, sections, full-size details, and adjacent other work.

E. Provide design calculations for panels, fasteners, channel subframe and z-girt system. Calculations and shop drawings shall be stamped by an engineer registered in the Commonwealth of Massachusetts.

F. Manufacturer's Certification: Submit manufacturer's certification that materials comply with specified requirements and are suitable for intended application.

1.05 QUALITY ASSURANCE

A. Phenolic panel products shall be stamped with manufacturer's name, address, product name, thickness, color, batch number and fire resistance evaluation report number (ESR-3462 or equal).

B. Exterior product MUST be installed in accordance to NFPA 285 requirements as shown by manufacturer's approved tested assembly.

C. Fabricator / Installer Qualifications

1. Installer shall be experienced in performing work with phenolic panels of similar type and scope. Supervisors and installers shall have a minimum 3 years of experience of projects of similar type or otherwise be certified by the manufacturer.

D. All exterior and interior phenolic panels must be sourced from the same manufacturer.

1.06 MOCK-UP PANEL STRUCTURE

A. Provide and install phenolic rainscreen system at the Exterior Mockup structure as shown on the Drawings. Mock-up structure shall include slats, insulation, trim, all sub-framing, Z-girts and transitions to adjacent materials as shown on the mock-up drawings. Mock-up shall use the final approved materials, colors and construction indicated on approved shop drawings. Deficiencies shall be corrected on the Mock-up prior to the start of work on the building at no additional cost to the owner. The mock-up structure shall be left on site to serve as the reference standard for appearance and workmanship as the work progresses.

B. Refer to the Drawings and SECTION 014339-EXTERIOR MOCK-UPS for sizes, configuration and other requirements for the mock-up panel structure.

C. Approval of mock-ups does not constitute approval of deviations from the Contract Documents contained in mock-ups unless Architect specifically approves such deviations in writing.

D. Mock-up panel structure will not remain as part of the Work.

1.07 PRE-INSTALLATION MEETING

A. Conduct pre-installation meeting to verify project requirements, substrate conditions and manufacturer's installation instructions.

B. Conduct observation and evaluation of the first 300 sf area installed with report by manufacturer's representative.

1.08 PERFORMANCE REQUIREMENTS

A. General Performance: Comply with performance requirements specified, as determined by testing of manufacturers' products representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.

B. Failure also includes the following:

1. Thermal stresses transferring to building structure.
2. Solid exterior wall panels and support structure cracking or breakage.
3. Noise or vibration created by wind and thermal and structural movements.
4. Loosening or weakening of fasteners, attachments, and other components.

C. Structural Performance: Provide solid exterior wall panel and support system as follows:

1. Wind Loading: +45 PSF/-49 PSF at non-salient areas, +45/-60 PSF at salient areas, unless greater design load is required by code.
2. Deflection within specified limits.
3. Thermal Movement: Provide for thermal movement resulting from annual ambient temperature change of 120 degrees F
4. At 150 percent of positive and negative wind-load design pressures, assemblies, including anchorage, will not evidence material failures, structural distress, and permanent deformation of main framing members exceeding 0.2 percent of span.
5. Durations: As required by design wind velocity, but not less than 10 seconds.
6. Design Panel anchorage and supporting frame to accommodate sub-frame and building deflection.
7. Deflection of Framing Members: At design wind pressure, as follows:
    a. Deflection Normal to Wall Plane: Limited to edge of panel in a direction perpendicular to panel plane not exceeding L/240 of the panel edge length for each panel or an amount that restricts edge deflection of individual panels to manufacturer's product limitations, whichever is less.
    b. Deflection Parallel to Panel Plane: Limited to L/360 of clear span or 1/8 inch, manufacturer's product limitations, whichever is smaller.
    c. Cantilever Deflection: Where framing members overhang an anchor point, limit deflection to 2 times the length of cantilevered member divided by 175, or manufacturer's product limitations, whichever is smaller.

D. Story Drift: Accommodate design displacement of adjacent stories.

E. Design Displacement: As indicated on Structural Drawings.

F. Maximum Solid Exterior Wall Panels Deflection: 1/360 of span or less when tested in accordance with positive and negative pressures.

G. Solid exterior wall panel system shall comply with 2015 International Building Code 1405.16.1 Panel Siding.

H. Anchorage system: Wall anchorages for exterior systems shall be designed to prevent thermal transfer through fasteners to interior side of cold-formed metal framing which could result in condensation inside the stud cavity.

I. Fire Performance Characteristics: Provide phenolic panel wall systems with the following fire-test characteristics determined by indicated test standard as applied by UL or other testing and inspection agency acceptable to authorities having jurisdiction.

1. Interior and Exterior Panels Surface-Burning Characteristics: Provide phenolic panel wall system with the following characteristics when tested per ASTM E 84 to conform to minimum Class B.

a. Flame spread index: 25 or less.

b. Smoke developed index: 450 or less.

2. Exterior Panel System Intermediate Scale Multistory Fire Test: Representative mock-up tested per NFPA 285 for a complete wall system providing air, water, vapor and thermal barriers.

1.09 WARRANTY

A. Provide manufacturer's standard 10-year warranty covering structural stability, color and finish retention.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Transportation:

1. Transport panels horizontally and strapped down to avoid sliding across one another.

2. Protect edges and corners.

3. Maintain in original protective packaging until use.

B. Storage:

1. Store panels horizontally with supports no more than 31-1/2 (80 mm) inches apart.

2. Store panels in clean dry location protected from rain and sun within manufacturer's recommended temperature and humidity range.

C. Handling:

1. Wear protective gloves when handling.

PART 2 PRODUCTS

2.00 LEEDv4-S REQUIREMENTS

A. Products and materials used for this Section of the Work are required to meet the following criteria for LEEDv4-S materials Credits, and a completed LEEDv4 MATERIALS REPORTING FORM shall be submitted for all materials in this SECTION.

2.01 PHENOLIC PANEL RAINSCREEN

A. To establish a standard of quality, design and function, manufacture has been based upon “Façade F” by Parklex, USA, Woodstock, GA (Navarra, Spain).

B. Similar exterior phenolic slat rainscreen systems: “ProdEx IGN” by Prodema Exterior, Guipuzcoa, Spain; “Max-Exterior F” by Fundermax-US, Charlotte, NC or others will be considered for approval by the Architect upon receipt of adequate supporting data and samples.

2.02 EXTERIOR PANELS

A. Panels shall be Parklex “Façade F” or equal high pressure compact laminate, composed of natural wood veneer or high grade digital image and paper fibers treated with thermosetting resins, designed for flush assembly.

1. Size: Slats nominal 96 in. wide (95 ¾ in. panel face and ¼ in. joint) by nominal 6 in. high. (5 ¾ in. panel face and ¼ in. joint).
2. Thickness: 10 mm (3/8 in.)
3. Edges: Square edge.
4. Color: Parklex: “Copper”; Prodema: “Rustik”; Fundermax: “Creek Iconic”. The Architect reserves the right to choose from manufacturer’s full line of wood patterns and colors.

B. Panels Properties: EN438-7, and ICC ESR-3462:

1. Dimensional Stability: 0.3 percent cumulative dimensional change
2. Maximum Height of Impact with No Visible Signs of Cracking: ≥ 1,800 mm
3. Tensile Strength (Long Grain): ≥ 60 MPa
4. Flexural Strength:
   a. Long Grain: ≥ 80 MPa
   b. Cross Grain: ≥ 80 MPa
5. Thermal Resistance:
   a. Façade S: 0.266 k
   b. Façade F: 0.220 k
6. UV Resistance:

a. Contrast, Gray Scale Rating: ≥ 3

b. Aspect Rating: ≥ 4

7. Artificial Weathering Resistance:

a. Contrast, Gray Scale Rating: ≥ 3

b. Appearance Rating: ≥ 4

8. Water Vapor Permeability:

a. Wet Cup Method: 100µ

b. Dry Cup Method: 250µ

9. Density: ≥ 1.35 g/cm3

10. Water Absorption:

a. Façade S: ≤ 5 percent

b. Façade F: ≤ 8 percent

11. Fire Resistance ≥ 6 mm thickness:

a. Façade S: C-s2, d0

b. Façade F: B-s2, d0; ICC-ESR, ASTM E84: Class A, NFPA 285 (Exposed fastener system)

2.03 SUPPORT STRUCTURE (EXTERIOR)

A. Two-part support structure consisting of:

1. Aluminum sub-frame channels supporting the phenolic panels.

2. Galvanized steel z-girts attached to the building structure and supporting the aluminum sub-frame channels.

B. Aluminum sub-frame consists of vertical hat & J channels. Channels attach to z-girts. Aluminum channels spaced at maximum 24 in. o.c. Aluminum shall be painted black. Sub-frame channels at soffits shall run perpendicular to the phenolic panels.

1. Sub-Framing Assembly Materials:

a. Made from 6000 series architectural grade aluminum

b. Finish: Black painted.

2. Aluminum sub-frame channels attachment to z-girts: 304 series stainless steel fasteners size and spacing as required to meet specified performance requirements. Fasteners shall be painted black where visible through vertical panel joints.

C. Z-girt System: Horizontal z-girts fastened through the air and vapor barrier and exterior sheathing to the LGMF structure. Z-girts typically 4 in. deep, 3 in. deep where attached directly to underside of metal deck as noted on the Drawings. Z-girts spaced at maximum 24 in. o.c., minimum 16 ga.

1. Z-Girts and Miscellaneous Framing Components: Cold-formed metallic-coated steel sheet, ASTM C 645, Grade 50, with ASTM A 653/A 653M, G90 (Z180) hot-dip galvanized zinc coating.

    a. Z-girts: 0.053 inch / 16 ga. (1.34 mm) minimum

    b. Hat Channels: 0.053 inch/16 ga. (1.34 mm) minimum.

    c. Sill Channels: 0.053 inch/16 ga. (1.34 mm) minimum.

    d. Other Required Shapes: 0.053 inch/16 ga. (1.34 mm) minimum.

2.04 AUXILIARY MATERIALS

A. Panel Attachment: Exposed fasteners to attach phenolic panels to hat and "L" channels.

1. Manufacturer's stainless steel exposed screw fasteners. Provide two fasteners at each slat at each vertical channel.

2. Exposed fasteners at face of panels shall be coated to match panel color or natural matte stainless steel as chosen by the Architect.

3. Panel fastener holes to be factory drilled by panel manufacturer.

B. Stainless Steel Drill Screws: Of sufficient lengths and sizes to securely fasten support structure to building wall framing members, as follows:

1. Screws complying with ASTM C 1002 for fastening to steel members less than 0.033 inches (0.84 mm) thick.

2. Screws complying with ASTM C 954 for fastening to steel members from 0.033 to 0.112 inches (0.84 to 2.84 mm) thick.

C. Black felt breathable membrane to be applied to semi-rigid insulation at open joints on vertical wall surfaces at exterior phenolic panels: VaproShield RevealShield SA or equal compatible with insulation. Membrane function is solely visual. Membrane shall be installed at all locations where insulation is visible through joints, including:

1. From exterior; all locations from grade to 8 ft.-0 in. above grade.

2. From interior; as viewed through glazing; from viewing plane to 8 ft.0 in. above viewing plane. The viewing plane is defined as ground, first and second floor levels and intermediate stair landing levels, and at other locations as shown on the Drawings.

D. Vent Screen: As shown on the Drawings at the bottom and top of the elevation to close off the cavity: minimum 26 ga. brake metal aluminum, perforated with maximum ¼ in. openings and minimum 75% openness.

2.05 INTERIOR PANELS

A. Panels: Panels shall, in all material parameters, match "Façade F" specified in Article 2.02. Veneer color and grain to match exterior panels. Interior and exterior panel veneer shall be fabricated from the same or similar lots.

B. Concealed fixing clip system and all required fasteners to mount directly to painted plywood substrate.

1. Slim z-clips, “Monarch MF250” or equal with required fasteners to mount directly to painted plywood substrate.

2. Clip system shall secure interior panels rigidly in place to ensure alignment if contact is made with panels.

2.06 FABRICATION

A. Fabricate wall panels and accessory items in accordance with manufacturers’ recommendations and approved submittals.

B. Panels shall be fabricated to size, factory-edges shall be factory routed and slats shall by factory drilled as required by the phenolic panel manufacturer.

C. Field-cut panels and drill face-fastening anchor holes in accordance with the phenolic panel manufacturer’s written directions.

D. Fabricate all panels to profiles, colors and textures per samples and approved shop drawings.

E. Fabricate panels in accordance with manufacturers’ Quality Management System Tolerances and Acceptance Criteria.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrate and framing members for alignment

B. Notify Architect of conditions that would adversely affect installation.

C. Do not begin surface preparation or installation until unacceptable conditions are corrected.

D. Exterior Applications: Ensure that weather barriers (AVB) are properly installed, complete and undamaged.

E. Interior Applications: Ensure that plywood substrate is properly installed and painted.

3.02 PREPARATION

A. Securely install wall Z-girt system plumb and square, and correctly spaced to accommodate insulation, aluminum channels and phenolic panels.

3.03 INSTALLATION GENERAL

A. Install panels in strict compliance with manufacturer's written instructions.

B. Use recommended cutting tools, equipment, and procedures.

C. Provide a minimum of 1/4 inch (6 mm) expansion at panel edges.

1. Do not seal joints.
2. Provide ¾" joint at the bottom and top of exterior applications as detailed in the Drawings.

D. Follow shop drawings for sub-framing support, and fastener location and spacing.

E. Provide a minimum 3/4 inch (19 mm) clear air gap behind panel. Install vent strips at top and bottom of wall as detailed

3.05 INSTALLATION INTERIOR SYSTEM

A. Install z-clips directly to painted plywood substrate as at minimum 2'-0" O.C. horizontally at every slat. Provide two z-clips at ends, placed at top and bottom of phenolic planks to secure all corners. Offset as required. Arrange such that no part of the z-clips shall be visible when the panel is in place.

B. Plywood substrate to be painted (under SECTION 090007-PAINTING) flat black prior to installation of interior panels. Do not commence work until painted. Touch up substrate finish damaged in the course of panel installation.

3.06 CLEANING

A. Clean stains and excess adhesive from panels following manufacturer's instructions.

1. Do NOT use abrasive cleaning cloths or sponges, or harsh solvents such as acetone, ethyl acetate or MEK (Methyl Ethyl Keytone) on any surface to clean panels.

END OF SECTION

SECTION 074247

FIBER REINFORCED CEMENTITIOUS PANEL
RAINSCREEN SYSTEM

PART 1 GENERAL

1.01 GENERAL REQUIREMENTS

A. Part A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish and install the following as shown on the Drawings and specified herein:

1. Complete reinforced cementitious rainscreen cladding system from the AVB outward, including:

a. Fiber reinforced cementitious direct fastened wall and soffit panels, rivets fasteners, aluminum sub-framing and all required fasteners.

b. Galvanized z-girt system including z-shaped sub-girts, trim pieces, fasteners, furring, internal sealants and all required fasteners.

c. Fabric backer cloth behind joints (horizontal and vertical) at vertical wall panel installations to 8 ft. above grade.

B. Install the following items as furnished under the designated SECTIONS:

1. Rigid cavity wall insulation behind fiber cement rainscreen panels: SECTION 072100-INSULATION.

2. Semi-rigid insulation at fiber cement soffit panels: SECTION 072100-INSULATION.

3. Preformed and prefinished sill flashing and base wall flashing: SECTION 074213-PREFORMED CLADDING.

C. LEEDv4-S Requirements:

1. The work of this Section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEED-S Certification at “Silver” Level is an Owner requirement that is critical to secure project funding from the Massachusetts School Building Authority. LEEDv4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.

2. Meet the LEEDv4-S requirements for MR Credit 2, Building Product Disclosure and Optimization – Environmental Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturer's product documentation for each product having an Environmental Product Declaration (EPD).

D. Exterior Envelope Commissioning – Refer to SECTION 019113-BUILDING COMMISSIONING REQUIREMENTS.

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be performed under the designated SECTIONS:

1. Construction of mock-up: SECTION 014339-EXTERIOR MOCK-UPS.
2. Structural steel framing: SECTION 051200-STRUCTURAL STEEL FRAMING.
3. Metal stud framing and exterior sheathing to receive AVB, rigid insulation and various cladding: SECTION 092116-GYPSUM WALLBOARD.
4. Continuous air and vapor barrier: SECTION 071326-AIR AND VAPOR BARRIER.
5. Installation of exterior rigid insulation behind masonry veneer and preformed metal cladding: SECTION 040001-MASONRY and SECTION 074213-PREFORMED CLADDING.
6. Installation of semi-rigid insulation behind phenolic panel: SECTION 074233-PHENOLIC RAINSCREEN SYSTEM.
7. Prefinished aluminum panels, soffits, flashing, fascias, sills, coping and trim: SECTION 074213-PREFORMED CLADDING.
8. Membrane roofing systems and related flashings: SECTION 070002-ROOFING AND FLASHING.
9. Aluminum window, curtainwall, storefront systems and trim: SECTION 080001-METAL WINDOWS.

1.04 RELATED DOCUMENTS & REFERENCES

A. ASTM: American Society for Testing and Materials.

1. ASTM A653/A653M; Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
2. ASTM A792; Standard Specification for Steel Sheet, 55 percent Aluminum-Zinc Alloy-Coated by the Hot-Dip Process
3. ASTM C120; Standard Test Methods of Flexure Testing of Slate (Breaking Load, Modulus of Rupture, Modulus of Elasticity.

4. ASTM C1185; Standard Test Methods for Sampling and Testing Non Asbestos Fiber Cement Flat Sheet, Roofing and Siding Shingles, and Clapboards.

5. ASTM C1186; Standard Practices for Air Leakage Site Detection in Building Envelopes and Air Barrier Systems.

6. ASTM E84; Standard Test Method for Surface Burning Characteristics of Building Materials.

7. ASTM E228; Standard Test Method for Linear Thermal Expansion of Solid Materials with a Push Rod Dilatometer.

8. ASTM E330 Standard Test Method for Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference.

9. ASTM G155; Standard Practice for Operating Xenon Arc Light Apparatus for Exposure of Non-Metallic Materials.

B. National Fire Protection Agency (NFPA)

1. NFPA 285: Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Non-Load-Bearing Wall Assemblies Containing Combustible Components.

1.05 SUBMITTALS

A. Submit the following in accordance with the provisions of SECTION 013300-SUBMITTALS.

B. Product Data:

1. Technical Summary

2. Color Specifications Guidelines

3. Color Variation Data

4. Sealer Data Sheet

5. Hardware Technical Data

6. Anchor Product Data Sheet

7. Anchors and/or fasteners test reports

8. Attachment Components Product Data

9. Attachment Components Installation instructions

C. Shop Drawings: Show fabrication and installation details for fiber reinforced cementitious panels including the following:

1. Panel elevations, sections, and dimensions.

2. Panel thickness and fastener type and size.

3. Finishes.

4. Joint and connection details.

5. Erection details.

6. Panel cut-outs for Mechanical, Electrical, Plumbing, and Security devices and items.

7. Panel frame details for typical panels including sizes, spacings, thicknesses, and yield strengths of various members.

8. Locations and details of connection hardware attached to structure.

9. Sizes, locations, and details of flex, gravity, and seismic anchors for typical panels.

10. Erection sequence for special conditions.

11. Relationship to adjacent materials.

12. Shop Drawings for Mockups: Include plans, elevations, sections, full-size details, and attachments to other work.

D. Samples: Representative of finished exposed face of fiber reinforced cementitious panel, as follows:

1. For each color and pattern specified / selected, submit a minimum of two samples, each not less than 6 by 6 inches and of actual thickness. One of each color shall be pre-drilled for fasteners at the proposed locations.

2. Three color matched rivets.

3. Fiber Reinforced Cementitious Panel Rainscreen System Sample Panel: Before construction of the exterior mock-up panel structure, submit sample panel of the proposed FRC rainscreen system. System sample panel shall be in the approved color and fasteners. System sample panel shall be not less than 18 x 18 inches. System sample panels shall be constructed as a cut-away, indicating all elements of construction and installation required for the panel system. Revisions, if required, shall be incorporated into the mock-up panel structure.

E. Provide design calculations for panels, panel anchors and sub-frame – Calculations and shop drawings to be stamped by an engineer registered in the Commonwealth of Massachusetts.

F. LEED for Schools Submittals (Refer to SECTION 013300-SUBMITTALS):

1. Relevant supporting documentation required by LEED for Schools v4 as detailed in Section 018113-Sustainable Design Requirements.

2. A completed LEED MATERIALS REPORTING FORM, per Section 018113-Sustainable Design Requirements.

G. Quality Assurance Submittals:

1. Test Reports: Submit certified test reports showing compliance with specified performance characteristics and physical properties.
2. Independent QMS Certification and Listing Document
3. Qualification Certificates: Submit certificate indicating installer has experience in performing work with thin fiber reinforced cementitious panels of similar type and scope. Supervisors and installers shall have a minimum five-years of experience of projects of similar type.
4. Product certificates signed by manufacturers certifying materials comply with specified performance characteristics and criteria and physical requirements.
5. Manufacturer's Quality Documentation:
    a. Quality Management – Tolerances + Acceptance Criteria
    b. Certified Test Results
    c. Aggregate Acceptance Guidelines
    d. Uncrating, Storage, + Handling
    e. Field Cutting Instructions-Wet
    f. Field Drilling Instructions-Wet

H. Closeout Submittals:

1. Operation and Maintenance Data:
    a. Operation and maintenance data for installed products in accordance with Division 1 Closeout Submittals (Maintenance Data and Operation Data) Section.
    b. Include methods for maintaining installed products and precautions against cleaning materials and methods detrimental to finishes and performance.

1.06 MOCK-UP PANEL STRUCTURE

A. Provide and install fiber reinforced cementitious panel rainscreen system as shown on the Drawings. Mock-up structure shall include panels. insulation, trim, all sub-framing and transition to adjacent materials as shown on the mock-up drawings and shall show the three colors / textures of panels in their proposed proportions. The final mock-up structure shall be left on site to serve as the reference standard for appearance and workmanship as the work progresses. This subcontractor shall, at no additional cost to the Owner, rebuild the portions of the mock-up furnished and installed under this SECTION using the final approved materials, colors and construction to complete the final mock-up.

B. Refer to SECTION 014339-EXTERIOR MOCK-UPS for sizes, configuration and other requirements for the mock-up panel structure.

C. Approval of mock-ups does not constitute approval of deviations from the Contract Documents contained in mock-ups unless Architect specifically approves such deviations in writing.

D. Mock-up panel structure will not remain as part of the Work.

1.07 PERFORMANCE REQUIREMENTS

A. General Performance: Comply with performance requirements specified, as determined by testing of manufacturers' products representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.

B. Failure also includes the following:

1. Thermal stresses transferring to building structure.
2. Solid exterior wall panels and support structure cracking or breakage.
3. Noise or vibration created by wind and thermal and structural movements.
4. Loosening or weakening of fasteners, attachments, and other components.

C. Structural Performance: Provide solid exterior wall panel and support system as follows:

1. Wind Loading: +45 PSF/-49 PSF at non-salient areas, +45/-60 PSF at salient areas, unless greater design load is required by code.
2. Will not evidence deflection exceeding specified limits.
3. Thermal Movement: Provide for thermal movement resulting from annual ambient temperature change of 120 degrees F
4. At 150 percent of positive and negative wind-load design pressures, assemblies, including anchorage, will not evidence material failures, structural distress, and permanent deformation of main framing members exceeding 0.2 percent of span.
5. Durations: As required by design wind velocity, but not less than 10 seconds.
6. Design Panel anchorage and supporting frame to accommodate sub-frame and building deflection.

7. Deflection of Framing Members: At design wind pressure, as follows:

   a. Deflection Normal to Wall Plane: Limited to edge of panel in a direction perpendicular to panel plane not exceeding L/240 of the panel edge length for each panel or an amount that restricts edge deflection of individual panels to manufacturer's product limitations, whichever is less.

   b. Deflection Parallel to Panel Plane: Limited to L/360 of clear span or 1/8 inch, manufacturer's product limitations, whichever is smaller.

   c. Cantilever Deflection: Where framing members overhang an anchor point, limit deflection to 2 times the length of cantilevered member divided by 175, or manufacturer's product limitations, whichever is smaller.

D. Story Drift: Accommodate design displacement of adjacent stories.

E. Design Displacement: As indicated on Structural Drawings.

F. Maximum Solid Exterior Wall Panels Deflection: 1/360 of span or less when tested in accordance with positive and negative pressures.

G. Solid exterior wall panel system shall comply with 2015 International Building Code 1405.16.1 Panel Siding.

H. Anchorage system: Wall anchorages for exterior systems shall be designed to prevent thermal transfer through fasteners to interior side of cold-formed metal framing which could result in condensation inside the stud cavity.

I. Fire Performance Characteristics: Provide fiber reinforced cementitious panel wall systems with the following fire-test characteristics determined by indicated test standard as applied by UL or other testing and inspection agency acceptable to authorities having jurisdiction.

   1. Surface-Burning Characteristics: Provide fiber reinforce cementitious panel wall system with the following characteristics when tested per ASTM E 84.

      a. Flame spread index: 25 or less.

      b. Smoke developed index: 450 or less.

   2. Intermediate Scale Multistory Fire Test: Representative mock-up tested per NFPA 285 for a complete wall system providing air, water, vapor and thermal barriers.

1.08 PRE-INSTALLATION MEETING

A. Conduct pre-installation meeting to verify project requirements, substrate conditions, and manufacturers' installation instructions.

B. Conduct observation and evaluation of the first 300 sf area installed with report by manufacturer's representative.

1.09 DELIVERY, STORAGE AND HANDLING

A. Deliver panels and support system components packaged to comply with manufacturers' requirements and adequately protected from damage during shipment.

B. Protect components from adverse job conditions prior to installation.

C. Protect components from damage after installation including, but not limited to, staining or solvents used in adjacent work, impact damage and abrasion.

D. Panels are to be stored and handled per manufacturer's recommendations until installed.

E. Store exterior solid wall panels and support system components on platforms or pallets, covered with tarpaulins so that water accumulations will drain freely.

F. Store with non-staining resilient spacers between panels. with suitable ventilation. Store components

G. Do not store cementitious panels and support system components in contact with other materials that might cause staining, denting, surface damage or other deleterious effects.

1.10 PROJECT CONDITIONS

A. Field Measurements: Verify locations of structural members and wall opening dimension by field measurements before concrete panel fabrication and indicate measurements on Shop Drawings.

1. Established Dimensions: Where field measurements cannot be made with delaying the Work, either establish framing and opening dimensions and process with fabricating concrete panels without field measurements or allow for field trimming of panels. Coordinate wall construction to ensure that actual building dimensions, locations of structural members, and opening correspond to established dimensions.

2. Field trimming is required for all penetrations through panels.

PART 2 PRODUCTS

2.01 SOLID EXTERIOR FIBER REINFORCED CEMENTITIOUS WALL PANELS

A. To establish a standard of quality, design and function, manufacture has been based upon Swisspearl “Largo”, Niederurnen, Switzerland.

B. Similar exterior fiber reinforced cementitious wall panel systems by Equitone, Maryville, TN or others will be considered for approval by the Architect upon receipt of adequate supporting data and samples.

C. MATERIALS

1. Panels made from
    a. Portland cement, ground limestone, additives
    b. Polyvinyl alcohol fibers and cellulose fibers
    c. Acrylic coating to panel face, rear side and edges
2. The following characteristics are not acceptable
    a. Autoclaved products
    b. Reinforcement with only cellulose fibers
    c. Efflorescence
3. Fiber reinforced cementitious panels air cured for minimum of 4 weeks.
4. Fastening system: Exposed

D. Panel Finishes:

1. Finish exposed, front-facing surface, to match approved design reference sample. Panel faces shall be free of joint marks, grain, or other obvious defects.
2. Pattern/Texture: Three colors / textures as shall be chosen by the Architect from the manufacturer’s line. For the Basis of Design, the three are as follows:
    a. Avera Crystal AV010
    b. Carat Crystal 7010
    c. Vintago V1011
3. to be selected by the Architect from full manufacturer’s line.
    a. Pattern Direction: Horizontal

E. Panel Sizes: As indicated on Drawings – nominal 6 inches (5 3/4-inch panel and 1/4 inch joint) wide panels / planks in up to 8 ft. nominal (7 ft.-11 ¾ in.) lengths.

F. Panel Layout: Running bond

G. Panel Dimensional Tolerances

H. Panel Thickness*: 12 mm (5/8-inch nominally), thickness variation +/- 0.05-inch*

I. Panel Edges: ***¼ in.****Open joint at all corners*

J. Panel Weight: *4.5 lbs./ ft², at 5/8-inch thickness*

K. Density: 1.8 g/cm^3 (0.065 lbs./in.^{3}) according to ASTM-C 1186.

2.02 SUPPORT STRUCTURE

A. Two-part support structure consisting of:

1. Aluminum frame assembly supporting and anchoring the cementitious panels.
2. Galvanized steel z-girt sub frame attached to the building structure and supporting the aluminum frame assembly.

B. Aluminum frame consists continuous vertical “L” and T”T profile furring strips, connecting to vertical “L” brackets. “L” brackets at minimum 24 inches o.c. vertically attached to horizontal z-girts. Aluminum frames spaced at maximum 24 inches o.c. Aluminum frame shall be painted black.

1. Aluminum Extrusions: ASTM C 221, Alloy 6005 T5.
2. Aluminum Sheet: ASTM B 209, Alloy 6061-T5.

C. Z-Girt System: 3 in. horizontal z-girts fastened through the air and vapor barrier and exterior sheathing to the LGMF structure. Z-girsts spaced at maximum 24 inches o.c., minimum 16 ga.

1. Z-Girts and Miscellaneous Framing Components: Cold-formed metallic coated steel sheet, ASTM C 645, Grade 50, with ASTM A 653/A 653M, G90 (Z180) hot-dip galvanized zinc coating.
   a. Z-girts: 0.053 inch / 16 ga. (1.34 mm) minimum
   b. Hat Channels: 0.053 inch/16 ga. (1.34 mm) minimum.
   c. Sill Channels: 0.053 inch/16 ga. (1.34 mm) minimum.
   d. Other Required Shapes: 0.053 inch/16 ga. (1.34 mm) minimum.

2.03 AUXILIARY MATERIALS

A. Rivets for exposed attachment flush to face of cementitious panels fastened into vertical “T” and “L” profile furring strip support members (horizontal soffits). Panel fastener holes to be factory-drilled by panel manufacturer.

1. Color-matched powder coated aluminum rivet face fasteners for façade panels; provided by panel manufacturer

B. Stainless Steel Drill Screws: Of sufficient lengths and sizes to securely fasten support structure to building wall framing members, and as follows:

1. Screws complying with ASTM C 1002 for fastening to steel members less than 0.033 inches (0.84 mm) thick.
2. Screws complying with ASTM C 954 for fastening to steel members from 0.033 to 0.112 inches (0.84 to 2.84 mm) thick.

C. Black felt breathable membrane to be applied to rigid insulation at all open joints from grade to 8 ft. above grade: Vaproshield Revealshield SA or equal compatible with insulation. Membrane function is solely visual.

D. Vent Screen: As shown on the Drawings at the top and bottom of the elevation to close off the cavity: minimum 26 ga. perforated aluminum brake metal with maximum ¼ inch openings and minimum 75% openness.

2.04 FABRICATION

A. Fabricate wall panels and accessory items in accordance with manufacturers' recommendations and approved submittals.

B. Panels shall be fabricated to size, with all concealed/undercut or face fastened anchor holes factory-drilled by the concrete panel manufacturer.

C. Field-cut panels and drill face-fastening anchor holes in accordance with the concrete panel manufacturer's written directions.

D. Fabricate all panels to profiles, colors and textures per samples and approval selected by the Architect.

E. Fabricate panels in accordance with manufacturers' Quality Management System Tolerances and Acceptance Criteria.

2.05 FABRICATION TOLERANCES

A. Manufacturing Tolerances: Manufacture GFR concrete panels so each finished unit complies with the following dimensional tolerances.

1. Overall Height and Width of Units, Measured at the Face Adjacent to Mold: plus or minus 1/16 inch.
2. Weight of finished panels not to exceed 4.5 pcf.
3. Edge Return Thickness: Plus 5/8 inch, minus zero inch.
4. Texture and Reveal Depth: Maximum 1/8 inch.
5. Thickness: Plus 1/8 inch, minus zero inch.

6. Variation from Square or Designated Skew (Difference in Length of Two Diagonal Measurements): Plus or minus 1/16 inch per 72 inches maximum.

7. Local Smoothness: 1/8 inch per 10 feet.

8. Bowing: Not to exceed L/240 unless unit complies with erection tolerances using connection adjustments.

9. Length and Width of Block Outs and Openings within One Unit: Plus or minus 1/4 inch.

10. Location of Window Opening within Panel: Plus or minus 1/4 inch.

11. Maximum Permissible Warpage of One Corner out of the Plane of the Other Three: 1/16 inch per 12 inches of distance from nearest adjacent corner.

B. Position Tolerances: Measured from datum line locations, as indicated on Shop Drawings.

1. Panel Alignment: Plus or minus 1/8 inch.

2. Special Handling Devices: Plus or minus 3 inches.(where applicable)

3. Location of Bearing Devices: Plus or minus 1/16 inch.

4. Cutouts: Plus or minus 3/8 inch. Refer to manufacturer's guide to cutouts and notching of panels in the field cutting instructions.

C. Color Variation and Aggregate Distribution Variation Acceptance Criteria: Per Manufacturer's Tolerances and Acceptance Criteria.

D. Blemishes and Chips Acceptance Criteria: Per Manufacturer's Tolerances and Acceptance Criteria.

E. Acceptance of installed panels shall be assessed when viewed from a distance of 20 ft., under even light, and from a position 90 degrees to the building elevation, except where panels are installed at or near grade along a paved path where they shall be assessed the greater distance of 5 ft., or the edge of the pavement closest to the panels.

PART 3 EXECUTION

3.01 MANUFACTURERS' INSTRUCTIONS

A. Compliance: Comply with manufacturers' product data, including product technical bulletins, product catalog installation instructions and product carton instructions for installation.

3.02 EXAMINATION

A. Examine substrate and framing members for alignment.

B. Notify Architect of conditions that would adversely affect installation.

C. Do not begin surface preparation or installation until unacceptable conditions are corrected.

D. Ensure that weather barriers (AVB) are properly installed, complete and undamaged.

3.03 ERECTION/INSTALLATION

A. Clean substrates of projections and substances detrimental to application.

B. Install panels in accordance with manufacturer's design and installation manual and recommendations.

C. Coordinate panel installation with rain drainage work, flashing, trim, soffit, roofing, parapet, wall and other adjoining work to provide a leak-proof, secure and non-corrosive installation.

D. Install wall reinforcements, black felt membrane, channel cleats, clips, hangers, and other accessories required for connecting wall panels to supporting members and backup materials per project/façade engineers approved design.

E. Lift concrete wall panels and install without damage.

F. Install concrete panels level, plumb, square, and in alignment.

G. Provide a minimum of ¼ inch (6 mm) expansion at panel edges.

1. Do not seal joints.
2. Provide 3/4" inch joint at the bottom and top of exterior applications as detailed in the Drawings.

H. Follow shop drawings for sub-framing support and fastener location and spacing.

I. Provide a minimum ¾ inch (19 mm) clear air gap behind panel. Install vent strips at top and bottom of wall as detailed.

J. Provide temporary supports and bracing as required to maintain position, stability, and alignment of panels until permanent connections are completed.

1. Maintain horizontal and vertical joint alignment and uniform joint width.
2. Remove temporary shims, wedges, and spacers as soon as possible after connecting is complete.
3. Remove temporary projecting hoisting devices.

3.04 ERECTION TOLERANCES

A. Erect cementitious panels to comply with the following noncumulative tolerances:

1. Top Elevation from Nominal Top Elevation as follows: 1/4 inch
2. Exposed Panel Face Relative to Adjacent Panel: 3/16 inch
3. Maximum Plumb Variation over the Lesser of Height of Structure or 25 feet: 1/4 inch
4. Plumb in any 10 feet of Element Height: 1/8 inch
5. Maximum Offset in Vertical/Horizontal Alignment of Matching Edges: 1/8 inch
6. Face Width of Joint as follows (governs over joint taper):
7. Panel Dimension 20 feet or Less: 1/4 inch
8. Maximum Joint Taper in 10 Feet: 1/8 inch
9. Differential Bowing, as Erected, between Adjacent Members of Same Design: 1/8 inch

3.05 CLEANING AND PROTECTION

A. Perform cleaning procedures according to GFR concrete C panel manufacturer's written instructions.

B. Clean soiled surfaces with water, using soft fiber brushes and sponges, and rinse with clean water. Mild detergent may be used if water alone is not satisfactory. Power washing is permitted, if the spray is not concentrated and nozzle is not held within 5 ft. for the panel surface. Prevent damage to concrete surfaces and staining of adjacent materials.

C. Should the standard cleaning procedure be found deficient is special circumstances, do not

D. Prevent damage to GFR concrete surfaces and staining of adjacent material.

E. The installer is responsible for removing all metal, and concrete scraps, clips, or fasteners along with crates and packing materials from this work, from the site when the installation is complete.

END OF SECTION

SECTION 078120

SPRAY APPLIED FIREPROOFING

PART 1 GENERAL

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish and install the following as shown on the Drawings and specified herein:

1. Intumescent fireproofing

2. Spray-on fireproofing

3. Other fireproofing shown on the drawings to be “By SECTION 078120”.

B. LEEDv4-S Requirements:

1. The work of this section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEEDV4-S Certification is an Owner Requirement that is critical to secure project funding from the Massachusetts School Building Authority. LEEDV4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.

2. For all adhesives, sealants, paints and coatings, meet the LEED requirements for IEQ Credit 2 and as defined in Subparagraph 2.04 of Section 018113 - SUSTAINABLE DESIGN REQUIREMENTS.

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be furnished and installed by the designated SECTIONS:

1. Structural Steel members: SECTION 051200-STRUCTURAL STEEL FRAMING.

2. Spray foam insulation: SECTION 072100-INSULATION.

3. Smoke and firesafing insulation at fire rated masonry walls: SECTION 040001-MASONRY.

4. Firesafing and smoke stopping at fire rated partition penetrations: By Trade responsible for penetration

1.04 SUBMITTALS

A. Submit complete shop drawings in accordance with SECTION 013300-SUBMITTALS.

B. Shop drawings shall include manufacturer's specifications, and installation instructions and details.

C. Manufacturer's data - Submit to the Architect copies of manufacturer's specifications and installation and application instructions for all herein specified, certified test results, recommendations for sealing penetrations and perimeters, and other data as may be required.

D. Fire Testing:

1. Submit evidence that the aggregate slurry fireproofing has been subjected to full-scale UL 263/ASTM E119 fire testing at Underwriters Laboratories Inc., or another accredited laboratory, by the manufacturer.

E. Thickness Schedule: Provide schedule indicating material to be used, structural elements to be protected with spray applied fireproofing, hourly rating and material thickness provided and appropriate references.

F. Test Data: Independent laboratory test results for fireproofing shall be submitted for the following performance criteria:

1. Bond Strength per ASTM E736
2. Compressive Strength per ASTM E761
3. Deflection per ASTM E759
4. Bond Impact per ASTM E760
5. Air Erosion per ASTM E859
6. Corrosion Resistant per ASTM E937
7. High Speed Air Erosion per ASTM E859
8. Surface Burning Characteristics per ASTM E84
9. Combustibility per ASTM E1354 Cone Calorimeter
10. Mold Resistance per ASTM G21

G. LEED for Schools submittals (Refer to SECTION 013300 – SUBMITTALS).

1. Relevant supporting documentation required by LEED for School v4 and as detailed in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
2. A completed LEED MATERIALS REPORTING FORM, per SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

3. Product substitution requests are subject to additional LEEDv4-S submittal requirements, see SECTION 012500 – SUBSTITUTION PROCEDURES.

1.05 REFERENCE STANDARDS (INTUMESCENT)

A. Underwriters Laboratories Inc. (UL) Fire Resistance Directory.

B. ICC Evaluation Services – ES Report (ESR-1092)

C. Test Standards

1. UL 263 (ASTM E119) – Fire Tests of Building Construction and Materials.
2. ASTM E84 (UL723) – Surface Burning Characteristics of Building Materials. Flame Spread Maximum: 5 and Smoke Developed Maximum: 35.
3. ASTM D2240 – Durometer Hardness (Shore D Only). Minimum: 69 Shore D.
4. ASTM D2794 – Impact Resistance. Intrusion minimum: 152 inch-lb. (17.17 Nm).
5. ASTM D4060 – Abrasion Resistance. Maximum 0.2850 grams/1000 cycles.
6. ASTM D4541 – Bond Strength. Minimum: 280 psi. (1931 k Pa.)

D. Steel Structures Painting Council (SSPC) Surface Preparation Standards.

E. Material manufacturer's current published information including, but not limited to, application guide.

F. AWCI Technical Manual 12-B "Standard Practice for the Testing and Inspection of Field Applied Thin-Film Intumescent Fire-Resistive Materials; an Annotated Guide", Latest Edition.

1.06 REFERENCE STANDARDS (SPRAY-ON FIREPROOFING)

A. American Society for Testing and Materials (ASTM):

1. ASTM E84 Surface Burning Characteristics
2. ASTM E119 Standard Methods of Fire Tests of Building Construction and Materials
3. ASTM E605 Standard Test Methods for Thickness and Density of Sprayed Fire-Resistive Material Applied to Structural Members
4. ASTM E736 Cohesion/Adhesion of Sprayed Fire-Resistive Material Applied to Structural Members
5. ASTM E759 Effect of Deflection on Sprayed Fire-Resistive Material Applied to Structural Members
6. ASTM E760 Effect of Impact on Bonding of Sprayed Fire-Resistive Material Applied to Structural Members

7. ASTM E761 Compressive Strength of Sprayed Fire-Resistive Material Applied to Structural Members
8. ASTM E859 Air Erosion of Sprayed Fire-Resistive Material Applied to Structural Members
9. ASTM E937 Corrosion of Steel by Sprayed Fire-Resistive Material Applied to Structural Members
10. ASTM E1354 Cone Calorimeter
11. ASTM G21 Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi

B. Underwriters Laboratories Inc. (UL) Fire Resistance Directory (Latest Edition)

1. UL/ANSI 263 Fire Tests of Building Construction Materials

C. Association of the Wall and Ceiling Industry (AWCI)

1. AWCI Technical Manual 12-A: Standard Practice for the Testing and Inspection of Spray Applied Fire-Resistive Materials
2. AWCI Technical Manual 12: Design Selection Utilizing Spray Applied Fire-Resistive Materials

D. International Building Code (IBC)

1.07 QUALITY ASSURANCE

A. Intumescent Fireproofing:

1. Manufacturer – Company specializing in manufacturing fire protection products.
2. The intumescent fire resistive material shall be manufactured under the Follow-Up Service program of UL or ULC and bear the UL and/or ULC label (mark).
3. Applicator – A firm with expertise in the installation of fire resistive or similar materials.
4. Product – The product shall be approved by the architect and applicable authorities having jurisdiction.

B. Spray-On Fireproofing:

1. Fireproofing work shall be performed by a firm acceptable to the aggregate slurry fireproofing material manufacturer.
2. Products, execution, and fireproofing thicknesses shall conform to the applicable code requirements for the required fire-resistance ratings.
3. Contractor, fireproofing subcontractor and independent testing laboratory shall attend a pre-installation conference to review the substrates for acceptability, method of application, applied thicknesses, inspection procedures and other issues.

1.08 DELIVERY, STORAGE AND HANDLING

A. Deliver materials to the project in manufacturer's unopened packages, fully identified as to trade name, type and other identifying data. Packaged materials shall bear the appropriate labels, seals and UL label (mark) for fire resistive ratings and shall be stored at temperatures in compliance with manufacturer instructions in a dry interior location away from direct sunlight.

B. Material shall be delivered in original unopened packages, fully identified as to manufacturer, brand or other identifying data and bearing the proper independent testing laboratory labels for Surface Burning Characteristic and Fire Resistance Classification.

C. Material shall be stored off the ground, under cover, and in a dry location until ready for use. All bags that have been exposed to water before use shall be found unsuitable and discarded. Stock of material is to be rotated and used prior to its expiration date.

1.09 PROJECT/SITE CONDITIONS

A. When the temperature at the job site is less than 50º F (10º C), a minimum substrate and ambient temperature of 50º F (10º C) shall be maintained prior to, during, and a minimum of 72 hours after application. If necessary for job schedule, the General Contractor shall provide enclosures and heat to maintain proper temperatures and humidity levels in the application areas.

B. In enclosed areas, ventilation shall not be less than 4 complete air exchanges per hour until the material is dry.

C. Relative humidity shall not exceed 85% throughout the total period of application and drying for the intumescent fire resistive material, and must not exceed 85% throughout the application and drying for the protective decorative topcoat.

1.10 SEQUENCING AND SCHEDULING

A. Applicator shall cooperate in the coordination and scheduling of fire protection work to avoid delays in job progress.

B. The installation of piping, ducts, conduit or other suspended equipment shall not commence until the application of the thin-film fire resistive material is complete in that area.

PART 2 PRODUCTS

2.00 LEEDv4-S REQUIREMENTS

A. Products and materials used for this section of the work are required to meet the following criteria for LEEDv4-S materials Credits, and a completed LEEDv4-S MATERIALS REPORTING FORM shall be submitted for all materials in this SECTION.

1. Furnish any paints and coatings such that they meet the requirements for IEQ Credit 2 as defined in SECTION 018113 - SUSTAINABLE DESIGN REQUIREMENTS.

2.01 MATERIALS

A. Intumescent fireproofing where shown on the Drawings

1. Intumescent fireproofing shall be water-based primer and finish system, spray applied at minimum thickness for interior structural steel within rated egress stairwells for a smooth, architectural finish, “Albi Clad TF” and “Albi I490W” rust inhibitive acrylic primer as manufactured by Albi Manufacturing Division of Stan Chen, Inc., “A/D FireFilm III” manufactured by Carboline Company, “Cafco Sprayfilm WB-5” as manufactured by Isolatek International or an approved equal that has been tested and conforms to Underwriters Laboratory Tests for a one hour rating for the respective conditions shown on the drawings in accordance with the procedures of ASTM E119.

B. Intumescent fire resistive material shall be applied in accordance with drawings and/or specifications, and shall have been tested in accordance with the procedures of UL 263 or ASTM E119 or CAN/ULC-S101, and reported by Underwriters Laboratories, Inc. or Underwriters Laboratories of Canada only.

C. Thin-Film Fire-Resistive Intumescent Mastic Coating: Factory-mixed formulation.

1. Water-Based Formulation: Approved by manufacturer and authorities having jurisdiction for indicated use.
    a. Intumescent fireproofing shall meet the VOC requirements of CARB 2007 SCM for Architectural coatings or SCAQMD, Rule 1168.
2. Verify with manufacturer that products selected are suitable for use indicated.
3. UL Fire Tested Designs Only based on UL 263 (ASTM-E119).
4. Current ICC Evaluation Service Report
5. To assure an acceptable Architectural finish, no mesh is allowed.
6. A representative mock-up sprayed Architectural finish sample must be submitted, reviewed, and accepted by the architect in advance.

D. Sprayed-on fireproofing where designated on the Drawings

1. Sprayed-on fireproofing shall be factory mixed, medium density, non-asbestos cementitious material, “Monokote” Z-106 as manufactured by W.R. Grace and Co., Pyrolite 22 as manufactured by Carboline Company, “Cafco 400” as manufactured by Isolatek International or an approved equal that has been tested and conforms to Underwriters Laboratory Tests for the ratings for the respective column floor and roof system conditions shown on the drawings, in accordance with the procedures of ASTM E-119.

   Note: Non-cementitious materials will not be considered as an equal.

2. Physical Performance Characteristics: Fireproofing material shall meet the following physical performance standards:

   a. Dry Density: The field density shall be measured in accordance with ASTM Standard E605. Minimum average density shall be that required by the manufacturer, or as listed in the UL Fire Resistance Directory for each rating indicated, or as directed by the authority having jurisdiction, or a minimum average 350 kg/m^3 (22 pcf) whichever is greater.

   b. Deflection: Material shall not crack or delaminate from the surface to which it is applied when tested in accordance with ASTM E759.

   c. Bond Impact: Material subject to impact tests in accordance with ASTM E760 shall not crack or delaminate from the surface to which it is applied.

   d. Bond Strength: Fireproofing, when tested in accordance with ASTM E736, shall have a minimum average bond strength of 94.5 kN/m^2 (2,000 psf) and a minimum individual bond strength of 71.8 kN/m^2 (1,500 psf).

   e. Air Erosion: Maximum allowable total weight loss of the fireproofing material shall be 0.00 g/m^2 (0.00 g/ft^2) when tested in accordance with ASTM E859. Sample surface shall be “as applied” (not pre-purged) and the total reported weight loss shall be the total weight loss over a 24 hour period from the beginning of the test.

   f. High Speed Air Erosion: Materials to be used in plenums or ducts shall exhibit no continued erosion after 4 hours at an air speed of 12.7 m/s (47 km/h) [2500 ft/min (29 mph)] when tested per ASTM E859.

   g. Compressive Strength: The fireproofing shall not deform more than 10% when subjected to compressive forces of 966 kPa (20,189 psf) and 719 kPa (15,077 psf) for interior and exterior exposures respectively when tested in accordance with ASTM E761.

3. Corrosion Resistance: Fireproofing applied to steel shall be tested in accordance with ASTM E937 and shall not promote corrosion of steel.

4. Abrasion Resistance: No more that 15 cm3 shall be abraded or removed from the fireproofing substrate when tested in accordance with the test methods developed by the City of San Francisco, Bureau of Building Inspection

5. Impact Penetration: The fireproofing material shall not show a loss of more than 6 cm3 when subjected to impact penetration tests in accordance with the test methods developed by the City of San Francisco, Bureau of Building Inspection.

6. Surface Burning Characteristics: Material shall exhibit the following surface burning characteristics when tested in accordance with ASTM E84:
   Flame Spread 0
   Smoke Development 0

7. Resistance to Mold: The fireproofing material shall be formulated at the time of manufacturing with a mold inhibitor. Fireproofing material shall be tested in accordance with ASTM G21 and shall show resistance to mold growth for a period of 28 days for general use.

8. Combustibility: Material shall have a maximum total heat release of 20 MJ/m2 and a maximum 125 kW/m2 peak rate of heat release 600 seconds after insertion when tested in accordance with ASTM E1354 at a radiant heat flux of 75 kW/m2 with the use of electric spark ignition. The sample shall be tested in the horizontal orientation.

9. Provide accessories to comply with manufacturer's recommendations and to meet fire resistance design and code requirements. Such accessories include, but are not limited to, any required or optional items such as bonding agents, mechanical attachments; application aids such as metal lath, scrim, or netting; and Monokote Accelerator.

10. Submit evidence that the Portland cement based aggregate slurry fireproofing has been tested per ASTM E119 by Underwriters Laboratories Inc or an other accredited testing laboratory. Include evidence that the fire testing was sponsored by the manufacturer and that the material tested was produced at the manufacturer's facility under the supervision of laboratory personnel.

PART 3 EXECUTION

3.01 PREPARATION

A. All surfaces to receive thin-film fire resistive material shall be clean, dry and free of oil, grease, loose mill scale, dirt, dust or other materials which would impair bond of the thin-film fire resistive material to the surface. Any cleaning of the surfaces to receive fire resistive material shall be the responsibility of the General Contractor or steel erector, as outlined in the structural steel section.

B. Confirm compatibility of surfaces to receive thin-film fire resistive material. Steel surfaces shall be primed with a compatible primer approved by the thin-film fire resistive material manufacturer.

C. Provide masking, drop cloths or other suitable coverings to prevent overspray onto surfaces not intended to be coated with intumescent coating.

3.02 MOCK UP

A. Before proceeding with the work, the applicator shall apply the thin-film fire resistive material to a section witnessed by the architect's or owner's representative. The application shall be subject to their approval and shall be used as a guide for texture and thickness of the finished work.

3.03 INSPECTION AND TESTING

A. In addition to continuous Wet Film Thickness checks performed by applicator during application, the installed intumescent material shall be inspected by a qualified independent testing laboratory for thickness in accordance with the AWCI Technical Manual 12-B "Standard Practice For The Testing and Inspection Of Field Applied Thin-Film Intumescent Fire-Resistive Materials; an Annotated Guide", Latest Edition, before application of the topcoat.

B. The results of the above tests shall be made available to all parties at the completion of each area and approved prior to the application of topcoat.

3.04 SPRAY FIREPROOFING INSTALLATION

A. Apply sprayed-on cementitious and intumescent fireproofing in strict accordance with applicable U.L. Designs and manufacturer’s approved application instruction and procedures. The following fire resistance ratings are required; refer to drawings for locations.

1. Structural framing at stair shafts: 1 hour.
2. Underside of floor construction at third floor Electrical Room (BDA L316): 2 hours.
3. Underside of second floor construction above Elevator Machine Rooms B126 and L128B and top of elevator shafts: 2 hours.
4. Underside of second and third floor construction on either side of building separation joints: 2 hours.

B. Application of sprayed fireproofing shall not begin until the General Contractor and the Fireproofing Applicator have inspected the surfaces to receive fireproofing to determine if surfaces are acceptable to receive the fireproofing material. All surfaces to receive sprayed fireproofing shall be free of oil, grease, paint/primers, loose mill scale, dirt or other foreign substances which may impair proper adhesion of the fireproofing to the substrate. Where necessary, priming and/or cleaning or surfaces to receive fireproofing shall be the responsibility of the fireproofing applicator. The General Contractor shall provide heat, ventilation and temporary enclosure as may be required for the application of spray-on fireproofing in accordance with SECTION 015000 - TEMPORARY FACILITIES AND CONTROLS.

C. Prior to application of fireproofing, clips, hangers, support sleeves and other attachments required to penetrate the fireproofing shall be in place. Ducts, piping, equipment or other suspended matter which would interfere with the application of fireproofing materials shall not be positioned until fireproofing work is complete.

D. Provide masking, drop cloths or other satisfactory coverings so as to prevent overspray of sprayed fireproofing.

E. Application equipment and application procedure shall conform to the material manufacturer's application instructions. All patching and repairing of sprayed fireproofing, due to the work of other trades, shall be performed under this SECTION.

F. The Architect shall select, and the Owner will pay, an independent testing laboratory to sample and verify the thickness and density of the fireproofing in accordance with provisions of ASTM E605, "Standard Test Methods for Thickness and Density of Sprayed Fire-Resistive Materials Applied to Structural Members", the "Inspection Procedure for Field-Applied Sprayed Fire Protection Materials" as published by the AWCI, or Uniform Building Code Standard No. 43-8 entitled "Thickness and Density Determination for Spray-Applied Fireproofing". The results of the above tests shall be made available to all parties at the completion of each floor.

G. After the completion of the fireproofing work, application equipment shall be removed. Permanently exposed to view walls, floors, piping and other surfaces are to be left in a scraped clean condition.

3.05 CLEAN UP AND REPAIR

A. Upon completion of installation, all excess material, overspray and debris shall be cleared and removed from the job site.

B. All patching of and repair to thin-film fire resistive material, due to damage by other trades, shall be performed under this section and paid for by the trade responsible for the damage. Patching shall be performed by an applicator with expertise in the installation of fire resistive or similar materials. Repair shall be in accordance with UL design number guidelines and manufacturers written application instructions.

END OF SECTION

Division 8
Doors and Windows

SECTION 080001

METAL WINDOWS

*(Filed Sub-Bid Required)

PART 1 GENERAL

1.00 TIME, MANNER AND REQUIREMENTS FOR SUBMITTING SUB-BIDS

A. Sub-bids shall be submitted in accordance with provisions of the General Laws (Ter. Ed.), Chapter 149, Section 44A to 44L, inclusive, as amended. The time and place for submission to Sub-Bids shall be set forth under INSTRUCTIONS TO BIDDERS.

B. Each Sub-Bid filed with the Awarding Authority must be accompanied by BID BOND, or CERTIFIED CHECK, or a TREASURER'S CHECK or CASHIER'S CHECK issued by a responsible bank or trust company, payable to the **City of Amesbury** in the amount stipulated in the INSTRUCTIONS TO BIDDERS. A Sub-Bid accompanied by any other form of bid deposit than those specified will be rejected.

C. Each Sub-Bid submitted for the work, under this SECTION, shall be on a form furnished by the Awarding Authority, and required by SECTION 44F of Chapter 149 of the General Laws, as amended.

D. Work to be performed under this SECTION is shown on Contract Drawings numbered:

G.0.01, G.0.02, G.0.04-G.0.08, inclusive; 2.1.00-2.8.03, inclusive; 3.4.01-3.9.15, inclusive; 4.1.01-4.3.02, inclusive; 5.1.01-5.2.07, inclusive; 5.4.01-5.4.11, inclusive; 5.6.01-5.6.13, inclusive; and 10.0.01-10.3.13, inclusive.

Remaining Contract Drawings are included for reference and coordination.

E. Additional Requirements:

1. Sub-bidder's attention is directed to Massachusetts G.L. Chapter 149 §44H, as amended, which provides in part as follows:

2. Each sub-bidder shall list in Paragraph E of the "Trade Contractor Bid Form" the name and bid price of each person, firm or corporation performing each class of work or part thereof for which the Section of the Specifications for that sub-trade requires such listing, provided that, in the absence of a contrary provision in the Specifications, any sub-bidder may, without listing any bid price, list his own name or part thereof and perform that work with persons on his own payroll, if such sub-bidders, after sub-bid openings, shows to the satisfaction of the Awarding Authority that he does customarily perform such class of work with persons on his own payroll and is qualified to do so. This Section of the Specifications

requires that the following classes of work shall be listed in Paragraph E under the conditions indicated herein.

Class of Work	Specification Paragraphs
(1) Security and UV Films	2.12., 2.14, 3.05, 3.06

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a sub-bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish and install the following items required to complete the work of this SECTION, as shown on the Drawings and specified herein:

1. Fixed and operable aluminum thermal-break window units.
2. Aluminum sills with finished end caps at aluminum windows, aluminum closure panels, insulated infill panels, brake metal covers, trim and flashing; extruded metal subframe extensions and panning; and all other trim indicated by “SECTION 080001-METAL WINDOWS” on the Drawings.
3. Aluminum pressure (curtain) walls with inserted operable “zero/low-sight line” vent units, aluminum entry doors and frames.
4. Interior aluminum pressure wall and aluminum doors.
5. Interior aluminum storefront framing and doors.
6. Steel angles attached to tubular steel girts and all supplemental steel, plates, angles and the like necessary for curtainwall bracing
7. All glass and glazing materials including spandrel glass panels for aluminum operable windows, fixed windows, curtainwall frames, storefront frames, and doors furnished and installed under this SECTION, factory installed to the fullest extent possible.
8. Insect screens at all operable window units with wickets as required to operate windows.
9. Perimeter sealants at exterior and interior joints of windows, curtainwalls and storefronts between adjacent masonry and/or other dissimilar materials as shown on the drawings.
10. Sealing windows, curtainwall system and exterior storefront system to the air and vapor barrier.
11. Internal sealants for joints between items furnished and installed under this Section including metal-to-metal caulking/ sealant.

12. Foam insulation within frame and mullions at windows, storefront, curtainwall, entry frames and panning trim and where shown on the drawings to be by SECTION 080001-METAL WINDOWS.

13. Security film applied to the interior surface of all building perimeter glass where any part of glass is ≤ 4 ft. above finished grade to the first mullion above 4 ft. (above grade) and as shown on the Drawings.

~~14. Mirror interlayer sandwiched between laminated outer lites at glazing units in Administration Area windows.~~

14. UV protection film applied to interior surface of designated windows in lobby.

15. Custom-sized interior security transaction window.

16. Aluminum sliding door system at Administration.

17. Sample windows / curtainwall at exterior mock-up. Refer to SECTION 014339-EXTERIOR MOCK-UPS.

B. NOTE: Windows, storefronts, curtainwall, entry configurations and accessory shapes as detailed and specified herein, shall establish the type of units and materials to be used to satisfy the performance and aesthetic requirements of this project. Particular attention should be paid to the details and sections of the material depicted on the architectural drawings which indicate required dimensions, depths and generally acceptable profiles.

C. Install the following items furnished under the designated SECTIONS:

1. Semi-rigid insulation at interior face of spandrel glazing: SECTION 072100-INSULATION.

2. Hardware for aluminum doors and frames within curtainwall and storefront systems: SECTION 087100-FINISH HARDWARE.

3. Magnetic intrusion alarm contacts for aluminum doors and frames: SECTION 260001-ELECTRICAL.

4. Preformed and prefinished sill flashing and base wall flashing at aluminum curtainwall sills: SECTION 074213-PREFORMED CLADDING.

D. Coordinate with SECTION 260001-ELECTRICAL for exit signs, fire alarm pull stations, door entry access system and other electrical items to be mounted on, and fed concealed within, curtainwall members.

E. Coordinate with SECTION 071326-AIR AND VAPOR BARRIERS for sealing all window systems to the air and vapor barrier.

F. The Metal Window Subcontractor shall furnish, install and maintain in safe, adequate condition all lifts, hoisting, staging and scaffolding that are necessary for the proper execution of the work of this SECTION.

G. LEEDv4-S Requirements:

1. The work of this section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEEDv4-S Certification at "Silver" Level is an Owner Requirement that is critical to secure project funding from the Massachusetts School Building Authority. LEEDv4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.

2. For all adhesives, sealants, paints and coatings, meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in Section 018113 – SUSTAINABLE DESIGN REQUIREMENTS.

3. Meet the LEEDv4-S requirements for MR Credit 2, Building Product Disclosure and Optimization – Environmental Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers' product documentation for each product having an Environmental Product Declaration (EPD).

H. Exterior Envelope Commissioning – Refer to SECTION 019113-BUILDING COMMISSIONING REQUIREMENTS.

~~I. Furnish the following for installation under the designated SECTIONS:~~

~~1. Prefinished aluminum sills at composite panel system: SECTION 074213-PREFORMED CLADDING.~~

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be performed under the designated SECTIONS:

1. Construction of mock-up: SECTION 014339-EXTERIOR-MOCK-UPS.

2. Wood blocking: SECTION 061000-ROUGH CARPENTRY.

3. Furnishing and installing glass in interior wood and hollow metal doors and hollow metal windows: SECTION 080002-GLASS AND GLAZING.

4. Pressed metal frames and metal doors: SECTION 081113-HOLLOW METALWORK.

5. Aluminum panels, soffits, fascias and trim: SECTION 074213-PREFORMED CLADDING.

6. Continuous air and vapor barrier at exterior wall construction: SECTION 071326-AIR AND VAPOR BARRIERS.

7. Final cleaning and protection of installed materials: SECTION 017700-PROJECT CLOSEOUT.

8. Wiring of intrusion alarm system installed on doors, power assist panel, A-phone, card reader, interior and exterior light fixtures and exit signs. All cutting, drilling and channeling of frames and panels shall be performed by: SECTION 260001-ELECTRICAL.

9. Structural steel: SECTION 051200-STRUCTURAL STEEL FRAMING.

10. Miscellaneous steel: SECTION 050001-MISCELLANEOUS AND ORNAMENTAL IRON.

1.04 SUBMITTALS

A. Submit complete shop drawings in accordance with SECTION 013300-SUBMITTALS.

1. Shop drawings shall include a complete window schedule, large scale detail of curtainwall, entrances, including jambs, trim sections, anchorage and reinforcements and methods of connections.

2. Include with shop drawings all engineering computations for windows, pressure wall members, mullions, connections and anchorages, and for sunscreen construction furnished under this SECTION, prepared and stamped by a Structural Engineer registered in the Commonwealth of Massachusetts, and independent laboratory test reports verifying compliance with specified performance requirements.

3. Shop drawings shall show the various methods of glazing and a complete schedule of the locations of the various types of glass and thicknesses.

4. Shop drawings shall clearly show connection to and continuity with adjacent thermal, weather, air and vapor barriers.

B. Submit the following samples in accordance with SECTION 013300-SUBMITTALS.

1. Curtainwall, window and storefront: Frame section of each specified type showing all pertinent details – 12 x 12 inches, for each system specified herein.

2. Sealants, tapes and compounds requested by the Architect.

3. Color samples matching specified finishes and colors on 24” extruded section.

4. Each type of glass – 8 x 8 inches.

5. Operable window unit hardware of each specified type.

6. Security Film – 12 x 12 inches

~~7. Mirror Film – 12 x 12 inches.~~

7. UV Film – 12 x 12 inches.

C. Furnish and install sample window units in the mock-up exterior wall panels as specified under SECTION 014339-EXTERIOR MOCK-UPS and as shown on the Drawings.

1. Final Mock-Up: Following the Architect's review and approval of the mock-up panel, including those portions of the panel furnished and installed under other SECTIONS, a final mock-up panel shall incorporate all approved materials, colors, and methods of installation. This final mock-up shall be left on site to serve as the reference standard for appearance and workmanship as the work progresses. This Subcontractor shall, at no additional cost to the Owner, rebuild the portions of the mock-up furnished and installed under this SECTION using the final approved materials, colors and construction to complete the final mock-up.

2. Refer to SECTION 014339-EXTERIOR MOCKUPS for additional requirements.

D. Metal Window / Curtainwall / Storefront Manufacturer and Installer and Glass Manufacturer must mutually review the glass and glazing and metal windows submissions and individually warrant their products on the basis of that review. No Shop Drawings for Metal Windows and related glass and glazing shall be reviewed by the Architect without prior review and approval of these documents by both the window and glass manufacturers and the installer.

E. LEED for Schools Submittals (Refer to SECTION 013300-SUBMITTALS):

1. Relevant supporting documentation required by LEED for Schools v4 and as detailed in Section 018113-Sustainable Design Requirements.

2. A completed LEED MATERIALS REPORTING FORM, per SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

3. Product substitution requests are subject to additional LEED-S submittal requirements, Refer to SECTION 012500-SUBSTITUTION PROCEDURES.

1.05 COORDINATION OF ALUMINUM FINISH

A. Aluminum windows, curtainwalls, storefronts, doors and trim to be furnished and installed under this Section shall match in color and finish items furnished under the following Sections:

1. SECTION 074213-PREFORMED CLADDING: Preformed aluminum ACM and single skin cladding panels, copings, flashing and trim.

2. SECTION 070002-ROOFING AND FLASHING: Snap-on roof fascias and flashing.

B. It shall be the responsibility of both the Preformed Cladding Subcontractor and the General Contractor to jointly coordinate the finish operation with the other listed trades to achieve a uniform finish.

1.06 QUALITY ASSURANCE

A. Manufacturer shall have not less than five years of experience in manufacture of windows of this type and quality.

B. Engineering Responsibility: Engage a qualified professional engineer to prepare design calculations, shop drawings and other structural data.

1. The engineer shall make two visits to the site (once during installation and once after completion of the work) to inspect their respective components for conformance with the shop drawings.

C. Window Source Quality Control – 41/2 inch (minimum depth), aluminum windows: AW-PG135-C tested in accordance with AAMA/WDMA/CSA 101/I.S.2/A440-08:

1. Air infiltration test

a. ASTM E 283-04

b. Maximum air infiltration 0.1 CFM/Ft. of crack length at a test pressure of 6.24 PSF.

c. Refer to SECTION 019113-BUILDING COMMISSIONING REQUIREMENTS for additional field testing and performance criteria.

2. Water penetration test

a. ASTM E 547 & 331-00

b. No water penetration for 15 minutes when window is subjected to a rate of flow of 5 gal./hr./sq. ft. with differential pressure across window unit of 15 PSF.

c. Refer to SECTION 019113-BUILDING COMMISSIONING REQUIREMENTS for additional field testing and performance criteria.

3. Uniform load structural test

a. ASTM E 330-02

b. No member shall deflect more than 1/175 of its span when tested at static air pressure difference of 165 PSF with high pressure applied first on one side of unit and then on the other side.

c. At the conclusion of the test, with high pressure applied first on one side of unit and then on the other side, there shall be no glass breakage, permanent damage to fasteners, hardware parts (support arms or activating mechanisms) nor any other damage to window which would cause it to be inoperable. Permanent deformation of any frame or ventilator member shall not exceed 0.2% of its span.

4. Condensation Resistance Test:

   a. AAMA 1503.1

   b. Condensation Resistance Factor shall not be less than 72 (frame) and 67 (glass) when glazed with .25 center of glass U-Factor.

5. Thermal transmittance test:

   a. Tested with vents closed and locked per NFRC 100-2010.

   b. U-value (system rating) of the operable windows shall be not more than .46 (based on the center of glass U-value of .25 BTU/hr/sf/degree.

D. Curtain Wall Source Quality Control:

1. Air Infiltration Test

   a. Test unit in accordance with ASTM E 283 at a static air pressure difference of 6.24 psf (300 Pa).

   b. Air infiltration shall not exceed .06 cfm/SF (0.31 l/s•m²) of unit.

2. Water Resistance Test

   a. Test unit in accordance with ASTM E 331.

   b. The test for static water penetration (ASTM E 331) shall be conducted at an air pressure difference of 15.0 psf (720 Pa). There shall be no water leakage as defined by AAMA 501.1, paragraph 5.5.

3. Uniform Load Deflection Test

   a. Test in accordance with ASTM E 330.

   b. Deflection under design load shall not exceed L/175 for spans less than 162 in. (4114 mm).

   c. Deflection under design load shall not exceed L/240 +1/4 in. (6 mm) for spans greater than 162 in. (4114 mm).

4. Uniform Load Structural Test

   a. Test in accordance with ASTM E 330 at a pressure 1.5 times the design wind pressure.

b. At conclusion of the test there shall be no glass breakage, permanent damage to fasteners, curtain wall parts, or any other damage that would cause the curtain wall to be defective.

5. Condensation Resistance Test (CRF)

a. Test unit in accordance with AAMA 1503.1.

b. Condensation Resistance Factor (CRF) shall not be less than 74 (frame) and 65 (glass) when glazed with .25 center of glass U-Factor.

6. Thermal Transmittance Test (Conductive U-Factor)

a. For curtainwall performance based on fixed units, test unit in accordance with NFRC 100-2010.

b. Conductive thermal transmittance (U-Factor) shall not be more than .32 BTU/hr. when glazed with .25 center of glass U-Factor.

7. Seismic Performance

a. Test unit in accordance to AAMA 501.4 system to meet design displacement of 0.010 x the greater adjacent story height and ultimate displacement of 1.5 x the design displacement.

8. Sound Transmission Loss

a. Test unit in accordance with ASTM E 90-02.

b. Sound Transmission Class (STC) shall not be less than 29.

E. Storefront Quality Control (Fixed Units):

1. Air Infiltration Test

a. Test unit in accordance with ASTM E 283 at a static air pressure difference of 6.24 psf (299 Pa).

b. Air infiltration shall not exceed .06 cfm/SF (.30 l/s•m²) of unit.

2. Water Resistance Test

a. Test unit in accordance with ASTM E 331.

b. There shall be no uncontrolled water leakage at a static test pressure of 10.0 psf.

3. Uniform Load Deflection Test

a. Test in accordance with ASTM E 330.

b. Deflection under design load shall not exceed L/175 of the clear span.

4. Uniform Load Structural Test

a. Test in accordance with ASTM E 330 at a pressure 1.5 times the design wind pressure.

b. At conclusion of the test, there shall be no glass breakage, permanent damage to fasteners, storefront parts, or any other damage that would cause the storefront to be defective.

5. Condensation Resistance Test (CRF)

a. Test unit in accordance with AAMA 1503.1.

b. Condensation Resistance Factor (CRF) shall not be less than 56 (frame) / 63 (glass) when glazed with 63 center of glass U-Factor. (See chart at end of section).

6. Thermal Transmittance Test (Conductive U-Factor)

a. With ventilators closed and locked, test unit in accordance with NFRC 100-2010.

b. Conductive thermal transmittance (U-Factor) shall not be more than .38 BTU/hr•ft^2•°F when glazed with .25 center of glass U-factor using standard NFRC size.

F. Aluminum Window Inserts in Curtainwall Quality Control:

1. Air, water and structural test unit shall conform to requirements set forth in ANSI/AAMA/NWWDA 101/I.S.2/NAFS-08 and manufacturer's standard locking/operating hardware and insulated glazing configuration.

2. Test Procedures and Performances.

a. Windows shall conform to all ANSI/AAMA/NWWDA 101/I.S.2/NAFS-08 requirements for the window type referenced in 1.01.B. In addition, the following specific performance requirements shall be met.

3. Air Infiltration Test

a. With ventilators closed and locked, test unit in accordance with ASTM E 283 at a static air pressure difference of 6.24 psf (299 Pa).

b. Air infiltration shall not exceed .10 cfm/SF (.50 l/s·m^2)

4. Water Resistance Test

a. With ventilators closed and locked, test unit in accordance with ASTM E 331/ASTM E 547 at a static air pressure difference of 15.0 psf (720 Pa).

b. There shall be no uncontrolled water leakage.

5. Uniform Load Structural Test

a. With ventilators closed and locked, test unit in accordance with ASTM E 330 at a static air pressure difference of 90.0 psf (4309 Pa), both positive and negative.

b. At conclusion of test there shall be no glass breakage, permanent damage to fasteners, hardware parts, support arms or actuating mechanisms, nor any other damage that would cause the window to be inoperable.

6. Condensation Resistance (CRF)

a. Test unit in accordance with AAMA 1503.1.

7. Condensation Resistance (CR)

a. With ventilators closed and locked, test unit in accordance with NFRX 500-2010.

8. Thermal Transmittance Test (Conductive U-Factor)

a. With ventilators closed and locked, test unit in accordance with NFRC 100-2010.

G. Minimum structural design requirements for window and curtain wall systems.

1. Wind loading – +45 PSF/-49 PSF at non-salient areas. +45 PSF/-60 PSF at salient areas, unless greater design load is required by code.

H. Warranties: Copies of manufacturers' actual warranties for all materials to be furnished under this SECTION, clearly defining all terms, conditions, and time periods for the coverage thereof, including the following:

1. Total Window System

a. The metal window Subcontractor shall assume full responsibility for repair or replacement and shall in writing warrant for **three (3) years** following the date of substantial completion of the General Contract the satisfactory performance of the total window/curtainwall and storefront installation which includes that of the curtainwall members, hardware, glass (including insulated units), glazing, anchorage and setting system, sealing, flashing, and similar items as it relates to air, water, and structural adequacy or which exhibits defects in materials, workmanship, design or erection as called for in the specifications and approved shop drawings.

b. Any deficiencies due to such elements not meeting the specifications shall be corrected by the responsible contractor at contractor's expense during the warranty period.

c. The window manufacturer shall submit a signed warranty guaranteeing materials and workmanship for up to ten **(10) years** following the date of substantial completion of the General Contract, including repair or replacement of window, curtainwall and storefront extrusions weather-stripping, trim, finish and all hardware supplied by the curtainwall manufacturer.

2. Glass manufacturer's written standard of SIGMA warranty for insulating glass, covering replacement of insulating glass, wherever the hermetic seal has failed, for a period of ten (10) years from date of manufacture, said date being as impaired on each unit of insulating glass.

   a. Glass manufacturer's or film manufacturer's warranty shall cover all insulating glass having an applied security or UV film.

3. Finish system manufacturer's written warranty covering the prefinish system against color fading, chalking, and failure of film integrity for a period of not less **than 20 years** from date of Substantial Completion of the Contract.

1.07 TESTING

A. Field Testing – The Owner's 3rd party testing agency shall field test installed samples of windows and curtain walls in accordance with ASTM E1105. Cost of the initial testing shall be paid by the Owner, and cost to retest failed window / curtain wall units shall be paid by the window Subcontractor. The window Subcontractor shall assist with the Owner's field testing and shall make corrections to window installation required by the test results at no additional cost to the Owner.

B. Mock-Up Testing:

1. Contractor shall prepare and install mock-up samples in method proposed for building.
2. Contractor shall replace, repair or rebuild window installation in mock-ups until satisfactory field test results are obtained.
3. Satisfactory testing of mock-ups must be completed prior to installation of window assemblies on building.

C. Window Testing on Building:

1. Prior to the scheduled start of functional performance tests, Installer to submit Pre-Functional Test Statement to Project and Commissioning Teams indicating written acceptance of completed work and confirming readiness for functional field of this project to be tested are 100% complete and ready to be tested to confirm compliance with the Project's Performance Requirements.
2. Field testing shall be performed on representative production fenestration assemblies following both 50% and 75% completion as chosen by the CxA, OPM and Architect. Test specimens shall consist of different fenestration configurations/types during each test.

3. Partial Test Specimens:

   Some of the curtainwall assemblies in this project are large in size. Due to the length and width of these types of assemblies, there may be issues in constructing the test chamber specified by AAMA and ASTM – a test chamber that is able to encapsulate, and introduce a test pressure differential on the entire assembly.

   - To accommodate these conditions, some of the field testing performed on this project may be performed on a partial assembly/specimen, with prior approval by the CxA in advance.
   - This partial test specimen may consist of a portion of the curtainwall with a minimum size of 100 sf.
   - Each modified test specimen shall consist of a width of at least three vertical mullions and extend at least three horizontal mullions in height, including either or both the sill and head of the assembly.
   - No more than two total curtainwall tests shall be performed with a partial test specimen configuration.
   - With this partial test specimen configuration, air infiltration readings taken during this test may not be representative of the entire installed assembly and should be taken for reference only and not for measurement of conformance with project performance requirements.

D.

Minimum Functional Testing Performed by Third-Party Testing Agency			
Component	Test Method	Quantity	Frequency
Windows	Air Infiltration & Water Penetration: ASTM E783, ASTM E1105, AAMA 502	1 assembly	Mock-up
		2 assemblies	50% of Completion
		1of each window type assembly (5)	75% of Completion
Curtainwall Assemblies	Air Infiltration & Water Penetration: ASTM E783 ASTM E1105, AAMA 503	1 assembly	Mock-up or 25%
		2 assemblies	75% of Completion
	Water Penetration: AAMA 501.2	1 assembly	Mock-up or 25%
		2 assemblies	75% of Completion

Additional testing may be performed at the discretion of the OPM and Architect.

1. Successful tests will result in no water leakage after 15 minutes (static) or cumulative 15 minutes (cyclic) of 5.0 US gallons/ft^2 at a minimum pressure of 6.24 PSF.

2. Successful test will result in air infiltration no greater than 1.5 times the rate specified for each type of fenestration under Article 1.05 QUALITY ASSURANCE. Successful field testing for air infiltration of installed units will result in infiltration rates of:

   a. Windows: Less than 0.15 CFM/ft. of crack length at test pressure 6.24 PSF.

   b. Curtainwall (with fixed glazing): Less than 0.09 CFM/SF at air pressure differential of 6.24 PSF.

   c. Curtainwall (with ventilation inserts): Less than 0.15 CFM/SF at air pressure differential of 6.24 PSF.

   d. Storefront: Less than 0.09 CFM/SF at air pressure differential of 6.24 PSF.

E. Failed tests will result in additional testing of the failed specimen. Additional inspection and testing costs are at the cost of the GC. If the GC determines a subcontractor is responsible for a failed test, the GC will be responsible for collecting costs from the same. Test will be concluded only when satisfactory results are achieved. The following guidelines will be used in the event of a failed assembly test.

1. A failed mock-up test will result in a repeat of that test following repairs and requisite curing times. These tests will be repeated until the mock-up passes.

2. Field tested assemblies that fail will result in re-testing similar, randomly selected assemblies using a ratio of 5:1 up to 10 re-tested samples for a specific assembly type.

3. Failure of more than 10 similar assemblies will be grounds for testing every exemplar of the assembly type or demolition and re-construction of the assembly type for every instance of that assembly.

1.08 MAINTENANCE STOCK AND GLAZING SCHEDULE

A. Maintenance stock upon completion of the metal window work, furnish to the maintenance representative of the Owner the following materials for future maintenance replacement:

1. Window Operators – Four (4) of each type operators.

2. Insulating “Low-E” Glass Panels –Two (2) panels, sizes to be determined by the Architect.

3. Insect Screens – One for of each size of operable units.

B. Glazing Schedule – Upon completion of the metal windows work, furnish to the maintenance representative of the Owner three copies of a detailed glazing schedule, showing glass manufacturer, size, type, and location for every piece of glass installed under this section.

1.09 FIELD ADHESION TESTS

A. Perform adhesion tests on samples of sealant applied to prepared substrates at the site to assure that the proposed materials and installation procedures achieve adequate adhesion and that the optimum primers are selected. Schedule the testing and report the results at no additional cost to the Owner. If required by the Architect, request the sealant manufacturer's technical representative visit the site to assist with adhesion testing.

B. Perform jobsite sealant adhesion tests in accordance with the following:

1. Apply three sealant test strips to each jobsite substrate. Prepare three samples for each type of sealant proposed on each substrate.
2. Sealant test strips shall be a minimum of 4 inches long at each location. Apply a 1 inch wide strip of bond breaker tape across the edge of each test specimen to produce a tab for gripping the specimen during testing.
3. Prepare additional test samples for each primer or substrate preparation technique recommended by the sealant manufacturer. For substrates where adhesion may benefit from the use of a primer, prepare test strips with and without primer to evaluate the effect on adhesion.
4. Locate sealant test strips in areas approved by the Owner in advance. Remove all traces of sealant test residue on substrates to remain.
5. Install sealant sufficiently in advance of general sealant application to allow time for curing and testing, and in no case less than three weeks in advance.
6. After curing for at least three weeks, forcibly remove sealant test strips to check on the sealant adhesion. Failure must be by tearing within the sealant itself (cohesive failure). Sealant test samples that fail adhesively (that is, by pulling cleanly away from the substrate leaving little or no sealant residue) are unacceptable.
7. If sealant fails adhesively, modify sealant application procedures as recommended by the sealant manufacturer and repeat testing until satisfactory adhesion is achieved.
8. Notify Architect at least 48 hrs. prior to the installation of test samples and 48 hrs. in advance of performing pull-tests so that he can be present to observe the installation.
9. Provide a written report to the Architect describing the testing, the results, and the recommendations of the sealant manufacturer.

1.10 PRE-INSTALLATION CONFERENCE

A. After approval of all materials and at least 10 days prior to starting installation, a pre-installation conference shall be held at the job site. In attendance shall be (1) Architect, (2) General Contractor, (3) Window Subcontractor, (4) Manufacturer's Representative, and (5) Building Envelope Commissioning Agent.

B. The parties shall review Drawings, Specifications and approved materials. Correct conflicts, if any, between approvals and specification requirements before starting installation. Examine job site conditions, including inspection of substrate, material labels and methods of storing materials. Review installation procedures, scheduling and temperature requirements, and establish protection methods for finished work from other trades.

PART 2 PRODUCTS

2.00 LEEDV4-S REQUIREMENTS

A. Products and materials used for this section of the work are required to meet the following criteria for LEEDv4-S materials Credits, and a completed LEEDv4 MATERIALS REPORTING FORM shall be submitted for all materials in this SECTION:

1. Furnish any adhesives, sealants, paints and coatings, meet the requirements for IEQ Credit 2 as defined in SECTION 018113 – SUSTAINABLE DESIGN REQUIREMENTS.
2. Recycled Content. (See Section 018113 Sustainable Design Requirements for overall project recycled content requirements.) Aluminum framing members shall be produced using a minimum of 80% recycled materials (57% post-consumer and 23% pre-consumer).
3. Regional Content. (See Section 018113 Sustainable Design Requirements for overall project regional content requirements.) Contractor shall examine each product or material specification below for a stated minimum regional content requirement, and if none is stated, the requirements under 018113 shall govern.

2.01 MANUFACTURE

A. To establish a standard of quality, design and function, manufacture has been based upon EFCO Corporation, Monett, Missouri.

B. Similar window, curtainwall, storefront and entry systems by Architectural Window Manufacturing Corp., Rutherford, NJ; Wausau Window and Wall Systems, Wausau, WI or others and aluminum doors by Tubelite, Kawneer, or others will be considered for approval by the Architect upon receipt of adequate supporting data and samples.

2.02 ALUMINUM WINDOWS

A. Windows shall be aluminum thermal break windows with fixed lights and project-out awning vents and casement vents, as follows (Refer to Drawings for locations of window types):

1. “Series 450 X” frame depth: four and one half inches.

B. Materials:

1. Aluminum extrusion frame section shall be depths indicated in drawings for each location. Wall thickness shall be 1/8 inch minimum. Corners shall be of screw spline construction, and back sealed. Provide all reinforcing of frames necessary to meet the specified structural criteria.

2. Corners of ventilator frames shall be miter cut, reinforced with extruded corner blocks, hydraulically crimped, epoxied and mechanical fastened throughout. Corners of window frames shall be machined, mechanically fastened and sealed to form a watertight joint.

3. Windows shall be double weather-stripped using neoprene weather-stripping securely interlocked.

4. Windows shall be inside glazed except for:

    a. Spandrel glass covered by interior construction

    b. Glass that is obstructed by steel framing or interior construction and where indicated on the Drawings.

    c. Aluminum glazing beads shall be not less than ¾ inch in height.

5. No component of the window assembly, including but not limited to, the window frame, ventilator frames or hardware shall bridge or otherwise violate the thermal barrier in any way. Separation in frames, ventilator and mullions shall be a rigid, structural thermal barrier. The thermal barrier may be either "crimped-in place glass reinforced polyamide nylon" or "poured and de-bridged type." Reinforcing inserted in frames to meet specified performance requirements shall not bridge the thermal barrier.

6. Mullions, where required, shall be extruded aluminum incorporating the thermal-break feature.

7. Hardware for operable window vents shall be as follows:

    a. Hinges – Four bar type of heavy duty stainless steel fastened to both frame and ventilator with stainless steel screws.

    b. Locking Handles – Truth type 24 locking handles, single point or multiple point required for height.

    c. Operators for Project Out Awning Vents – Cam handles by Truth Hardware 25 Series TrimLine or an approved equal. Finish to be aluminum clear anodized.

    d. Furnish and install limit stops on all project out vents at all windows to restrict maximum opening to 4 in. Do not install limiters at casement windows used to access roof.

    e. Operators for Casement Vents – Rotovents, crank type series 22 by Truth Hardware, twin push arm design.

8. Screens – Screens at operable sections shall be of extruded aluminum frames, re-wireable and filled with 18 x 16 mesh aluminum cloth. Screen fastenings shall permit easy attachments and removal from the interior. Finish to match sash color. Access to operable window hardware shall be by wickets.

9. Finish – Windows shall be factory finished:

   a. Three coat system having a minimum film thickness of 1.2 mils, following specifications issued by the finish manufacturer, and meeting or exceeding AAMA SPEC. 2605 for High Performance Organic Coatings on Architectural Extrusions and Panels.

   b. Application of the finish shall be by an applicator approved by the finish manufacturer and shall be an approved equal product to manufacturer, color and finish.

   c. Coats: Fluoropolymer three-coat metallic system, consisting of 0.2 mil primer with a 0.80 mil PVCF fluoropolymer color coat containing metal flakes and a 0.50 mil PVDF fluoropolymer clear coat.

   d. Color: One custom metallic color to match Fluropon Classic Pewter – Centria Sundance Metallic – Clearcoat: 430A307.

   e. The Architect reserves the right to select the custom color match from the stated manufacturer's full line of metallic finishes.

2.03 ALUMINUM PRESSURE WALL

A. Curtainwall framing shall be EFCO 5600 Series with fiberglass pressure plates as follows:

1. Aluminum: Provide material of 6063-T5 alloy and temper to meet specified requirements and compatibility with specified finishes. Extrusions shall confirm with ASTM B 221, with extrusion tolerances complying with ANSI H35.2. Aluminum sheet shall comply with ASTM B209, with formed wall section of 1/8th inch.

2. Frames: Minimum principal wall thickness .093 inches. **Frame depth shall be as shown on the drawings**, with 2-1/2 inch sight-line and a glazing pocket accommodating 1/4 inch to 1 inch infill panels. Units shall be machined, mechanically fastened and sealed to form a watertight joint. Frames at exterior shall be thermally broken and shall be designed so that water entering the space around the unit shall be drained and shall not remain in contact with the edge seal of the glass at any point. System shall be outside glazed. Provide all reinforcing of frames necessary to meet the specified structural criteria.

3. Anchoring: Material shall be of adequate strength required to meet the uniform load deflection and structural requirements specified under paragraph 1.05.

   a. Fasteners: Concealed fasteners shall be aluminum, cadmium plated steel or heavy cadmium plated steel per GSA QQ-P-416C or ASTM A 165, zinc plated steel per ASTM B 633 or ASTM A 123, or 300 Series stainless steel. Exposed fasteners shall be 300 Series stainless steel.

b. Anchors: Concealed anchors shall be aluminum, zinc plated steel (after fabrication) per ASTM B633 or ASTM A123, stainless steel or carbon steel painted (after fabrication) with zinc chromate or other acceptable primers not containing lead. Exposed anchors shall be aluminum or 300 Series stainless steel.

c. Aluminum that is not protected by an organic coating shall be insulated from direct contact with steel, masonry, and non-compatible materials by a suitable insulating materials.

4. Pressure Plate:

a. Material shall be fiberglass composite with a flexural strength of 82 ksi (565 mpa) along the lineal's major axis.

b. Material thermal conductivity shall be no more than 2 BTU-in/hr-ft^2. °F (0.289 W/m^2-k).

5. Operable Vents: Thermally broken zero/low sightline storefront vent system, EFCO WV430 or equal.

a. Units to be structural silicone glazed per manufacturer's requirements.

b. Hardware, operators and screens shall conform to specification for aluminum windows under Article 2.02, paragraphs B.7-9.

6. Primary sealant at perimeter of curtainwall system shall be ultra-low modulus silicone rubber sealant, Dow Corning 790, or approved equal, meeting the following minimum requirements:

a. TT-S-001543A (COM-NBS) Class A.

b. TT-S-00230C (COM-NBS) Class A.

c. ASTM C-290 Type S, grade NS, Class 50, Use T, NT, M, G, A, O.

d. SCAQMD, Rule 1168 for low VOC sealants.

e. Primer shall be of a type as recommended by the manufacturer of the sealant. Primers shall be non-staining.

f. Joint beads shall be closed-cell polyethylene foam rod or closed-cell polyurethane foam rod, 1/3 greater in diameter than joint width. Beads shall be Tremco Backing, or equal, as recommended by the sealant manufacturer.

7. Finish and color shall be as specified under paragraph 2.02, B,9.

2.04 ALUMINUM STOREFRONT FRAMING

A. Interior storefront system shall be single glazed screw spline block (shear block at doors).

1. EFCO Series 402 (Flush Glazed Screw Spline), Wausau 1400 Series, AW 1700 series or approved equal.

B. General

1. All aluminum frame extrusions shall have a minimum wall thickness of .080 inches (2 mm).

2. All exposed work shall be carefully matched to produce continuity of line and design with all joints. System design shall be such that raw edges shall not be visible at joints.

C. Frame

1. Depth of frame shall not be less than 4 ½ inches (114 mm).

2. Face dimension shall not be less than 2 inches (50 mm).

D. Glazing

1. All units shall be “dry glazed" with gaskets on both exterior (as applicable) and interior of the glass.

E. Finish and Color

1. Shall be as specified under paragraph 2.02, B.9.

2.05 HINGED STILE AND RAIL DOORS

A. Except as otherwise specified, doors shall be EFCO Thermastile, thermally broken, Heavy Duty Series single acting aluminum, or approved equal, as noted below.

1. Wide stile exterior doors shall be EFCO D-502 wide stile (5 inches), thermally broken single action aluminum or approved equal.

2. Wide stile interior doors shall be EFCO D-518 non-thermal single action aluminum door or approved equal.

B. General: Refer to the Drawings for location and details.

C. Materials

1. Extrusions shall be 6063-T5 alloy and temper (ASTM B221 alloy G.S. 10A-T5). Major portions of the stiles shall be .1875 inches thick. Glazing beads shall be .050 inches thick, square edge. Stiles and rails shall be 2 inches deep.

a. Dimensions – Wide Stile Doors: 5 inch vertical stiles, 5 inch top rail and 10 inch bottom rail.

b. Refer to the drawings for sizes of intermediate horizontal rails.

2. Fasteners, where exposed, shall be aluminum, stainless steel or plated steel in accordance with ASTM A164. Perimeter anchors shall be aluminum or steel, providing that the steel is properly isolated from the aluminum.

3. Finish shall be as specified under paragraph 2.02, B,9.

4. Hardware – Shall be furnished under SECTION 087100-FINISH HARDWARE for installation under this Section.

5. Weatherstripping – Shall be manufacturer's standard for the various installation conditions. Weatherstripping shall be applied to door jambs, head, meeting stile and bottom rail.

6. Frame – Aluminum extrusions and stops integral with systems specified herein.

7. Prepare doors and frames required and install intrusion alarm system contacts specified under SECTION 260001-ELECTRICAL.

8. Threshold –aluminum mill finish meeting MAAB access requirements, width required by installation conditions.

2.06 PREFINISHED ALUMINUM SILLS, INFILL PANELS & TRIM

A. Prefinished window sills shall be .090 inches thick, fabricated in the profiles shown on the drawings. Provide end caps where sills project from the face of the adjacent cladding. End caps shall be .090 inches thick. End caps shall be factory (AC-TIG) welded and ground smooth before finishing; mechanically fastened and sealant at seams such that seams are tight and rivets are not visible in installed condition; or brake formed from sill sheet with top seam folded and side and bottom seams sealed. All sills shall be fabricated in the same manner per the approved shop drawings.

B. Prefinished closure panels and insulated aluminum infill panels at curtainwall:

1. Where panels are glazed into the curtainwall glazing pocket, the outward face shall be pre-finished .125 inch aluminum with 2” rigid insulation core sandwiched between outward face and minimum 20 gauge inner aluminum closure sheet.

2. Where panels are mechanically fastened to curtainwall frames, closure panel shall be minimum .125 inch prefinished aluminum . All exposed fasteners shall be countersunk and shall match panel finish. Install semi-rigid insulation behind closure panels where shown on the drawings.

C. Panning and extended subframe trim shall be extruded with caulkstops in profiles shown on the drawings.

D Flashings and miscellaneous trim – factory formed from 3003H-14 solid aluminum sheets to profiles indicated on the Drawings.

1. Gauges of flashings and miscellaneous trim shall be .050 inch thick unless otherwise noted. Running trim shall be supplied in minimum 10 foot lengths.

2. Concealed receiver strips, cleats, clip strips, and similar items. shall be factory formed from aluminum in gauges recommended by the manufacturer. Fasteners shall be non-corrosive. Fasteners shall be concealed unless otherwise shown on the Drawings. Exposed fasteners shall match panel color and shall be of type approved by the Architect.

3. Min. 20 gauge aluminum sheet metal back pan at concealed locations as shown on the Drawings.

E. Finish and Color of all sills, panels & trim – shall be as specified under paragraph 2.02,B.9.

2.07 GLASS PANELS

A. General – Glass shall be of domestic manufacture conforming to the ASTM C-1036 (latest edition), Standard Specification for Flat Glass, and ASTM C-1048 (latest edition), Heat Treated Flat Glass as manufactured by Pittsburgh Plate Glass Company (PPG), Libbey-Owens-Ford Company (LOF), American Saint-Gobain Corporation (ASG), Viracon, Guardian Industries or an approved equal. All glass shall be factory fabricated, labeled on each panel stating the strength, type, thickness, and quality. Labels shall remain on glass until final cleaning. Refer to the Drawings for locations of glass types and thicknesses.

1. All glass supplied under this SECTION shall be by the same manufacturer.

2. All spandrel glass supplied under this SECTION shall be by the same manufacturer.

B. Types

1. **Type 1** (Float Glass) – ¼ inch thick, clear, glazing quality float glass as manufactured by PPG, LOF, ASG, or an approved equal to be used at interior applications only.

2. **Type 2** (Laminated Safety Glass) to be used at interior applications only – ¼ inch thick, laminated safety glass, comprised of two layers 1/8 inch clear glazing quality float glass with .060 in PVB. laminating interlayer. Glass shall be as manufactured by PPG Herculite, LOF Tuf-Flex, ASG Tru-Temp, or an approved equal.

3. **Type 3** (Insulated "Low-E" Glass) – One-inch thick units comprised of ¼-inch thick clear float glass inner and outer lights separated by metal or organic spacers, double hermetically sealed with No. 3 surface receiving 'soft' Low- E coating with 90% Argon, 10% air between lights, or an approved equal as follows:

a. North and East elevations: Solarban 60, having 70% visible light transmittance, ASHRAE winter/summer U-value of .25/.22, shading coefficient of .43, solar heat gain coefficient of .37 and light to solar gain ratio of 1.88.

b. South and West elevations: Solarban 70XL, having 64% visible light transmittance, ASHRAE winter/summer U-value of .24/.21, shading coefficient of .31, solar heat gain coefficient of .27 and light to solar gain ratio of 2.37.

4. **Type 4** (Insulated "Low-E" Tempered Glass) – One-inch thick units, comprised of ¼-inch thick clear tempered safety glass outer light, ¼-inch thick clear tempered safety glass inner light, separated by metal or organic spacers, and double hermetically sealed with No. 3 surface receiving soft "Low-E" coating with 90% Argon, 10% air between lights or an approved equal. Units shall comply with SIGMA Class A.

   a. Large Lights – Where dimensions exceed those recommended by glass manufacturer for ¼- inch thick glass, one-inch thick insulated units shall be comprised of 3/8 inch clear tempered inner and outer lights.

   b. Provide Solarban 60 at north and east elevations and Solarban 70XL at south and west elevations per Article 2.07.B.(3).

5. **Type 5** (Insulated Spandrel Glass) – One-inch thick units comprised of ¼ inch strengthened glass having a solid color ceramic frit bonded to the inner surface (No. 2) of ¼ inch clear strengthened glass, separated by metal or organic spaces, and hermetically sealed with No. 3 surface receiving soft "Low-E" coating (Solarban 70XL) with 90% Argon, 10% air between lights or an approved equal. Units shall comply with SIGMA Class A.

6. **Type 6** – Not Used.

7. **Type 7** – Not Used.

8. **Type 8** – Not Used.

9. **Type 9** (Tempered Insulated Translucent "Low-E" Glass) – Where shown on the Drawings, light diffusing and insulating glass, one inch thick overall.

   a. To establish a level of quality, function and design, the Specifications and Drawings are based on Okalux by Schott. Similar products by Advanced Glazings or others will be considered for approval by the Architect upon receipt of adequate supporting data and samples.

b. Okalux light diffusing and insulating glass with Low-E coatings (hard coat on #4 surface) as required for the specified performance. Units shall be comprised of insulating glass units which incorporate a capillary slab fiber optic tube structure within the insulating glass cavity, and having the following thermal and light transmittance characteristics:

1) Direct light transmittance: minimum 50%

2) Diffuse light transmittance: minimum 40%

3) Visible light transmittance (VLT): minimum 50% (or 1.25 times SHGC)

4) Solar Heat Gain Coefficient (SHGC): 40% maximum

5) U-Valve (C.O.G.): 36 or less

6) VLT/SHGC Ratio: 1.25 minimum

c. Solera glass-based light diffusing units by Advanced Glazings, Limited comprised of insulating glass units which incorporate translucent veils attached to both glass surfaces or other equal meeting the same performance characteristics listed in above paragraph b.

10. **Type 10** (Insulated Tempered High Reflectivity (Mirror) Low-E Glass) – One-inch thick units comprised of ¼-inch thick clear tempered safety glass outer lite, ¼-inch thick clear tempered safety glass inner lite, separated by metal or organic spacers and double hermetically sealed, with reflective Low-E coating on the No. 2 surface and 90% Argon, 10% air between lights, or an approved equal. Units shall comply with SIGMA Class A.

a. High Reflectivity (Mirror) Low-E coating, all orientations: Solar Ban R100, having 42% visible light transmittance; winter U-value of .25; solar heat gain coefficient of .23; light to solar gain ratio of 1.83 and exterior reflectance of 32%; or equal.

11. **Type 11** (Tempered, Insulated, Optic Core, Light Diffusing, Low-E Glass) – Where shown on the Drawings, light insulating, light diffusing one inch units with an optic core that permits clear vision from the interior at eye height and limits direct sunlight and glare.

a. To establish a level of quality, function and design, the Specifications and Drawings are based on Clearshade by Panelite. Similar products such as Kapilux by Okalux or others will be considered for approval by the Architect upon receipt of adequate supporting data and samples.

b. Units shall be comprised of insulating glass units with low-E coating on #3 surface which incorporate plastic honeycomb, transparent fibers, or fixed thin louvers to control solar gain, minimize glare and permit clear vision through the glazing unit within the insulating glass cavity. Core shall be equal to Clearshade "random mix" TTWR3 and have the following thermal and light transmittance characteristics:

1) **Total Direct Light** (0 angle) = 69.9% per LBNL WINDOW 7.6

2) **Total Diffuse Light** (0 angle) = 70% per ASRAE Standard 74-1998: Method for Measuring Solar-Optical Properties of Materials.

3) **VLT** = 69.9% – 8% variable based upon sun angle.

4) **SHGC** = 59% – 8% variable based upon sun angle

5) **U-Value** = 0.33

6) **VLT/SHGC** = 7.37 (10^{o} angle VLT / 80^{o} angle SHGC)

12. **Type 12** (1/2" Clear Laminated Glass) – At acoustic assemblies as indicated on the drawings. ½ inch thick, laminated (two sheets 1/4" with laminating interlayer), clear, glazing quality float glass as manufactured by PPG, LOF, ASG or an approved equal to be used at interior applications where acoustic separation is required as indicated on the drawings.

13. **Type 13** (Insulated Laminated Acoustic Glass) – One inch thick unit comprised of 1/4" thick (two sheets 1/8" with laminating interlayer) laminated glass at both lites, separated by metal or organic spacers and hermetically sealed. Units shall comply with Sigma Glass A. To be used at interior locations where a high level of acoustic separation is required as indicated on the drawings.

2.08 GLAZING MATERIALS AND ACCESSORIES

A. Hybrid Butyl Tape – Preformed, reinforced, self-adhering Hybrid butyl, containing 100 percent solids, black in color. Tape shall be 440 by Tremco, GT-304 by CRL Co., MB-10A by GSSI Sealants or an approved equal. Tape shall be 3/8-inch wide by 3/16-inch minimum thickness, depending on glass thickness. Refer to FGJA Manual, latest edition, for determination of actual clearance required between glass and receiving members.

B. Glazing Sealant – Tremco Spectrum 2 or approved equal, a one-part silicone confirming to:

1. TT-S-00230C (COM-NBS), Type II, Class A

2. Class A TTS-001543A (COM-NBS), Class A

3. ASTM C 920-79, Type S, Grade NS, Class 25, Use NT, M, G, A and O.

4. SCAQMD, Rule 1168 for low VOC sealants.

C. Setting Blocks and Wedges – Made from resilient materials such as Neoprene with 70-90 durometer hardness for setting blocks and 40-50 durometer for wedges.

D. Foam Glazing Tape – Norseal V786 by Saint Gobain, Series V800 by Gaska Tape, ARclad 2000 Series by Adhesive Research or an approved equal. Tape shall be pressure sensitive one side closed cell vinyl foam, 1 ½ inches wide (min) x 3/16 inches thick.

E. Neoprene Wedge Gasket – Precision extruded neoprene "Poly-Wej" gasket as manufactured by Tremco or an approved equal.

F. Glazing Gaskets – Resilient EPDM elastomeric extrusions of 70 +/-5 Durometer, of the profiles recommended by the aluminum curtainwall and entrance framing system manufacturer for dry/pressure glazing.

2.09 PANNING, SUBSILL, MUNTINS, MULLIONS SYSTEMS

A. Subframe – Subframe shall be extruded to match the shapes and profiles shown on the architectural drawings. Subframe extensions shall be an integral part of the subframe extrusion. Subframes shall be factory tooled at head to jamb and jamb to sill connections. Field fabrication of subframe joints shall not be acceptable. Sub sills shall be end dammed. End dams shall be 6 inches tall 0.0625 aluminum and shall be mechanically fastened and sealed to sill. NOTE: Custom dies or customization of existing products and accessories may be required to satisfy the performance of aesthetic requirements of this project. No product or accessory shown on the Drawings or described herein is the exclusive property of any particular Manufacturer.

B. Mullions- Horizontal transition mullions shall be extruded to match the depth and sightlines indicated on drawings. Horizontal transition mullions shall be thermally broken with reinforced nylon struts, and shall be flush and in the same plane as the window system. Vertical mullions at curtainwalls shall be designed to, both, wind load and accept the attachment of sunshades. If sunshades are not provided by the metal window manufacturer, the metal window manufacturer must provide engineering data that verifies that the window system shall support the sunshades in response to the specified wind and snow loads.

C. Anchors

1. Provide concealed anchors of a type recommended by the window manufacturer for the specific type of construction. Anchors and fasteners shall be compatible with the window and the adjoining construction and in accordance with manufacturers recommended spacing and location.

2.10 SEALANT AT PERIMETER JOINTS

A. Materials

1. Sealant at perimeter joints at window, curtainwall and storefront systems and adjacent materials shall be 790 Ultra-low Modulus Silicone Building Sealant by Dow Chemical, 890 NST Silicone Sealant by Pecora, Spectrem 1 Silicone Sealant by Tremco or an approved equal, meeting the following minimum requirements:

   a. TT-S-001543A (COM-NBS) Class A.

   b. TT-S-00230C (COM-NBS) Class A.

   c. ASTM C-920 Type S, Grade NS, Class 50, USE T, NT, M, G, A, O.

   d. SCAQMD, Rule 1168, for low VOC sealants.

2. Primer shall be of a type as recommended by the manufacturer of the sealant. Primers shall be non-staining.

3. Backer Rod – Closed-cell polyethylene foam rod or closed-cell polyurethane foam rod, 1/3 greater in diameter than joint width. Backer rod shall be Tremco Backing, Sonolastic by BASF, HBR by Nomaco or an approved equal.z

B. Materials (Caulking)

1. Caulking Material – Pecora Acrylic Latex Caulk AC-20, Tremco Tremflex 834, Bostik Findley Chem-Calk 600, or an approved equal, in color as selected by the Architect.

2. Primer – Of a type as recommended by the manufacturer of caulking material and shall be non-staining.

3. Joint Beads – As specified herein for sealant materials.

2.11 INTERNAL SEALANT AT WINDOW, CURTAINWALL AND STOREFRONT SYSTEMS AND AIR AND VAPOR BARRIER

A. Sealant: Provide internal transition sealant between window, curtainwall and storefront systems and air and vapor barrier membrane consisting of extruded low-modulus silicone sheet and silicone sealant designed to adhere to polyethylene side of air and vapor barrier membrane and adjacent material. Provide the following materials as acceptable to the manufacturer of the air barrier membrane.

1. Cleaning Agent: Toluene.

2. Silicone Sealant: Low modulus single component silicone sealant compatible with polyethylene side of air and vapor barrier membrane (furnished and installed under SECTION 071326-AIR AND VAPOR BARRIERS.

3. Sealant shall be 790 Silicone Building Sealant as manufactured by Dow Coring, 890 NST Silicone Sealant as manufactured by Pecora, Spectrem 1 Silicone Sealant as manufactured by Tremco or an approved equal meeting the low VOC requirements of SCAQMD, Rule 1168.

B. Transition Membrane: To provide an air barrier between the membrane and adjacent materials (window, curtainwall and storefront systems), provide transition materials consisting of custom formed aluminum sheet, extruded low-modulus silicone sheet and silicone sealant designed to adhere to polyethylene side of membrane and adjacent material. Provide the following materials as acceptable to the manufacturer of the air barrier membrane.

1. Cleaning Agent: Toluene.

2. Silicone Sheet: SIL-SPAN Preformed Silicone Profiles by Pecora or ULTRASPAN Weatherstripping by General Electric. Provide preformed corners.3. Silicone sealant: Low modulus single component silicone sealant compatible with sealants furnished and installed under 2.14.A.

4. Formed aluminum sheet for inserting in curtainwall glazing channel as shown on the drawing.

2.12 SAFETY AND SECURITY GLAZING FILM

A. Manufacturers: To establish a standard of quality, design and function, specifications are based on Ultra S800 Safety and Security Film by 3M. Similar film manufactured by Lumar, GLOBAL, Madico or others will be considered for approval as an equal by the Architect upon receiving adequate supporting data and samples.

B. Optically clear, micro-layered tear resistant film, nominal thickness 8 mil applied to interior surface of glass lights to hold the glass in the window frame in the event of a forced entry attempt.

C. Physical Properties:

Tear Resistance – 1,200 lbs. %
Tensile Strength – 28,000 PSI
Break Strength – 224 lbs./in.
Elongation at break – 130%
Peel Resistance – >8 lbs./in.
Abrasion Resistance – <5%

2.13 NOT USED

2.14 UV PROTECTION FILM

A. Manufacture: To establish a standard of quality, design and function, Specifications are based upon 3M “Prestige Sun Control”. Similar film manufactured by ContraVision, Gila or others will be considered by the Architect for approval upon receipt of adequate supporting data and samples.

B. Characteristics: Optical clear

2.15 INTERIOR SECURITY TRANSACTION WINDOW

A. Manufacture: To establish a level of quality, design and function, interior transaction window is based on AVT Bullet Resistant Transaction Window by Insulgard Security Products. Similar transaction windows by InterBack Equipment, TBS, or other manufacturers will be considered by the Architect as an equal upon submission of adequate supporting data.

B. Features:

1. Extruded aluminum rails with natural voice transmission system utilizing holes at the sides of rails.
2. UL Listed Level 3
3. Stainless steel deal tray to be recessed in countertop.

C. Size: Custom size as shown on the Drawings. Up to a maximum of 36 in. wide x 68 in. high.

2.16 ALUMINUM SLIDING DOOR SYSTEM

A. To establish a standard of quality, design and function, manufacture has been based on Facade 2820 Series Custom Architectural Sliding Mall Front by Arcadia, Inc., Vernon, CA. Similar sliding doors by Sliding Door Company, NY, NY, La Cantina Doors, Oceanside, CA or others will be considered for approval by the Architect upon receipt of adequate supporting data and samples.

B. Sliding Door Framing:

1. Members shall be 1-3/4 inch deep, with face dimensions as follows:
   a. Vertical stile: 5 inch
   b. Top rail: 6 11/16 inch
   c. Bottom rail: 6 11/16 inch
   d. Mid rail: 4-1/2 inch
2. Major portions of the door stiles shall be a nominal .125 inch and glass stops shall be .050 inch thick.

C. Materials and Accessories

1. Door members: Extruded 6063-T6 aluminum alloy (ASTM B221 – Alloy G.S. 10aT5).
2. Screws, fastening devices, and internal components: Aluminum, stainless steel, or zinc plated steel in accordance with ASTM A-164 shall be aluminum or steel, providing the steel is properly isolated from aluminum.
3. Glazing Gasket: compression-type design.

D. Hardware

1. Hardware for Sliding Mall Front shall be furnished and installed by the manufacturer and shall include the following standard hardware:
   a. Weatherstripping: A hard-backed polypile weatherstrip shall be installed in frame and interlockers and meeting stiles of bi-parting doors. Sliding panel supplied with double sweep at sill.
   b. Sill track: stainless steel cap.
   c. Tandem ballbearing caster.
   d. Adams Rite maximum security lock. (2) Flush Bolt 1870 Series.
   e. Cylinders (interior and exterior).
   f. Flush face pull at each door.

E. Door Fabrication

1. Stiles and rails shall be tubular sections accurately joined, flush and hairline at corners with heavy concealed reinforcement brackets secured with machine bolts, with optional MIG weld. Exposed screws not permitted.
2. Prepare internal reinforcement for hardware.
3. Custom hardware templates and physical hardware must be submitted prior to any fabrication.

F. Finish as specified under paragraph 2.02, B 9. Color shall be selected from the manufacturer's full range of colors.

PART 3 EXECUTION

3.01 ERECTION

A. Install all items furnished hereunder in strict accordance with the approved shop drawings and manufacturer's specific recommendation, coordinating the installation with the project conditions.

B. Carefully check all receiving openings and where necessary request the General Contractor to correct any conditions which may be detrimental to proper installation and performance of the windows and doors. Commencement of installation work shall be construed as acceptance of the openings by the Metal Window Subcontractor.

C. Provide and install all of the required anchors, clips, reinforcing members, screws, nuts and bolts and anchorage materials to provide a proper installation.

D. Fill window frames and panning trim with insulation.

E. Plumb and align window faces in a single plane for each wall plane. Erect square and true. Anchor to maintain position when subjected to normal thermal and building movement, seismic forces and specified wind loads. Apply internal sealants and primary weather seal to provide watertight installation. Internal soft joints shall be provided in all exterior window systems and curtainwall systems with vertical slip connections to the supporting structure. Not applicable at windows supported by cold formed metal framing.

F. Check all installation anchorage items, and ensure that all such times have been properly set, firmly anchored to adjacent construction, and without unnecessary projections beyond frame, door, or hardware surfaces.

G. Upon completion of erection work clean all aluminum surfaces free from finger marks, dirt, and other foreign matter, using cleaning procedures recommended by the materials manufacturer.

H. Adequately anchor sunshades to maintain positions permanently when subjected to normal thermal movement, specified building movement, and specified wind, snow and dead loads.

3.02 INSTALLATION – ALUMINUM TRIM

A. Do not proceed with work until substrate construction is completed. Inspect substrate and verify substrate complies with allowable tolerances and shop drawing layout. Cooperate following with trades responsible for installation of adjacent construction.

B. Comply with SMACNA requirements unless otherwise indicated by the Contract Documents. In case of conflict, most stringent standards shall govern.

C. Install prefinished trim items and sealant materials in accordance with the approved shop drawings and the manufacturer's written instructions.

1. Clip strips, cleats, and other similar items shall be continuous along length of preformed cladding.

2. Fasteners shall be concealed. No exposed fasteners will be accepted in the finished work. Do not use face nailing on exposed surfaces. Space fasteners per manufacturer's recommendations.

3. Hem exposed edges 1/2 inch.

4. Butt ends of running trim, keeping a 1/8 inch gap at ends (1/4 inch at lengths of 10 feet). Install 6 inch minimum splice plate behind joint, with full sealant bed at each side of joint.

D. Protect factory finish from damage during installation. Field touch-up marred finish and field cuts to match factory finish.

3.03 GLAZING

A. General

1. All glazing labor shall be performed in accordance with the standards of the FGJA Glazing Manual, latest edition, and materials manufacturer's recommendations. Unless specifically expected hereinafter, all general conditions shall apply. Refer to drawings for details of installation.

2. Glass clearance dimension shall be based on the type and thickness of the glass as determined by the FGJA Glazing Manual and as hereinafter specified.

3. Surfaces shall be dry and free from dust, or other foreign materials before glazing. Clean all surfaces with cloth saturated with mineral spirits of high-flash naptha as recommended by glazing sealant manufacturer, before glazing. All glass shall be set with the wave parallel to the sill, without springing and proper clearance at all edges.

4. Maintain centered position of glass with setting blocks at sill, and shims or splicers on all four sides wherever glass dimensions are larger than 50 unit inches unless otherwise specified herein.

5. Check all openings, prior to glazing, to make certain that the opening is square, plumb, and secure in order that uniform face and edge clearances are maintained. Inspect all butt and miter joints and remove all projections from fixed rabbets.

6. All glass shall be factory installed to the greatest extent possible.

B. Installing Glass in Interior Glazed Aluminum Windows Where Aluminum Snap-On Glazing Beads Are Provided (Wet System)

1. After surfaces receiving the butyl glazing tape are cleaned and wiped dry, apply pre-shimmed butyl tape to fixed rabbet leg, setting tape 1/8 inch below the top of the rabbet leg. Tape is butted together, paper backing is removed, and butted corners dabbed with sealant to assure a positive seal.

2. Apply a continuous toe bead along the bottom edge of the glazing tape. Place setting blocks at quarter points. Position the lite of glass and firmly press to make contact with tape. Install glazing stops and neoprene gasket.

3. Install a gun applied cap bead of silicone sealant above the glazing tape, between the exterior glass face and the rabbet leg. Tool excess sealant to a slight angle.

C. Installing glass in aluminum framing system where extruded aluminum pressure plates and covers are provided (Dry/Pressure System).

1. Install glass and setting blocks, and glazing gaskets, extruded pressure plates and covers as per the written instructions of both the aluminum framing system manufacturer and insulated glass manufacturer.

3.04 INSTALLATION OF SILICONE SEALANTS AND LATEX CAULKING MATERIALS

A. Thoroughly clean all joints, removing all loose mortar, oil, grease, dust, frost, and other foreign materials which will prevent proper adhesion. Apply masking tape to each exposed surface of joints. Rake out joints to properly receive new sealant.

B. After cleaning, and if so recommended by the materials manufacturer, apply primer to all joint surfaces, taking care not to stain adjacent surfaces.

C. Install joint bead back-up in all joints in excess of 5/8 inch depth (from face of wall to edge of compressible joint filler), and joints which have no back-up therein, placing the joint bead in the joint in a manner which shall assure a constant depth 1/8 inch greater than the sealant and caulking material depth tolerances specified hereunder. Set beads into joints continuously, by slightly stretching during placement, to permit compression against sides of joint, without surface wrinkles or buckles.

D. Apply sealant material in joint using a hand caulking gun or power gun with a gun nozzle of proper size and sufficient pressure to completely fill joints. The depth of sealant materials shall be in accordance with the recommendations of the materials manufacturer for the specific joint function but in no case shall exceed 5/8-inch depth, not be less than 1/4 inch, regardless of the width of the joints; and outer edge of sealant material shall be kept back 1/8 inch from face of wall. Tool with a dry or water-wet tool only. Do not use detergents or soapy water for tooling operations. Joints shall be given a slight concave surface. Remove masking tape immediately after tooling and/or before sealant and caulking material has taken initial set.

E. Do not apply materials when temperatures are below 40 degrees F. without prior approval of the Architect.

F. Primer, if used, shall be maintained within the joint area and not allowed to overlap any adjacent surface.

3.05 SECURITY GLAZING FILM

A. At exterior windows and curtainwall where any part of the glass pane is ≤ 4 ft. above finished grade, entire pane shall be protected with security glazing film. Apply film to innermost surface of all such exterior windowpanes. Film shall be applied in accordance with the security film manufacturer's requirements.

3.06 UV FILM

A. Apply film to innermost surface of all lites of curtainwall adjacent to feature wall display installation in the lobby as shown on the drawings.

3.07 CLEANING

A. Upon completion of the glazing installation, remove all protective covering and thoroughly clean all glass and aluminum surfaces free from dirt and erection marks.

END OF SECTION

SECTION 080002

GLASS AND GLAZING

*(Filed Sub-Bid Required)

PART 1 GENERAL

1.00 TIME, MANNER AND REQUIREMENTS FOR SUBMITTING SUB-BIDS

A. Sub-bids shall be submitted in accordance with provisions of the General Laws (Ter. Ed.), Chapter 149, Section 44A to 44L, inclusive, as amended. The time and place for submission to Sub-Bids shall be set forth under INSTRUCTIONS TO BIDDERS.

B. Each Sub-Bid filed with the Awarding Authority must be accompanied by BID BOND, or CERTIFIED CHECK, or a TREASURER'S CHECK or CASHIER'S CHECK issued by a responsible bank or trust company, payable to the **City of Amesbury** in the amount stipulated in the INSTRUCTIONS TO BIDDERS. A Sub-Bid accompanied by any other form of bid deposit than those specified will be rejected.

C. Each Sub-Bid submitted for the work, under this SECTION, shall be on a form furnished by the Awarding Authority, and required by SECTION 44F of Chapter 149 of the General Laws, as amended.

D. Work to be performed under this SECTION is shown on Contract Drawings numbered:

G.0.01, G.0.02, G.0.04-G.0.08, inclusive; 3.4.01-3.9.15, inclusive; 4.1.01-5.2.07, inclusive; and 5.4.01-5.4.11, inclusive.

Remaining Contract Drawings are included for reference and coordination.

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a sub-bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish and install the following items required to complete the work of this SECTION, as shown on the Drawings and specified herein:

1. Glass and glazing panels for the following:
    a. Vision panels at wood and hollow metal doors.
    b. Fixed interior hollow metal sidelights, transoms, borrowed light frames ~~and interior hollow metal windows~~.

2. Foam glazing tape, glazing compound, extruded silicone gaskets and other related glazing accessories, except as otherwise specified hereunder.

3. Acoustical glass.

B. Install the following as furnished by the designated SECTIONS:

1. Metal glazing beads for pressed steel frames: SECTION 081113-HOLLOW METALWORK.

2. Glazing beads for wood doors: SECTION 081416-WOOD AND PLASTIC DOORS.

3. Glazing beads for partition transoms: SECTION 062000-FINISH CARPENTRY.

C. This Subcontractor shall furnish, install and maintain in safe and adequate condition all lifts, hoisting, staging and scaffolding that are necessary for the proper execution of the work of this SECTION.

D. LEEDv4-S Requirements:

1. The work of this section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEEDv4-S Certification at "Silver" Level is an Owner Requirement that is critical to secure project funding from the Massachusetts School Building Authority. LEEDv4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.

2. For all adhesives and sealants, meet the requirements for IEQ Credit 2, Low-Emitting Materials and as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

3. Meet the LEEDv4-S requirements for MR Credit 2, Building Product Disclosure and Optimization – Environmental Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers' product documentation for each product having an Environmental Product Declaration (EPD).

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be performed under the designated SECTIONS:

1. Standard sized framed mirrors: SECTION 102813-TOILET AND BATH ACCESSORIES.

2. Final cleaning of glass and aluminum after cleaning specified herein: SECTION 017700-PROJECT CLOSEOUT.

3. Glazing of aluminum windows, storefronts and pressure wall systems: SECTION 080001-METAL WINDOWS.

4. Glass display case doors and shelving: SECTION 062000-FINISH CARPENTRY.

5. Ornamental glass guard rail system at floor openings: SECTION 050001-MISCELLANEOUS AND ORNAMENTAL IRON.

6. Hollow metal doors and frames and wood doors, respectively: SECTION 081113-HOLLOW METALWORK and SECTION 081416-WOOD AND PLASTIC DOORS.

1.04 SUBMITTALS

A. Submit complete shop drawings in accordance with the requirements of SECTION 013300-SUBMITTALS.

B. Shop drawings shall show the various methods of glazing and a complete schedule of the locations of the various types of glass and thickness.

C. Include complete details of glazing accessories, sizes, and proposed methods of attachment.

D. LEED for Schools Submittals (Refer to SECTION 013300-SUBMITTALS):

1. Relevant supporting documentations required by LEED for Schools v4 and as detailed in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
2. A completed LEED MATERIALS REPORTING FORM, per SECTION 018113-SUSTAINABLE DESIGN REQUIREMENETS.
3. Product substitution requests are subject to additional LEED-S submittal requirements, see SECTION 012500-SUBSTITUTION PROCEDURES.

E. Submit the following samples in accordance with the requirements of the SECTION 013300-SUBMITTALS.

1. Each type of glass and mirror – 4 x 4 inches.
2. Glazing tape and gaskets – 4-inch length of specified types.
3. Setting blocks – two (2).

PART 2 PRODUCTS

2.00 LEEDv4-S REQUIREMENTS

A. Products and materials used for this section of the work are required to meet the following criteria for LEEDv4-S materials Credits, and a completed LEEDv4 MATERIALS REPORT FORM shall be submitted for all materials in this SECTION:

1. Furnish any adhesives and sealants such that they meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

2. Recycled Content. (See Section 018113 Sustainable Design Requirements for overall project recycled content requirements.) Contractor shall examine each product or material specification below for a stated minimum recycled content requirement, and if none is stated, the requirements under 018113 shall govern.

3. Regional Content. (See Section 018113 Sustainable Design Requirements for overall project regional content requirements.) Contractor shall examine each product or material specification below for a stated minimum regional content requirement, and if none is stated, the requirements under 018113 shall govern.

2.01 GLASS

A. General – Glass shall be of domestic manufacture, conforming to the ASTM C-1036-90, Standard Specification for Flat Glass, and ASTM C-1048-90, Heat Treated Flat Glass, as manufactured by Pittsburgh Plate Glass Company, Libbey-Owens-Ford Company, American Saint-Gobain Corporation or an approved equal. All glass shall be factory labeled on each panel stating the strength, type, thickness, and quality. Labels shall remain on glass until final cleaning. Refer to the Drawings for locations of glass types and thicknesses.

B. Types

1. Float Glass – ¼ inch, clear, glazing quality float glass, as manufactured by PPG, LOF, ASG or an approved equal.

2. Clear Laminated Safety Glass to be used at interior applications only – ¼ inch thick, laminated safety glass, comprised of two layers 1/8 inch clear glazing quality float glass with .060 in. PVB laminating interlayer. Glass shall be as manufactured by PPG Herculite, LOF Tuf-Flex, ASG Tru-Temp, or an approved equal.

3. 1 Hour Fire Rated Glass – To establish a level of quality, function and design, the Specifications and Drawings are based on TGP/Pinkington, Snoqualmie, WA (Pyrostop) laminated fire rated glass. Similar products by Safti-first, Brisbane, CA (Pyran Platinum L); Vetrotech, Corrbevoie, France or other manufacturers will be considered for approval by the Architect upon receipt of adequate supporting data and samples.

4. Acoustical Glass – ½" laminated clear acoustic glass comprised of two sheets of ¼" with laminated interlayer as manufactured by PPG, LOF, ASG or an approved equal.

5. Clear Laminated Glass – 3/8 inch.

2.02 GLAZING MATERIALS AND ACCESSORIES

A. Hybrid Butyl Tape – Preformed, reinforced, self-adhering Hybrid butyl, containing 100 percent solids, black in color. Tape shall be 440 Butyl Tape by Tremco, GT-304 Butyl Tape by CRL Co., MB-10A Butyl Tape by GSSI Sealants or approved equal. Tape shall be 3/8-inch wide by 3/16-inch minimum thickness, depending on glass thickness. Refer to FGJA Manual, latest edition, for determination of actual clearance required between glass and receiving members.

B. Glazing Sealant – Dow Corning 790, GE SilPruf LM SCS2700, Tremco Spectrum 1 or approved equal, a one-part silicone conforming to ASTM C 920 with a VOC content of 250g/L or less when calculated according to 40 CFR 59, Subpart D (EPA method 24).

1. Extruded silicone gaskets as manufactured by CCRL Laurence Co. Inc. or an approved equal may be used at interior butt glazing of transom glass.

C. Setting Blocks and Wedges – Made from resilient materials such as Neoprene with 70-90 durometer hardness for setting blocks and 40-50 durometer for wedges.

D. Foam Glazing Tape – Foam tape shall be Norseal V786 Foam Tape as manufactured by Saint-Gobain, Series V800 Tape by Gaska Tape, Inc., ARclad 2000 Series by Adhesive Research or an approved equal. Tape shall be pressure sensitive one side closed cell vinyl foam, 1 ½ inches wide (min.) by 3/16 inches thick.

PART 3 EXECUTION

3.01 ACCEPTANCE OF INSTALLATION CONDITIONS

A. Be fully responsible for the proper execution and performance of the work described herein. Inspect all installation conditions and request the General Contractor to have corrected any conditions which may affect work adversely.

3.02 DELIVERY AND STORAGE

A. Deliver materials when and store in a safe location as directed. Do not unpack material until it is to be set, unless unpacking is required for inspection by the Architect.

3.03 GLAZING

A. General

1. All glazing labor shall be performed in accordance with the standards of the FGJA Glazing Manual, latest edition, and materials manufacturer's recommendations. Unless specifically expected hereinafter, all general conditions shall apply. Refer to Drawings for details of installation.
2. Glass clearance dimension shall be based on the type and thickness of the glass as determined by the FGJA Glazing Manual and as hereinafter specified.
3. Surfaces shall be dry and free from dust, or other foreign materials before glazing. Clean all surfaces with cloth saturated with mineral spirits of high-glass naphtha as recommended by glazing sealant manufacturer, before glazing. All glass shall be set with the wave parallel to the sill, without springing and proper clearance at all edges.
4. Maintain centered position of glass with setting blocks at sill, and shims or splicers on all four sides wherever glass dimensions are larger than 50 unit inches unless otherwise specified herein.
5. Check all openings, prior to glazing, to make certain that the opening is square, plumb, and secure in order that uniform face and edge clearances are maintained. Inspect all butt and miter joints and remove all projections from fixed rabbets.

B. Glazing for all interior doors and interior frames.

1. Place setting blocks at quarter points, for glass installation only. Apply continuous strip of foam tape around perimeter of glass and plastic with adhesive side of tape toward glass or plastic. Tape shall be turned into each surface of the glass or plastic to form a channel around the entire perimeter. Set glass and plastic in place and attach the glazing beads with sufficient pressure against the tape to compress the tape approximately seventy (70) percent of its original thickness. After applying glazing beads, trim off excess tape with razor blade, or other sharp tool, level with sight line.

C. Polished Edges

1. All glass where edges are exposed shall have ground and polished edges. Locations include, but not limited to the sliding windows at the main office reception area.

3.04 CLEANING

A. Upon completion of the glazing installation, remove all protective covering and thoroughly clean all surfaces free from dirt and erection marks.

END OF SECTION

SECTION 081113

HOLLOW METALWORK

PART 1 GENERAL

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish the following items for installation under the designated SECTIONS:

1. Flush metal doors and pressed steel frames for doors, side lights, transoms borrowed light frames ~~and interior hollow metal window frames~~: SECTION 062000-FINISH CARPENTRY, for all locations.
2. Metal glazing beads for doors and frames: SECTION 080002-GLASS AND GLAZING.
3. Exterior thermal break hollow metal frames.
4. Internal reinforcing for required operations and applications.

B. Perform all cut-out work in doors and frames, and furnish and install all required reinforcing therein, from hardware templates provided under SECTION 087100-FINISH HARDWARE, and for intrusion alarm system magnetic contacts provided under SECTION 260001-ELECTRICAL.

C. LEEDv4-S Requirements:

1. The work of this section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEEDv4-S Certification at “Silver” Level is an Owner Requirement. LEEDv4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.
2. For all paints and coatings, meet the LEEDv4-S requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
3. Meet the LEEDv4-S requirements for MR Credit 2, Building Product Disclosure and Optimization – Environmental Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers’ product documentation for each product having an Environmental Product Declaration (EPD).

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be performed under the designated SECTIONS:

1. Grouting of hollow metal frames built into CMU walls - SECTION 040001 -MASONRY.
2. Wood doors: SECTION 081416-WOOD AND PLASTIC DOORS.
3. Finish painting for items furnished hereunder: SECTION 090007-PAINTING.
4. Furnish and install glass and install glazing beads furnished hereunder: SECTION 080002-GLASS AND GLAZING.
5. Building-in of frame anchors: By trade responsible for wall and partition erection.
6. Application of hardware and installation of magnetic door contacts: SECTION 062000-FINISH CARPENTRY.
7. Wiring of magnetic door contacts and other low voltage devices in frames: SECTION 260001- ELECTRICAL.

1.04 SUBMITTALS

A. Submit complete shop drawings in accordance with the requirements of SECTION 013300-SUBMITTALS.

B. Include a complete door, panel and frame schedule, large scale details of door, panel and frame construction, indicating all gauges, reinforcing, cut-outs, anchor clips, and anchors as well as certification from the manufacturer that all UL fire-resistive requirements for the required labels have been met. Indicate all seams and field joints on elevations and profile details.

C. Submit the following samples in accordance with the requirements of SECTION 013300-SUBMITTALS.

1. Corner section of typical welded steel frame, in specified thickness, showing reinforcing, welding and prime painting, all as specified hereunder.
2. Corner section of typical flush door construction, as specified hereunder.

D. LEED for Schools Submittals (Refer to SECTION 013300-SUBMITTALS):

1. Relevant supporting documentation required by LEED for Schools v4 and as detailed in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
2. A completed LEED MATERIALS REPORTING FORM, per SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
3. Product substitution requests are subject to additional LEED-S submittal requirements. See SECTION 012500-SUBSTITUTION PROCEDURES.

1.05 CERTIFICATION

A. The metal doors and frames manufacturer shall submit the following certificate, signed by an officer of the company with the schedule:

"I certify that all materials listed on the attached schedules, to be supplied for the NEW AMESBURY ELEMENTARY SCHOOL, AMESBURY, MA site comply with specifications in all respects."

1.06 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Packaging

1. Doors shall be fully wrapped in corrugated cardboard, single-faced paper 42 pound with a 26-pound liner medium "B" flute, protecting all surfaces of the door. Flute shall run the full height of the door.
2. Wood strips, 3/8 inch by 2 inches commercial grade, finished one side for marking, extending 1/2 inch beyond the top and bottom of the door shall be temporarily applied to the edges of the door.
3. The corrugated cardboard and wood strip shall be held firmly in place by three 3/8 inch by 0.18 steel bands on each door.
4. Wood strips shall be marked clearly giving door type, size, hand, lock preparation and mark number. The metal banding shall not interfere with the marking.

B. Storage and Protection

1. Properly store and protect this material. Should the priming coat be faulty or rust or scale appear, clean exposed surfaces to bright metal and apply a suitable approved priming coat applied before finish painting.

PART 2 PRODUCTS

2.00 LEEDv4-S REQUIREMENTS

A. Products and materials used for this section of the work are required to meet the following criteria for LEEDv4-S materials Credits, and a completed LEEDv4-S MATERIALS REPORTING FORM shall be submitted for all materials in this SECTION:

1. Furnish any paints and coatings such that they meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in Subparagraph 2.04 of SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

2.01 DOORS

A. General - Refer to the Drawings for various types of doors, including sizes and fire resistive label ratings.

B. Manufacture - To establish a standard of quality and design desired, specification shave been based on the use of doors manufactured by the Steelcraft Manufacturing Company, Superior Steel Company, or the Republic Steel Corporation. Similar doors of other manufacturers will be considered for approval as an equal, by the Architect, upon receipt of adequate supporting data, including samples if requested and a certificate of compliance as specified hereunder.

C. Door Construction - Full flush, beveled on hinge and lock edges, fabricated with vertical edge joints completely filled and ground smooth, and meeting the following additional requirements:

1. Faces – 18-gauge stretcher-leveled steel for interior doors (unless otherwise noted) and 16-gauge galvanized stretcher-leveled steel for exterior doors.
2. Core - Kraft honeycomb, (foamed-in-place polyurethane for all exterior doors) or continuous steel reinforcing spaced not more than six inches on center with sound deadening insulation, as standard with the specified manufacturers. Exterior polyurethane core doors shall be max. U-value of 0.09 when tested in accordance with ASTM C-1363.
3. Hardware reinforcement - hinges, 8 gauge, minimum; closers, 10 gauge, minimum; locks, 10 gauge, minimum; kick plates, 18 gauge, minimum; all other hardware, 10 gauge, minimum.
4. Top and bottom weather caps - Flush, 18 gauge, minimum, fully welded to exclude water.
5. Glazing beads - Steel or aluminum, as standard with the manufacturer, with edges flush with faces.
6. Galvanizing for exterior doors – **G90** hot-dipped galvanized as specified hereunder and in accordance with ASTM A653.

7. Galvanizing for designated interior doors as identified herein – As shown on the Drawings and **G90** hot-dipped galvanized as specified hereunder and in accordance with ASTM A653.

8. Treatment and priming - As specified hereunder.

9. Underwriter's Laboratories label doors - Provide all modifications to specified door construction required by Underwriters' Laboratories, Inc. and National Board of Fire Underwriters, to meet required fire-resistive rating, and equip each door with the appropriate UL label identification plate.

10. Recycled Content – Steel shall be produced using a minimum 20% recycled content.

2.02 METAL FRAMES

A. General - Refer to the Drawings for sizes and profiles of frames, related items, and locations of pressed steel frames. Provide welded frames for all locations.

1. Refer to the Drawings for frames and sidelights in fire resistive rated assemblies requiring a Factory Mutual (FM) label.

B. Materials - Frames, reinforcements, anchors, anchor clips, and related items shall be fabricated from prime quality cold-rolled steel (galvanized for all exterior frames and for interior frames so noted), and where so indicated, all of the following minimum gauges:

1. Interior frames – 16-gauge steel.

a. All interior frames at areas designated under paragraph 2.03,A – 16-gauge **G90** galvanized steel in accordance with ASTM A653.

2. Exterior thermal-break frames – 14-gauge galvanized steel, **G90** in accordance with ASTM A653, hot dipped with continuous, three sided, bonded, non-conductive compression type weatherstripping.

3. Reinforcing channels, where shown, and in heads of frames 36 inches wide and greater, except where UL label requirements prohibit same – 12-gauge steel for steel frames.

4. Hinge, lock and strike reinforcement - 3/16-inch thick steel for steel frames.

5. Door closer reinforcement – 12-gauge steel for steel frames.

6. Floor clips - 3/16-inch thick steel for steel frames.

7. Frame splines - Same thickness as frames.

8. Glazing beads for steel frames, where indicated – 16-gauge steel.

9. Recycled Content – Steel shall be produced using a minimum 20% recycled content.

C. Construction

1. Frames shall be mitered, fully welded and ground smooth. Exposed surfaces of welded joints shall be dressed to produce invisible connections. Weld construction joints for full depth and width, or weld equivalent spline plates on unexposed faces of the frames.
2. Reinforcements, stiffeners, and base angle clips shall be welded to inside surfaces of frames.
3. The finished work shall be strong and rigid, neat in appearance, and free from warp and buckle. Miters shall be well formed and in true alignment.
4. Locate hardware cut-outs and reinforcing from templates obtained from the hardware supplier. Weld sheet steel dust covers over all cut-outs in frames to prevent contact of mortar with reinforcing and lock strikes.
5. Turn edges of frames to form retainers for anchors, where applicable.
6. Punch three holes in stop of strike jamb of door frames for application of silencers.
7. Before shipping, provide removable angle spreaders securely fastened to bottom of each jamb; do not remove until frames are secured in place.
8. Frames, for UL label doors, shall be constructed in strict accordance with the requirements of Underwriters' Laboratories for the designated fire rating and shall bear the UL identification plate for same.
9. Frames in one and two-hour rated construction shall be constructed in accordance with and shall bear the UL identification plate for same.

D. Anchorage

1. Anchor clips for frames in metal stud partitions: 12-gauge steel (3/16-inch thick aluminum for aluminum frames) Zee shaped clips, 1-1/2 inch upturned and downturned legs, of the sizes indicated on the Drawings, shop-welded to frames, for field attachment to metal studs. Anchors for masonry partitions shall be adjustable strap-type.
2. Floor clips for frames - 2 x 2-3/16-inch angles, full width of frame, and provided with two (2) holes for power-driven (or expansion type) attachment to the concrete floors.
3. Spacing of anchors - Provide four (4) anchors, anchoring bolts, or anchor clips, per jamb. For frames greater than 7 feet 6 inches in height, provide five (5) anchors, anchoring bolts, or anchor clips per jamb. Anchors shall be located 12 inches below the head and spaced equivalent from that point to floor.

2.03 GALVANIZING AND SHOP PRIMING

A. All exterior doors, frames, anchors, reinforcing, designated interior frames, and other related items therefore, shall be fabricated from zinc-coated steel. This coating shall consist of zinc applied by a hot-dipped process on both side of all base metals and in accordance with ASTM A653.

B. Zinc shall be applied in such a manner as to provide a ductile coating that is tightly adherent to base metal and which shall conform to bend tests conducted in accordance with ASTM Specification A-525 and ASTM A653 for **G90** galvanizing Zinc coating shall be not less than .90 ounces total (both surfaces) per square foot of steel. Following fabrication of exterior frames, touch up all welds with liquid zinc (Galvicon, Z.R.C, or other approved equal method).

C. Clean all surfaces of hollow metal doors, panels, frames, anchors, and related items specified hereunder, by hot or cold phosphate treatment standard with the manufacturer. Clean and caustic-etch all aluminum items. Following cleaning, apply one coat of grey rust-inhibitive prime paint to both steel and aluminum work, and bake on. Prime all surfaces, including those which shall be inaccessible after erection.

D. Galvaneal mill finish is NOT an "approved equal" product for hot dipped galvanized steel. ***Any submittal of this product shall result in a summary rejection of the entire submittal.***

2.04 INTRUSION ALARM DOOR CONTACTS

A. Prepare doors and frames to receive magnetic contacts for intrusion alarm system, furnished under SECTION 260001-ELECTRICAL. Contacts shall be installed flush in doors and frames.

PART 3 EXECUTION

3.01 DOORS AND FRAMES

A. Installation shall be performed under SECTION 062000-FINISH CARPENTRY.

END OF SECTION

SECTION 081416

WOOD AND PLASTIC DOORS

PART 1 GENERAL

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish the following items for installation under the designated SECTIONS:

1. Flush **pre-finished** wood solid core doors including matching transoms at doors so scheduled: SECTION 062000-FINISH CARPENTRY.
2. Glazing beads, loosely attached to doors for removal and permanent installation: SECTION 080002-GLASS AND GLAZING.
3. Metal louvers (factory primed) for finish painting by SECTION 090007-PAINTING.

B. LEEDv4-S Requirements:

1. The work of this section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEEDv4-S Certification at “Silver” Level is an Owner Requirement that is critical to secure project funding from the Massachusetts School Building Authority. LEEDv4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.
2. For all adhesives, sealants, paints and coatings, meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
3. For all composite wood and agrifiber products, meet the LEED-S requirements for IEQ Credit 2, Low-Emitting Materials as defined in Section 018113-SUSTAINABLE DESIGN REQUIREMENTS.
4. Meet the LEEDv4-S requirements for MR Credit 2, Building Product Disclosure and Optimization – Environmental Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers’ product documentation for each product having an Environmental Product Declaration (EPD).

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be performed under the designated SECTIONS:

1. Furnishing of finish hardware: SECTION 087100-FINISH HARDWARE.
2. Pressed steel frames for doors: SECTION 08113-HOLLOW METALWORK.
3. Air movement requirements for undercuts and door louvers: SECTION 230001-HVAC.
4. Installation of doors and hardware: SECTION 062000-FINISH CARPENTRY.
5. Glass for door lites: SECTION 080002-GLASS AND GLAZING.
6. Wood phenolic panels: SECTION 074233-PHENOLIC RAINSCREEN SYSTEM.

1.04 SUBMITTALS

A. Submit complete shop drawings in accordance with SECTION 013300-SUBMITTALS.

B. Include a complete new wood door schedule and a certified statement from the manufacturer that the doors proposed to be furnished meet or exceed the requirements specified hereunder, together with a sample copy of the manufacturer's warranty which is specified herein.

C. Submit the following samples in accordance with the requirements of SECTION 013300-SUBMITTALS.

1. Corner section of each typical door, showing construction, methods of joinery and type of veneer.
2. Mounted pre-finished veneer samples, three each available type, 12-inch x 12-inch in size.
3. Mounted 24 inch x 24 inch, prefinished veneer sample of specified veneer in accordance with Article 2.01C.

D. LEED for Schools Submittals (Refer to SECTION 013300-SUBMITTALS):

1. Relevant supporting documentation required by LEED for Schools v4 and as detailed in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
2. A completed LEED MATERIALS REPORTING FORM, per SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
3. Product substitution requests are subject to additional LEED-S submittal requirements, see SECTION 012500-SUBSTITUTION PROCEDURES.

1.05 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Each door shall be carefully packed with non-staining moisture-proof covering and spacers, prior to shipping, in a manner which shall protect the doors against damage in transit.

B. The manufacturer shall convey to the General Contractor special on-site care and handling requirements.

1.06 GUARANTEE

A. The manufacturer shall submit directly to the General Contractor for transmittal to the Architect, two (2) copies of the manufacturer's full warranty covering all doors. Said warranty shall be signed by the manufacturer and shall be submitted at the same time doors are shipped. Warranty shall be as follows:

1. Flush doors for lifetime of installation, including rehanging and refinishing.

1.07 REFERENCE STANDARDS

A. ASTM E152 – Methods of fire tests of door assemblies.

B. AWI – Quality standards of the Architectural Woodwork Institute (Premium Grade).

C. NFPA 80 – Fire doors and windows.

D. NFPA 252 – Standard method of fire tests for the door assemblies.

E. UL 10C – Fire tests of door assemblies.

PART 2 PRODUCTS

2.00 LEEDv4-S REQUIREMENTS

A. Products and materials used for this section of the work are required to meet the following criteria for LEEDv4-S materials Credits, and a completed LEEDv4-S MATERIALS REPORTING FORM shall be submitted for all materials in this SECTION:

1. Recycled Content. (See Section 018113 Sustainable Design Requirements for overall project recycled content requirements.) General Contractor shall examine each product or material specification below for a stated minimum recycled content requirement, and if none is stated, the requirements under 018113 shall govern.

2. Regional Content. (See Section 018113 Sustainable Design Requirements for overall project regional content requirements.) General Contractor shall examine each product or material specification below for a stated minimum regional content requirement, and if none is stated, the requirements under 018113 shall govern.

3. Certified Wood (FSC). (See Section 018113 Sustainable Design Requirements for overall project FSC-Certified wood content requirements.) For the sum of all wood products in this section, a minimum of 50% FSC wood is required.

4. Furnish any composite wood and agrifiber products such that they meet the formaldehyde emissions requirements for CARB ATCM for ultra-low-emitting formaldehyde (ULEF) or no-added formaldehyde (NAF) resins. Laminating adhesives used to fabricate on site and shop applied composite wood and agrifiber assemblies must also meet this requirement. Refer to the requirements for IEQ Credit 2 as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

5. Furnish any paints and coatings applied on site and inside the air and vapor barrier, such that they meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in Section 018113-SUSTAINABLE DESIGN REQUIREMENTS.

2.01 WOOD FLUSH DOORS

A. Manufacture – To establish a standard of quality, design and function, specifications are based on wood flush doors manufactured by VT Industries, Holstein, IA. Doors by Marshfield Door Systems, Inc., Marshfield, WI; Eggers Industries, Neenah, WI; and Algoma Hardwoods, Algoma, WI. and by other manufacturers will be considered as an equal by the Architect upon receipt of adequate supporting data and samples.

B. General – Refer to the drawings for sizes of doors and for glazing cut-outs and louvers therein.

C. Veneers – Shall be AWI Premium Grade, Type 1, **rift cut, Red Oak.** Vertical exposed edge of stiles shall be of same species as door facing.

1. Field Painted Doors - Face material shall be medium density overlay.

D. Finish – **Factory finished doors** shall be in accordance with AWI Division 1500-S-4-Finish System Standards. Factory finish shall be ultraviolet (UV) cured polyurethane to comply with EPA Title 5 guidelines for Volatile Organic Compound (VOC) emissions limitations. Finish shall meet or exceed performance standards or TR-6 catalyzed polyurethane. Doors shall be furnished with a **stain and clear finish**.

1. Door stain shall be chosen by the Architect from manufacturer's full line of colors to approximate wood phenolic panels.

E. Lumber Core Doors (Unrated and 20 Minute Labels) – Institutional solid lumber core doors consisting of the following:

1. Core – Structural composite lumber material.
2. Stiles – (5/8-inch min.) and top and bottom rails (1-1/8-inch, min.) glued to core.
3. Cross Banding – 1/16 inch minimum, low density hardwood.
4. Veneers and cross banding bonded to core with Type I waterproof glue in a hot press, following sanding of core unit.
5. Factory machine doors for finish hardware in accordance with hardware templates and dimensions provided under SECTION 087100. Do not factory machine for surface hardware. Factory pre-fit doors to frame openings of hollow metal frames furnished under SECTION 081113-HOLLOW METALWORK.
6. Staved core doors so noted on the door schedule shall carry 20 minute UL Labels.
7. Security rating – Class 40, tested in accordance with ASTM F-476.
8. Products shall meet the LEED-S requirements for Certified Wood and Low Emitting Materials.
9. Acoustic Doors shall be equal to VT wood flush door with 'sound dampening core'. Door leafs designated "acoustic", shall be rated to STC-40 or greater. The leafs shall be installed in standard Hollow Metal frames (SECTION 081113-HOLLOW METALWORK) with gasketing hardware (SECTION 0871000-FINISH HARDWARE) and acoustic glass (SECTION 080002- GLASS AND GLAZING). The resulting opening assembly STC is not specified.

F. Mineral Core Doors (45, 60 and 90 minute labels) - Institutional, rated mineral core doors shall be fabricated in accordance with the manufacturer's UL requirements, including the following:

1. Stiles shall have a minimum screw withdrawal performance of 740 lbs.
2. Mineral core doors shall have inner blocking to attach surface applied hardware with screws. **Through bolts are not acceptable.**
3. Cross Banding – 1/16-inch minimum hardwood.
4. Veneers and cross banding to core with Type I waterproof glue, following sanding of core unit.
5. Factory machine doors for finish hardware in accordance with hardware templates and dimensions provided under SECTION 087100. Do not factory machine for surface hardware. Factory pre-fit doors to frame openings of the hollow metal frames furnished under SECTION 081113-HOLLOW METALWORK.
6. Doors shall carry Fire Rating labels as noted under door schedule.
7. Security rating – Class 30, tested in accordance with ASTM F-476.
8. Products shall meet the LEED-S requirements for Certified Wood and Low-Emitting Materials.
9. ~~Acoustic doors shall be sound rated to STC-40 or greater.~~

2.02 GLAZED OPENINGS

A. For all rated and non-rated doors – Flush wood or veneered beads similar to Marshfield Door Systems W-6 profile, species to match face veneer. Secure glazing beads to one side of the door at the factor for field glazing. Field applied glazing beads shall be factory pre-cut and secured inside light cutout of each door.

Special note on acoustic doors: Door beads and machining for lites in acoustic doors shall be sized to accept ½ in. monolithic glass.

2.03 WOOD LOUVERS

A. Where wood doors are scheduled to have louvers, wood louvers shall be factory finished and installed.

1. Louver blades and stops shall match species of door veneer.
2. Louver blades in operable doors shall be flat slat type.
3. Louvers shall have 50% free area.

PART 3 EXECUTION

3.01 DOORS

A. Installation shall be performed under SECTION 062000-FINISH CARPENTRY.

END OF SECTION

SECTION 087100

FINISH HARDWARE

PART 1 GENERAL

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish the following, for installation under the designated SECTIONS:

1. Finish hardware, for the types set forth in the schedule contained hereunder, SECTION 062000-FINISH CARPENTRY.
2. Templates for hardware cutouts and reinforcing in door and frames: To fabricator of such items.
3. Services of a qualified hardware consultant to prepare detailed schedules of hardware required for the project.
4. Miscellaneous hardware as indicated under Article 2.12.

B. LEEDv4-S Requirements (Refer to SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS):

1. The work of this section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEEDv4-S Certification at “Silver” Level is an Owner Requirement that is critical to secure project funding from Massachusetts School Building Authority. LEEDv4-S requirements for the work of this section are detailed herein, and additionally in DIVISION 1 of this Project Manual.
2. For all adhesives and sealants, meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
3. For all flooring systems, meet the requirements for IEQ Credit 2, Low-Emitting Materials as identified in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
4. For all paints and coatings, meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

5. Meet the LEEDv4-S requirements for MR Credit 4, Building Product Disclosure and Optimization – Health Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers' product documentation for each product having a Health Product Declaration (HPD).

6. Meet the LEEDv4-S requirements for MR Credit 2, Building Product Disclosure and Optimization – Environmental Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers' product documentation for each product having an Environmental Product Declaration (EPD).

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be performed under the designated SECTIONS:

1. Wood blocking at wall mounted door closers, door stops and other finish hardware items: SECTION 061000-ROUGH CARPENTRY.

2. Metal doors and frames: SECTION 081113-HOLLOW METALWORK.

3. Wood doors: SECTION 081416-WOOD AND PLASTIC DOORS.

4. Toilet room accessories; SECTION 102813-TOILET AND BATH ACCESSORIES.

5. Hardware for millwork: SECTION 062000-FINISH CARPENTRY.

6. Hardware for casework: SECTION 123533-CLASSROOM CASEWORK.

7. Threshold and weatherstripping for aluminum entrances, except as specified hereunder: SECTION 080001-METAL WINDOWS.

8. Hold-open devices and power for door hardware: SECTION 260001-ELECTRICAL.

9. Exterior door video/intercom control system: SECTION 27500-DISTRIBUTED COMMUNICATION SYSTEMS (PART OF SECTION 260001).

10. Exterior door access control system: SECTION 281000-INTEGRATED SECURITY SYSTEMS.

1.04 SUBMITTALS

A. Submit the following in accordance with SECTION 133000-SUBMITTALS:

1. Schedule: Submit to the Architect six (6) copies of the complete hardware schedule within fourteen (14) days after the receipt of the contract award. Submit therewith complete catalog cuts and descriptive data of all products specifically schedule therein. No materials shall be ordered or templates issued until the hardware schedule has been approved by the Architect. Form and detail of hardware schedule shall be in vertical format in conformance to the door and hardware industry standards. All hardware sets shall be clearly cross-referenced to the hardware set numbers listed in this specification.

2. Samples: If requested, submit to the Architect for approval a complete line of samples, as directed. Samples shall be plainly marked giving hardware number used in this Specification, the manufacturer's numbers, types and sizes. The Architect will deliver approved samples to the project site to be stored. Samples will remain with the Architect until delivery of all hardware to the project is complete, after which time they will be turned over to the General Contractor for incorporation into the work.

3. Keying System Submission: Before cylinders are ordered, submit a complete proposed keying system for approval.

1.05 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Delivery of hardware shall be made to the project by the Hardware Supplier in accordance with the instructions of the General Contractor.

B. The General Contractor shall provide adequate locked storage space with shelving for the hardware, shall be responsible for all items of hardware after receipt from the Supplier, and shall replace all hardware lost or damaged after delivery and receipt.

C. The General Contractor shall furnish the Hardware Supplier with receipts for all hardware and accessory items received and shall send copies of these receipts to the Architect, if requested.

1.06 REGULATORY REQUIREMENTS

A. Conform to all applicable codes. Provide all throws, projections, coatings, knurling, opening and closing forces, and other special functions required by State and Local Building Codes, and all applicable Handicap Code requirements.

B. For fire rated openings, provide hardware complying with NFPA 80 and NFPA 101 without exception. Provide only hardware tested and listed by UL for the type and size of door installed and fire resistance rating required.

1.07 QUALITY ASSURANCE

A. Hardware Supplier shall have in his employ one or more members of the Door and Hardware Institute to include at least one certified Architectural Hardware Consultant in good standing, which shall be responsible for preparation of the Finish Hardware Schedule. This Consultant shall be acceptable to the Architect and is to ensure that the intent requirement of this specification is fulfilled, and to certify that the work of this Section meets or exceeds the requirements specified in this Section and the requirements of authorities having jurisdiction.

B. Hardware Supplier shall warrant and guarantee, in writing, that hardware supplied is free of defective material and workmanship. Supplier shall further warrant and guarantee for a period of one year from Owner's Use and Occupancy that the hardware shall function in a satisfactory manner without binding, collapse, or dislodging of its parts, provided the installation is made to the manufacturer's recommendations.

C. The Hardware Supplier shall repair or remedy, without charge, any defect of workmanship or material for which he is responsible hereunder.

1.08 INTENT

A. The intent of the work of this Section is to provide hardware for every door in the project, except as indicated, so that each door functions correctly for its intended use. Provide only hardware that complies with applicable codes and requirements of authorities having jurisdiction including requirements for barrier-free accessibility.

1.09 SPECIAL REQUIREMENTS

A. Hardware Supplier shall determine conditions and materials of all doors and frames for proper application of hardware.

B. The Hardware Schedule shall list the actual product series numbers. Bidders are required to follow manufacturer's catalog requirement for the actual size of door closers, brackets and holders. All door opening sizes are as noted on the Door Schedule and all hardware shall be in strict accordance with requirements of height, width, and thickness.

PART 2 PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. To establish a standard of quality, design and function, manufacture has been based upon the following manufacturers.

B. Similar products will be considered for approval by the architect upon receipt of adequate supporting data and samples.

Hinges	McKinney	Scranton, PA
	Ives	Indianapolis, IN
	Stanley	Indianapolis, IN
Geared Hinges	Pemko	Memphis, TN
	McKinney	Scranton, PA
	ABH	Itasca, IL
Locksets	Sargent	New Haven, CT
	Schlage	Colorado Springs, CO
	Best	Indianapolis, IN
Exit Devices	Sargent	New Haven, CT
	Von Duprin	Indianapolis, IN
	Precision	Indianapolis, IN
Door Closers	Sargent	New Haven, CT
	LCN	Princeton, IL
	Norton	Charlotte, NC
Flush Bolts	Ives	Indianapolis, IN
	Trimco	Los Angeles, CA
	Rockwood	Rockwood, PA
Door Stops	Trimco	Los Angeles, CA
	Ives	Indianapolis, IN
	Rockwood	Rockwood, PA
Push/Pulls	Rockwood	Rockwood, PA
	Trimco	Los Angeles, CA
	Ives	Indianapolis, IN
Protective Plates	Rockwood	Rockwood, PA
	Trimco	Los Angeles, CA
	Ives	Indianapolis, IN
Thresholds/	NGP	Memphis, TN
Weatherstripping/	Pemko	Memphis, TN
Rain Drips	Reese	Rosemount, MN

Silencers	Ives	Indianapolis, IN
	Rockwood	Rockwood, PA
	Hager Companies	St Louis, MO

2.02 MATERIALS AND QUALITY

A. All hardware shall be of the best grade of solid metal entirely free from imperfections in manufacturer and finish.

B. Qualities, weights, and sizes given herein are the minimum that will be accepted. It is the responsibility of the Hardware Supplier to supply the specified size and weight of hardware and the proper function of hardware in each case and to provide UL approved hardware at all fire-rated doors.

C. Provide, as far as possible, locks of one lock manufacturer and hinges of one hinge manufacturer. Modifications to hardware that are necessary to conform to construction shown or specified shall be provided when required for the specified operation and functional features.

2.03 HARDWARE DESIGNATIONS

A. All items of hardware are referenced by manufacturer's names and numbers. The manufacturer's names and numbers are used to define the function, design, and quality of the material to be supplied. Substitution of products other than those listed shall be submitted to the Architect **prior to** the submission of the finish hardware schedule. The Architect shall be the sole judge of any proposed substitution.

2.04 TEMPLATES

A. Hardware supplier shall immediately, but not later than three (3) days after approval of his Schedule by the Architect, furnish the General Contractor with complete template information necessary for the fabrication of doors, frames, etc. No templates shall be furnished prior to the approval of the hardware schedule.

2.05 HARDWARE FOR LABELED FIRE DOORS, EXIT DEVICES AND SMOKE DOORS

A. Hardware shall conform to requirements of NFPA 80 for labeled fire doors and to NFPA 101 for exit doors, as well as to other requirements specified. Labeling and listing by UL Building Materials Directory, for class of door being used will be accepted as evidence of conformance to these requirements. Install minimum latch throw as specified on label of individual doors. Provide hardware listed by UL except where heavier materials, larger sizes, or better grades are specified herein under paragraph entitled "Hardware Sets". In lieu of UL labeling and listing, test reports from a nationally recognized testing agency may be submitted showing that hardware has been tested in accordance with UL test methods and that it conforms to NFPA requirements. Specific hardware requirements of door or frame manufacturers which exceed sizes or weights of hardware herein listed shall be provided with no additional charge.

2.06 KEYS AND KEYING

A. The hardware supplier shall review the specific hardware functions with the Architect and owner at the time of the keying review, to assure the appropriateness of each of the hardware functions. Failure to make this review does not relieve the hardware supplier from providing the proper functions.

B. Key System: Cylinders shall be Masterkeyed and/or Grandmasterkeyed to a new system as directed.

1. Master Keys, Grandmasterkeys: Furnish six (6) keys for each set, if required.
2. Cylinders for use at the aluminum doors, as well as the cylinders being used with the exit devices, are to be of the interchangeable core type. These cylinders are to be furnished complete with temporary removable construction cores for use by the contractor during the construction period. These construction cores are to be operated by the same construction key that is established for the balance of the locksets, cylinders. Furnish three (3) control keys each for the removal of the construction cores and the installation of the permanent cores.
3. Furnish three (3) change keys for each cylinder keyed differently: six (6) change keys for each set keyed alike, and in sets where only (2) cylinders are keyed alike, four (4) change keys will be required.
4. Keying is to be done at the factory to avoid duplication of the new cylinders.
5. Master Keys shall be sent to the owner by registered mail, return receipt required.
6. Supply a bitting list for all change keys and master keys to the owner.
7. Set lock cylinders to a Construction key for use by the Contractor during the construction period. Furnish ten (10) Construction keys and two (2) keys for voiding the Construction key feature

2.07 FASTENERS

A. Manufacture hardware to conform to published templates, generally prepared for machine screw installation.

B. Furnish screws for installation, with each hardware item. Provide Phillips flat-head screws except as otherwise indicated. Furnish exposed screws to match the hardware finish, or, if exposed in surfaces of other work, to match the finish of such other work as closely as possible, except as otherwise indicated.

C. Provide concealed fasteners for hardware units which are exposed when the door is closed, except to the extent no standard manufactured units of the type specified are available with concealed fasteners. Do not use thru-bolts unless specifically approved by the Architect.

D. All hardware shall be installed **only** with fasteners supplied by manufacturers of specific products.

2.08 PACKING AND MARKING

A. All hardware shall have the required screws, bolts and fastenings necessary for proper installation and shall be wrapped in the same package as the hardware item for which it is intended and shall match finish of hardware with which to be used.

B. Each package shall be clearly labeled indicating the portion of the work for which it is intended.

2.09 ENVIRONMENTAL CONCERN FOR PACKAGING

A. The hardware shipped to the jobsite is to be packaged in biodegradable packs such as paper or cardboard boxes and wrapping. If non-biodegradable packing such as plastic, plastic bags or large amounts of styrofoam is utilized, then the General Contractor will be responsible for the disposal of the non-biodegradable packing to a licensed or authorized collector for recycling of the non-biodegradable packing.

2.10 FINISH HARDWARE DESCRIPTION

A. Hardware items shall conform to respective specifications and standards and to requirements specified herein.

B. Materials and Finish: Materials and Finish shall be:

1. Interior Butts: US26D (BHMA 652)
2. Geared Hinges US28 (BHMA 628)
3. Door Closers: Sprayed to match hardware finish
4. Exit Devices: US26D (BHMA 626)
5. Kick, Push and Armor Plates, Door Pulls, Push/Pull Bars: US32D (BHMA 630)
6. All other hardware shall be: US26D (BHMA 626), or as scheduled

C. Hinges and Pivots:

1. Number of hinges or pivots per door: two hinges or pivots are intended to be provided for doors up to and including five feet in height, and an additional hinge for each two-and-one-half feet or fraction thereof, of the height of the door.

2. All hinges on exterior doors shall be full-mortise Continuous Geared Hinges. Geared Hinges shall be manufactured of extruded 6063-T6 aluminum alloy temper. Hinges shall consist of three interlocking extrusions in a pinless assembly applied to the full height of the door and frame. All hinges shall be manufactured non-handed. Door leaf and jamb leaf shall be geared together for the entire length of the hinge and joined by a cover channel. All Geared Hinges shall be heavy duty (HD).

3. Geared Hinges shall be Pemko, McKinney or ABH as follows:

At 1 ¾" doors	
Pemko	CFM SLFHD Series
McKinneyMCK	12HD
ABH	A110HD

At 2" doors	
Pemko	CFM_SLI
McKinney	MCK-14HD
ABH	A260HD

4. Hinges on interior doors shall be steel and sized as follows, unless otherwise specified in the hardware sets below:

Door Thickness	Door width	Hinge Weight	Hinge
1-3/4"	40" and under	Regular	4-1/2"
1-3/4"	Over 40"	Extra heavy	5 x 4-1/2"

Width of hinge shall be determined by trim conditions

5. All bearing hinges shall have flush bearings and button tips.

6. Hinges shall be McKinney, Ives or Stanley as follows:

McKinney	Ives	Stanley
TA714	3CB1	CB1900R
TA786	3CB1HW	CB1901R

D. Door Closers:

1. Door closers shall have fully hydraulic, full rack and pinion action. Cylinder body shall be 1-1/2" in diameter, and double heat-treated pinion shall be 11/16 inches in diameter.

2. Hydraulic fluid shall be of a type requiring no seasonal closer adjustment for temperatures ranging from 120 degrees F to -30 degrees F.

3. Spring power shall be continuously adjustable over the full range of closer sizes and allow for reduced opening force for the physically handicapped. Hydraulic regulation shall be by tamper-proof, non-critical valves. Closers shall have separate adjustment for latch speed, general speed, and hydraulic back-check.

4. All closers shall have solid forged steel main arms (and forged forearms for parallel arm closers).

5. Closer arms (and metal covers when specified) shall have a powder coating finish.

6. Provide drop, mounting plates where required.

7. Do not locate closers on the side of doors facing corridors, passageways or similar type areas. Where it is necessary, due to certain conditions and approval of the Architect, to have closers in corridors, provide such closers with parallel or track type arms.

8. All door closers shall be adjusted by the installer in accordance with the manufacturer's templates and written instructions. Closers with parallel arms shall have back-check features adjusted prior to installation.

9. Closers shall conform to all applicable code requirements relative to setting closing speeds for closers and maximum pressure for operating interior and exterior doors.

10. Door closers meeting this specification are as follows:

	LCN	Sargent	Norton
Exterior	4111S-CUSH	281-CPS	CPS7500
	4111S-H-CUSH	281-CPSH	CPS7500T

Note: Furnish necessary heavy duty parallel arm accessories such as blade stop spacer kits, brackets and or spacers for proper installation of the parallel arm foot to the frame.

Interior	4011 (Reg. arm)	281-0	7500
	4111 (Par, arm)	281-P10	PR7500
	4000T	281-OT x spec. temp.	7700STP

E. Exit Devices:

1. Shall be Von Duprin, Sargent or Precision as follow:

Function	Von Duprin	Sargent	Precision
A	99L-NL-F	12-8804ET	FL-2103x4903
B	CD9927L x LBR	16-NB8713ET	2208x4908xLBR
C	99L	8813ET	2108x4908
D	E9927L-F x LBR	12-NB8774ETL	E-FL2208 4908LBR
E	RXQEL99NL-OP	55-56-8804	TS-MRL2103-C03
F	RXQEL99EO	55-56-8810	TS-MRL2191
G	E9927L x LBR	NB8774ETL	E-162208 4908LBR
H	RXCD99EO	55-56-8810	TS-2101CD

NOTE: Lever design shall match lock trim.

Add No. 106 control at the Sargent exit devices 12-NB8774 and NB8774 when used.

F. Power Transfers: Provides a means to transfer power from the frame to the door stile. When the door is closed the unit is concealed and tamper resistant. Markar D, AR4611 or 4611-2, Securitron EPT or EPTL, Von Duprin EPT-2 or EPT-10.

G. Power Supplies: Power for use with the electrified exit devices shall be taken from the DSX power supply being supplied by the Security Contractor.

H. Key removable Mullion: Shall be Von Duprin KR 4954, Sargent L980, or Precision KR822 at non-fire rated openings. All mullions are to be furnished complete with mullion stabilizers.

I. Flush Bolts:

1. Shall be self-latching or automatic type at label doors, manual flush bolts at non-label doors.

	Ives	Trimco	Rockwood
Manual HM	FB458	3917-12”	555
WD	FB458	3917-12”	555
Self-Latching HM	FB51P	3820 x 3810	1845
WD	FB61P	3825 x 3815	1945

2. Dust Proof Strikes shall be furnished at all floor locations.

J. Automatic Coordinating: Shall be provided at all pairs of label doors equipped with overlapping astragals or where improper closing sequence would interfere with proper operating of the doors. Coordinators shall be Ives COR series, Trimco 3094 series or Rockwood 1600 series. Furnish filler pieces to close opening between coordinator and jamb of frame. Provide mounting brackets required for proper mounting of additional hardware.

K. Locksets, Latch Bolts:

1. Mortise type shall be heavy-duty ANSI A156.13, Series 1000, Grade 1 Operational, 2-3/4" backset, with lever handles. Strikes are to have curved lips and complete with a wrought strike box.

Manufacturer	Series	Lever Design
Schlage	L9000	06A
Sargent	8200	LNL
Best	40H	15H

L. Lock functions as indicated in the hardware schedule shall be as follows:

Function	Schlage	Sargent	Best
A (Spec Classroom)	71	38	INL
B (Privacy)	40	65	L
C (Storeroom)	80	04	D x Knurled O/S Lever
D (Classroom)	70	37	R
E (Office)	50	05	A
F (Vestibule)	60	16	B6/B7
G (Passage)	10	15	N
H (Storeroom)	80	04	D
I (Electric lockset)	80EL	70	EWEL (Fail safe)

Note: The above privacy set, (Function B), is to be furnished complete with occupancy indicator reading “vacant / occupied”.

M. Push Plates, Door Pulls, Push / Pull Bars:

1. Shall be as manufactured by Rockwood, Trimco or Ives.

   a. Push plates: 8” x 16”. Stile permitting, or 4" x 16" for narrow stile x .050 thickness:

Rockwood	70 Series
Trimco	1001 Series
Ives	8200 Series

   b. Door Pulls, Type A:

Rockwood	BF111
Trimco	1195-2
Ives	8103EZ-0

   c. Door Pulls, Type B: x **Mod. to have 7” CTC**

Rockwood	157
Trimco	1191-3
Ives	8190

   d. Push / Pull Bars Sets:

Rockwood	15747 x T4HD fastening
Trimco	1737JG x sim. Fastening
Quality	484 x 10” x sim. fastening

N. Kick Plates, Armor Plates:

1. Kick plates shall be 8 in. high unless otherwise noted. Armor plates shall be 34 in. high. All plates shall be 2 in. less the width of door. Plates shall be .050 thickness, bevel 4 edges, screws shall be oval head counter-sunk.

O. Stops:

1. Shall be furnished at all doors. Wherever an opened door or any item of hardware thereon strikes a wall, at 90 degrees. Provide wall bumpers, unless otherwise indicated in hardware sets.

2. Where wall bumpers cannot be effectively used, a floor stop shall be furnished and installed.

3. Provide roller bumpers for each door where two doors interfere with each other in swinging.

Manufacturer	Wall Bumpers	FloorStops	Roller
Rockwood	409	440,442	456
Ives	WS407CCV	FS436B, FS438B Series	RB470
Trimco	1270WV	1211	1244

P. Thresholds, Weatherstrip, Seal:

1. Thresholds shall be as detailed and furnished on all doors where shown on drawings. Thresholds shall be aluminum unless otherwise indicated. Set thresholds for exterior and acoustical doors in full bed of sealant complying with requirements specified in Division 7 Section "Joint Sealants".

2. All exterior and interior doors must meet the requirements of the Massachusetts Building Code 780 CMR 13.

3. Weatherstripping shall be furnished on all exterior doors unless otherwise indicated.

Product	Pemko	Reese	NGP
Threshold	as detailed		
Brush Seal	45062AP	970	A626A
Auto. Door	434ARL	430A	422N
Bottom (mortise-WD door)			
Door Sweep – Type A	345AV	353A	101VA
Door Sweep – Type B	307A	806A	97VA
Flat Bar Astragal	357SP x S88	183SP x 797B	139SP x 5050

Q. Gasketing:

1. Shall be #105 "Cush-N-Seal" as manufactured by Door and Hardware Systems, Inc. Color as selected.

R. Self-Adhesive Door Astragal Seal:

1. Shall be #SA as manufactured by Door and Hardware Systems, Inc. Color as selected.

S. Mullion Seal:

1. Shall be #MS-SA75 as manufactured by Door and Hardware Systems, Inc. Color as selected.

T. Silencers:

1. Provide silencers on all metal and wood frames. Silencers shall be Ives SR64 / SR65, Hager 307D / 308D or Rockwood 608/609.

2.11 HARDWARE SETS

A. Each Hardware Set listed below represents the complete hardware requirements for one opening (single door or pair of doors). Furnish the quantities required for each set for the work.

Set No. EX1

2 – Continuous Hinges
1 – Lockset (Function F-vestibule) x strike 7/8" LTC
2 – Manual Flush Bolts
1 – Dust Proof Strike
2 – Door Closers – CUSH
2 – Armor Plates
1 – Threshold – as detailed
2 – Door Sweeps – type A
1 – Rain Drip
1 – Flat Bar Astragal
1 – Set Weatherstripping (H, J)
2 – Door Contacts – furnished, installed by security contractor

Set No. EX2

1 – Continuous Hinge
1 – Lockset (Function C-storeroom) x tactile warning on o/s lever
1 – Door Closer (Reg. arm)
1 – Kick Plate
1 – Threshold – as detailed
1 – Door Sweep – type B
1 – Set Weatherstripping (H, J)

1 – Door Contact – furnished, installed by security contractor

Note: Install lockset at door C202A.1 so that the cylinder is on the alcove side of the door.
Install lockset at door SB03.1 so that the cylinder is on the stair SB03 side of the door. This will allow free egress from the roof.

Set No. EX3

1 – Continuous Hinge
1 – Continuous Hinge x prep for EPT
1 – Power Transfer
1 – Electric Lockset (Function I) x strike 7/8" LTC
1 – I/C Cylinder
1 – I/C Cylinder Core
1 – Power Supply – see paragraph 2.10, G
2 – Manual Flush Bolts
1 – Dust Proof Strike
2 – Door Closers – CUSH
2 – Armor Plates
1 – Threshold – as detailed
2 – Door Sweeps – type A
1 – Rain Drip
1 – Flat Bar Astragal
1 – Set Weatherstripping (H, J)
2 – Door Contacts – furnished, installed by security contractor

Note: Race way is required in the active leaf to carry power to the electric lockset.
Card reader – Furnished, installed by Section 28 23 00

Set No. EXAL1

Active leaf

1 – Continuous Hinge – 2"door x prep for EPT
1 – Power Transfer
1 – Exit Device (Function E)
1 – I/C Cylinder
1 – Cylinder Core
1 – Power Supply – see paragraph 2.10, G
1 – Door Pull – type B
1 – Power-Assist Door Operator – LCN No. 4640 Series (Flush ceiling mount)
2 – Push Plate Actuators – LCN No. 8310-853T / 8310-818T when required
1 – Overhead Concealed Door Stop
1 – Kick Plate
1 – Door Sweep – door manufacturers Standard

Inactive leaf

1 – Continuous Hinge – 2” door
1 – Exit Device (Function F)
1 – Door Pull – type B
1 – Door Closer - EDA
1 – Mounting Plate – if required
1 – Overhead Concealed Door Stop
1 – Kick Plate
1 – Door Sweep – door manufacturers standard

For the opening

1 – Key Removable Mullion
1 – I/C Cylinder
1 – Cylinder Core
1 – Mullion Seal
1 – Threshold – as detailed
1 – Set Weatherstripping – door manufacturers standard

Note: Card Reader – Furnished, installed by Section 28 23 00.
No Card Reader at door no. 002A.1

Operation: Immediate egress always allowed. Door can be manually or automatically operated. Access control system to retract and hold exit device latchbolt and enable exterior automatic operator actuator wall plate switch. Door can be manually pulled open or automatically operated by pushing wall plate which signals automatic operator to open door. Interior wall plate switch to signal automatic operator to open door. Locate wall plate actuators as directed by the architect.

Secure operation: Access by key, card reader, or buzzer system. Card reader or buzzer system will retract the exit device latchbolt and allow access, and temporarily enable exterior wall plate actuator to allow automatic operation.

Set No. EXAL2

1 – Continuous Hinge – 2” door
1 – Exit Device (Function C)
1 – I/C Cylinder
1 – Cylinder Core
1 – Door Closer – H-CUSH
1 – Mounting Plate – if required
1 – Kick Plate
1 – Threshold – as detailed
1 – Door Sweep – door manufacturer’s standard
1 – Set Weatherstripping – door manufacturer’s standard

No. EXAL3

Active leaf

1 – Continuous Hinge x prep for EPT – 2" door
1 – Power Transfer
1 – Exit Device (Function E)
1 – I/C Cylinder
1 – Cylinder Core
1 – Power Supply – see paragraph 2.10, G
1 – Door Pull – type B
1 – Door Closer - EDA
1 – Mounting Plate – if required
1 – Overhead Concealed Door Stop
1 – Kick Plate
1 – Door Sweep – door manufacturers standard

Inactive leaf

1 – Continuous Hinge – 2" door
1 – Exit Device (Function F)
1 – Door Pull – type B
1 – Door Closer - EDA
1 – Mounting Plate – if required
1 – Overhead Concealed Door Stop
1 – Kick Plate
1 – Door Sweep – door manufacturers standard

For the opening

1 – Key Removable Mullion
1 – Mullion Seal
1 – I/C Cylinder
1 – Cylinder Core
1 – Threshold – as detailed
1 – Set Weatherstripping – door manufacturers standard

Note: Card Reader – Furnished, installed by Section 28 23 00.

Operation: Immediate egress always allowed. Access control system to retract and hold exit device latchbolt. Door can be manually pulled open.

Secure operation: Access by key, card reader, or buzzer system. Card reader or buzzer system will retract the exit device latchbolt and allow access.

Set No. EXAL4

2– Continuous Hinges – 2" door x prep for EPT
2 – Power Transfers
2– Exit Device (Function H)
2 – I/C Cylinders
2 – Cylinder Cores
2 – Door Pulls – type B
1 – Key Removable Mullion
1 – I/C Cylinder
1 – Cylinder Core
1 – Mullion Seal
2 – Door Closers – H-CUSH
2 – Mounting Plates – if required
2 – Kick Plates
1 – Threshold – as detailed
2 – Door Sweeps – door manufacturer's standard
1 – Set Weatherstripping – door manufacturer's standard

Set No. AL1

2 – Continuous Hinges – 2" door
2 – Sets Push / Pull Bars
2 – Overhead Concealed Door Stops
1 – Power-Assisted Door Operator – LCN No. 4640 (flush ceiling mount)
2 – Push Plate Actuators – LCN No. 8310-853T / 8310-818T when required
1 – Door Closer (Par. arm)
1 – Mounting Plate – if required
2 – Kick Plates

Set No. AL2

2 – Continuous Hinge – 2" door
2 – Sets Push / Pull Bars
2 – Overhead Concealed Door Stops
2 – Door Closers (Par. arm)
2 – Mounting Plates – if required
2 – Kick Plates

Set No. AL3

2– Continuous Hinges – 2" door
2– Exit Devices (Function B)
4- I/C Cylinders – 2/for locking 2/for CD feature
4- Cylinder Cores
2– Overhead Concealed Door Stops
2– Door Closers (Par. arm)
2 – Mounting Plates – if required
2 – Kick Plates
Note: Provide threshold as detailed at door 114.2.

Set No. AL4

2 – Continuous Hinges – 2" door x prep for EPT
2 – Power Transfers
1 – Exit Device (Function E)
1 – I/C Cylinder
1 – Cylinder Core
1 – Power Supply – see paragraph 2.10, G
1 – Exit Device (Function F)
1 – Key Removable Mullion
1 – I/C Cylinder
1 – Cylinder Core
1 – Mullion Seal
2 – Door Pulls – type B
1 – Door Closer (Par. arm)
1 – Mounting Plate – if required
1 – Power-Assist Door Operator – LCN No. 4640 (Flush ceiling mount)
2 – Push Plate Actuators LCN- No. 8310-853T / 8310-818T
1 – Pushbutton Mini Box – Von Duprin No. 660 Series
2 – Kick Plates
Note: Card reader – Furnished, installed by security contractor. Locate wall plate actuators as directed by the architect.

Set No. AL5

2– Continuous Hinges – 2" door x prep for EPT
2 – Power Transfers
2- Exit Devices (Function H)
2 – I/C Cylinders
2 – Cylinder Cores
2– Door Closers (Par. arm)
2 – Mounting Brackets – if required
1 – Key Removable Mullion
1 – I/C Cylinder
1 – Cylinder Core
1 – Mullion Seal
2 – Kick Plates

Set No. 1

Butts
1 – Lockset (Function A-spec. classroom)
1 – Door Stop
3 –Silencers

Note: Delete door stop and silencers at door 202.1

Set No. 1A

1 – Continuous Safety Hinge – Pemko No. CFM_SF-HD1
1 – Lockset (Function A-special classroom)
1 - Door Stop
3 - Silencers
Note: Cased opening frame required at the hinge jamb.

Set No. 1B

Butts
1 – Lockset (Function E-office)
1 – Door Stop
1 – Mortise Automatic Door Bottom
1 – Set Gasketing (H, J)

Set No. 1C

Butts
1 – Lockset (Function E-office)
1 – Door Stop
3 – Silencers
Note: Furnish Continuous Safety Hinge – Pemko No. CFM_SF-HD1 at door 018.1.
Note: Provide threshold as detailed at door 115.1.

Set No. 2

Butts
1 – Latchset (Function G)
1 – Door Stop
1 – Set Gasketing (H, J)

Set No. 2A

1 – Continuous Safety Hinge – Pemko No. CFM_SF-HD1
1 – Latchset (Function G)
1 – Door Stop
1 – Set Gasketing (H, J)
Note: Cased opening frame required at the hinge jamb.

Set No. 3

Butts
1 – Push Button Access Control Lock – Alarm Lock No. DL4100 – US26D x I/C cylinder when required x optional curved lever.
1 – Cylinder Core
1 – Door Stop
1 – Door Closer (Reg. arm)
1 – Kick Plate
1 – Set Gasketing (H, J)

Note: The contractor / installer is to program the lockset, after installation, based on the code given to them by the school department.

Set No. 4

Butts
1 – Lockset (Function H-storeroom) x less strike
1 – Electric Strike
1 – Power Supply – see paragraph 2.10, G
1 – Door Stop
1 – Door Closer (Reg. arm)
1 – Kick Plate
3 – Silencers
Note: Card reader – furnished, installed by security contractor.

Set No. 5

Butts
1 – Privacy Set (Function B)
1 – Door Stop
1 – Door Closer (Reg. arm)
1 – Kick Plate
1 – Set Gasketing (H, J)

Set No. 5A

Butts
1 – Privacy Set (Function B)
1 – Door Stop
1 – Set Gasketing (H, J)

Set No. 5B
1 – Continuous Safety Hinge – Pemko No. CFM_SF-HD1
1 – Privacy Set (Function B)
1 – Door Stop
1 – Door Closer (Reg. arm)
1 – Kick Plate
1 – Set Gasketing (H,J)
Note: Cased opening frame required at the hinge jamb.

Set No. 6

Butts
1 – Lockset (Function C-storeroom) x tactile warning on o/s lever
1 – Door Stop
1 – Door Closer (Reg. arm)
1 – Kick Plate
3 – Silencers
Note: Install parallel arm door closer at doors 015.2, 016.1, 021.1, 148E.1, 248E.1 and SD02.2.

Set No. 7

Butts
1 – Lockset (Function C-storeroom)
1 – Set Self-Latching Flush Bolts
1 – Dust Proof Strike
1 – Door Coordinator x mounting bracket (when required)
2 – Door Closers (Par. Arm)
2 – Overhead Stops
2 – Silencers

Set No. 7A

Butts
1 – Lockset (Function D-classroom)
2 – Manual Flush Bolts 1/18” top location 1/12” bottom location
1 – Dust Proof Strike
2 – Door Stops
2 – Silencers

Set No. 8

Butts
1 – Exit Device (Function A) x tactile warning on o/s lever
1 – I/C Cylinder
1 – Cylinder Core
1 – Door Stop
1 – Door Closer (Par. Arm)
1 – Kick Plate
3 – Silencers

Set No. 9

Butts
1 – Lockset (Function A-special classroom)
2 – Manual Flush Bolts
1 – Dust Proof Strike
2 – Door Closers (Reg. Arm)
2 – Kick Plates
2 – Silencers
2 – Door Stops

Set No. 10

1 – Continuous Hinge
1 – Lockset (Function A-special classroom)
1 – Door Stop / Holder
3 – Silencers
1 – Kick Plate

Set No. 11

1 – Continuous Hinge
1 – Lockset (Function A-special classroom)
1 – Door Stop
1 – Door Closer (Par. Arm)
1 – Armor Plate
3 – Silencers
Note: Furnish regular arm door closer at door 005.1.

Set No. 12

Butts
1 – Lockset (Function H-storeroom)
1 – Door Stop
3 – Silencers

Set No. 13

Butts
1 – Lockset (Function H-storeroom)
1 – Door Stop
3 – Silencers
Note: Furnish lockset (Function D-classroom) at doors 006.1, 154.1 and 233A.1
Note: Provide threshold as detailed at door 116.1.

Set No. 13A

Butts
1 – Lockset (Function H-storeroom)
1 – Door Stop
3 – Silencers
1 – Door Closer (Reg. Arm)
1 – Kick Plate

Set No. 13B

Butts
1 – Lockset (Function H-storeroom)
1 – Door Stop
3 – Silencers
1 – Door Closer (Par. Arm)

Set No. 14

1 – Set Bi-Passing Door Hardware – Stanley BPC150N-00-72
1 – Pc. Facia – Stanley BP250N-02-72
2 – Flush Pulls – Ives 227B26D
1 – Set Rubber Bumpers

Set No. 15

Butts
1 – Lockset (Function A-special classroom)
1 – Door Stop
1 – Mortise Automatic Door Bottom
1 – Set Gasketing (H, J)

Set No. 16

Butts
1 – Lockset (Function A-special classroom)
1 – Door Stop
1 – Door Closer (Reg. arm)
1 – Kick Plate

Set No. 17

Butts
2 – Exit Devices (Function B)
4 – I/C Cylinders – 2/for locking - 2/for CD feature
4 – Cylinder Cores
2 – Door Stops
2 – Door Closers (Par. Arm)
2 – Kick Plates
2 – Silencers
Note: Provide threshold as detailed at 114.1.

Set No. 18

Butts
1 – Lockset (Function A-special classroom)
1 – Door Stop
1 – Mortise Automatic Door Bottom
1 –Set Gasketing (H, J)
Note: Furnish Passage Set (Function G) at door 130A.1.

Set No. 19

Butts
1 – Lockset (Function C-storeroom) x tactile warning on outside lever
1 – Set Self-Latching Flush Bolts
1 – Dust Proof Strike
1 – Door Coordinator x mounting bracket (when required)
2 – Door Closers (Par. Arm)
2 – Silencers

Set No. 20

2 – Sets – Henderson No. H440A-OH
1 – Joining Bracket – Henderson No. 1BX
2 – Single Wall Mounted Stay Rollers – Henderson No. 31S
2 – End Plate Kits – Henderson No. F200ECP
2 – Manual Flush Bolts – 12" (install face mount at the bottom of each door on the Kitchen / Servery side of the door to lock into the dust proof strikes).
2 – Dust Proof Strikes
2 – Flush Pulls – Rockwood No. BF97-US32D (mount on the Kitchen / Servery side of each door).

Set No. 21

2 – Continuous Hinges-UL x prep for EPT
2 – Power Transfers
2 – Exit Devices (Function D)
1 – Power Supply – Von Duprin PS 902-8P
2 – Door Stops
2 – Electro-Magnetic Door Holders – furnished by Section 26 00 01
2 – Door Closers – LCN 4000T Series (wall pocket mount)
1 – Self-Adhesive Door Astragal Seal
1 – Set Gasketing (H, J)
Note: Blocking is required in the wall, behind the door, to allow the door closer body to be installed on the wall. Raceway is required in the door to carry power from the frame to the exit device trim.

Card reader: Furnished, installed by security contractor.

Operation: Both doors will close, latch and lock when the fire alarm / intruder alarm system is activated as a part of the building "lock down" system. If the doors are in the closed, locked mode an authorized person can access the doors with a key or the card access system from the pull side.

Set No. 22

2 – Continuous Hinges x prep for EPT
2 – Power Transfers
2 – Exit Devices (Function G)
1 – Power Supply – Von Duprin PS 902-8P
2 – Door Stops
2 – Electro-Magnetic Door Holders – furnished by Section 26 00 01
2 – Door Closers – LCN 4000T Series (wall pocket mount)
2 – Silencers
Note: Blocking is required in the wall, behind the door, to allow the door closer body to be installed on the wall. Raceway is required in the door to carry power from the frame to the exit device trim.

Card reader – furnished, installed by security contractor.

Operation: Both doors will close, latch and lock when the fire alarm / intruder alarm system is activated as a part of the building “lock down” system. If the doors are in the closed, locked mode an authorized person can access the doors with a key or the card access system from the pull side.

Set No. 23

All hardware is to be furnished by the aluminum sliding door system supplier / roll-up shutter supplier, except as follows:

1 – I/C Cylinder (Rim or Mortise as required)
1 – Cylinder Core

2.12. MISCELLANEOUS HARDWARE (Not associated with numbered doors)

A. At transition between platform (wood floor by SECTION 096466-WOOD AND ATHLETIC FLOORING) and ramp (LCT by SECTION 090005- RESILIENT FLOORING), provide aluminum threshold, as detailed on the drawings.

PART 3 EXECUTION

3.01 GENERAL

A. Installation of hardware shall be performed under SECTION 062000-FINISH CARPENTRY and SECTION 080001-METAL WINDOWS in conformance with the following requirements.

3.02 INSPECTION

A. It shall be the General Contractor responsibility to inspect all door openings and doors to determine that each door and door frame has been properly prepared for the required hardware. If errors in dimensions or preparation are encountered, they are to be corrected by the responsible parties prior to the installation of hardware.

3.03 PREPARATION

A. All doors and frames, requiring field preparation for finish hardware, shall be carefully mortised, drilled for pilot holes, or tapped for machine screws for all items of finish hardware in accordance with the manufacturers templates and instructions.

3.04 INSTALLATION/ADJUSTMENT/LOCATION

A. All materials shall be installed in a workmanlike manner following the manufacturer's recommended instructions.

B. Exit Devices shall be carefully installed so as to permit friction free operation of crossbar, touch bar, lever. Latching mechanism shall also operate freely without friction or binding.

C. Door Closers shall be installed in accordance with the manufacturer's instructions. Each door closer shall be carefully installed, on each door, at the degree of opening indicated on the hardware schedule. Arm position shall be as shown on the instruction sheets and required by the finish hardware schedule.

D. The adjustments for all door closers shall be the installers responsibility and these adjustments shall be made at the time of installation of the door closer. The closing speed and the latching speed valves, shall be adjusted individually to provide a smooth, continuous closing action without slamming. The delayed action feature or back check valve shall also be adjusted so as to permit the correct delayed action cycle or hydraulic back check cushioning of the door in the opening cycle. All valves must be properly adjusted at the time of installation. Each door closer has adjustable spring power capable of being adjusted, in the field, from size 2 thru 6. It shall be the installers responsibility to adjust the spring power for each door closer in exact accordance with the spring power adjustment chart illustrated in the door closer installation sheet packed with each door closer.

E. Installation of all other hardware, including locksets, overhead stops / holders, door stops, plates and other items, shall be carefully coordinated with the hardware schedule and the manufacturer's instruction sheets.

F. Locations for finish hardware shall be in accordance with dimensions listed in the pamphlet "Recommended locations for Builders' Hardware" published by the Door and Hardware Institute.

3.05 FIELD QUALITY CONTROL

A. Upon completion of the installation of the finish hardware, it shall be the responsibility of the finish hardware supplier to visit the project and to examine the hardware for each door on which he has provided hardware and to verify that all hardware is in proper working order. Should he find items of hardware not operating properly, he should make a report, in writing, to the General Contractor, advising him of the problem and the measures required to correct the problem.

3.06 PROTECTION

A. All exposed portions of finish hardware shall be carefully protected, by use of cloth, adhesive backed paper or other materials, immediately after installation of the hardware item on the door. The finish shall remain protected until completion of the project. Prior to acceptance of the project by the Architect and owner, the General Contractor shall remove the protective material exposing the finish hardware.

3.07 CLEANING

A. It shall be the responsibility of the General Contractor to clean all items of finish hardware and to remove any remaining pieces of protective materials and labels.

3.08 INSTRUCTIONS AND TOOLS

A. It shall be the responsibility of the finish hardware supplier to provide installation and repair manuals and adjusting tools, wrenches, etc. for the following operating products:

1. Locksets (all types)
2. Exit Devices (all types)
3. Door Closers

END OF SECTION

Division 9
Finishes

SECTION 090002

TILE

*(Filed Sub-Bid Required)

PART 1 GENERAL

1.00 TIME, MANNER AND REQUIREMENTS FOR SUBMITTING SUB-BIDS

A. Sub-bids shall be submitted in accordance with provisions of the General Laws (Ter. Ed.), Chapter 149, Section 44A to 44L, inclusive, as amended. The time and place for submission to Sub-Bids shall be set forth under INSTRUCTIONS TO BIDDERS.

B. Each Sub-Bid filed with the Awarding Authority must be accompanied by BID BOND, or CERTIFIED CHECK, or a TREASURER'S CHECK or CASHIER'S CHECK issued by a responsible bank or trust company, payable to the **City of Amesbury** in the amount stipulated in the INSTRUCTIONS TO BIDDERS. A Sub-Bid accompanied by any other form of bid deposit than those specified will be rejected.

C. Each Sub-Bid submitted for the work, under this SECTION, shall be on a form furnished by the Awarding Authority and required by SECTION 44F of Chapter 149 of the General Laws, as amended.

D. Work to be performed under this SECTION is shown on Contract Drawings numbered:

G.0.01, G.0.02, G.0.04-G.0.08, inclusive; 2.1.00-2.8.03, inclusive; 3.4.01-3.9.15, inclusive; 4.1.01-4.3.02, inclusive; 5.2.01-5.6.13, inclusive.

Remaining Contract Drawings are included for reference and coordination.

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a sub-bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish and install the following items to complete the work of this SECTION, as shown on the Drawings and specified herein.

1. Unglazed ceramic floor tile and base, and other required shapes, installed with latex Portland Cement bond coat. Install over waterproof membrane at toilet rooms on concrete slabs on grade and slabs on deck.

    a. Multi-fixture toilet rooms shall include sloped mortar bed.

2. Glazed ceramic wall tile at multi-fixture toilet rooms, single user toilet rooms, corridor wainscots, cafeteria, kitchen and in areas otherwise shown on the Drawings, including all required shapes, installed with Latex Portland Cement bond coat, over cement backer board.

3. Porcelain tile at interior walls including all required shapes installed with Latex Portland Cement bond coat on cement backer board.

4. Quarry floor tile and integral cove base tile, including all required shapes, mud-set at servery and kitchen areas, epoxy bond in freezer/cooler units.

5. Caulking between ceramic or porcelain tile and all penetrations and dissimilar materials in the wall and floor tile and sealant at control joints in ceramic or porcelain tile floors and walls.

6. Engineered quartz stone thresholds (full width of adjacent wall assembly) with beveled edges meeting accessibility Code requirements at ceramic and porcelain tile floors and adjacent dissimilar flooring material.

7. Engineered quartz stone vertical end wall caps as shown on the drawings at wing walls in toilets.

8. Tile joint accessories, including but not limited to:

    a. Edge trim on straight surfaces, exterior corners, inside corners and termination (end) pieces.

    b. Edge reveals and corner guards.

9. **Cement grout with latex additive** for all ceramic and porcelain floor, base and wall tile**, except** use Epoxy grout at all Quarry floor and base tile.

10. Waterproof Membrane at all ceramic & quarry floor tile installed over a recessed slab **(both slab-on-grade and slab-on-deck**) with mortar bed, including at base tile at these locations. **Waterproof Membrane at all ceramic floor tile installed at slab-on-deck locations where there is no recessed slab, including at base tile at these locations**.

11. Anti-fracture Membrane at all **ceramic** floor tile **installed at slab-on-grade locations where there is no recessed slab**.

B. This subcontractor shall level and prepare surfaces as necessary to receive the work of this SECTION.

1. This subcontractor shall finish the joints between panels and corner bead flanges at cement backer board walls receiving tile.

C. This subcontractor shall furnish, install and maintain in safe adequate condition all lifts, hoisting, staging and scaffolding that are necessary for the proper execution of the work of this SECTION.

D. LEEDv4-S Requirements (Refer to SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS):

1. The work of this section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEEDv4-S Certification at "Silver" Level is an Owner Requirement that is critical to secure project funding from Massachusetts School Building Authority. LEEDv4-S requirements for the work of this section are detailed herein, and additionally in DIVISION 1 of this Project Manual.
2. For all adhesives and sealants, meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
3. For all flooring systems, meet the requirements for IEQ Credit 2, Low-Emitting Materials as identified in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
4. For all paints and coatings, meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
5. Meet the LEEDv4-S requirements for MR Credit 4, Building Product Disclosure and Optimization – Health Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers' product documentation for each product having a Health Product Declaration (HPD).

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be performed under the designated SECTIONS:

1. Concrete slab depressions and concrete floors: SECTION 033000-CAST IN PLACE CONCRETE.
2. Prefinished wood trim: SECTION 062000-FINISH CARPENTRY.
3. Interior gypsum wall board partitions, cement backer board and corner beads: SECTION 092116-GYPSUM WALLBOARD.
4. Toilet partitions: SECTION 102113- COMPARTMENTS AND CUBICLES.
5. Toilet and bath accessories: SECTION 102813-TOILET AND BATH ACCESSORIES.

1.04 INSTALLATION QUALITY ASSURANCE

A. Work under this SECTION shall be performed by a tile installation firm certified by the tile manufacturer and qualified by experience and in a financial position to do the work specified hereunder.

B. Submit, with transmission of initial samples required, the following:

1. Experience record showing the tile installation firm's training and experience in similar work.

2. List and give brief description of similar work, satisfactorily completed, with location, date of contracts, together with names and addresses of owners.

3. List of facilities and equipment available to do the work.

4. Letter from tile manufacturer certifying the installation firm is an approved installer of the submitted product

C. The tile installer shall be experienced in the supervision of tile installation in this type of work. The actual work shall be done by qualified and experienced mechanics working under his supervision or under the supervision of an experienced workroom supervisor.

D. The Architect reserves the right to reject the tile installation firm if (1) the required qualification data is not received, or (2) the data submitted indicates an unsatisfactory experience record.

E. In the event of conflicts between the Contract Drawings, the manufacturer's standards, and this specification SECTION, the more stringent requirements shall govern.

F. The tile installer shall be certified by the Manufacturer.

G. Prepare new surfaces to properly receive the materials to be furnished and installed hereunder to ensure the specified level of tolerance and bonding of tile.

1.05 GUARANTEES

A. In addition to the manufacturer's wear warranties specified herein, upon completion of the work, submit to the Architect, for transmission to the Owner, two (2) copies of a written guarantee, covering prompt and proper replacement and repair of any and all improper work and material that may become apparent within 12 months after the date of substantial completion under which the work is performed.

1.06 SUBMITTALS

A. Submit the following samples in accordance with the provisions of SECTION 013300-SUBMITTALS.

1. Manufacturer's standard samples of ceramic tile (glazed and unglazed, matte and glossy finish), quarry tile, porcelain wall and floor tile, and thresholds indicating full range of available colors for selection by the Architect.

2. Full size tiles: Up to three of each size and color of each chosen ceramic, porcelain and quarry tile. Upon the request of the Architect, one sheet of each chosen color and size dot mounted mosaic tile.

3. Descriptive literature regarding epoxy mortar, epoxy grout, dry-set Portland Cement mortar, and other grouts to be used, for approval by the Architect.

4. Color samples for grout in full range of available colors for selection by the Architect.

5. Six-inch length of each joint accessory.

6. Manufacturer's standard samples of full range of available colors for engineered stone thresholds and wall caps.

B. After final selection of colors by the Architect, submit one 12-inch x 12-inch mock-up panel of each type and color tile selected, with joint accessories, edge trim, and grouted joints in grout colors selected by the Architect.

1. Wall / Floor Condition – Include a minimum 24-inch x 24-inch mock-up panel for floor and adjacent wall condition utilizing cove accessory and wall and floor tiles.

2. Inside Corner Condition – Include a minimum 12-inch x 12-inch mock-up panels for wall to wall corner condition utilizing inside corner accessory and wall tiles.

3. Outside Corner Condition – Include a minimum 12-inch x 12-inch mock-up panels showing two (2) outside corner conditions (simulating an end wall condition) utilizing corner accessories and wall tile.

4. Bullnose Wall Condition – Include a minimum 12-inch x 12-inch tiled mock-up panel utilizing extruded aluminum cap at top of wall tile.

5. Termination (End) Condition – Include 12-inch x 12-inch outside corner conditions utilizing extruded aluminum termination accessory with wall tile on one panel only.

C. Maintenance Stock – Upon completion of the project submit to the Owner one full case of each tile type and color used.

D. LEEDv4-S Requirements (Refer to SECTION 013300-SUBMITTALS):

1. Relevant supporting documentation required by LEED for Schools v4 and as detailed in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

2. A completed LEED MATERIALS REPORTING FORM, per SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

3. Product substitution requests are subject to additional LEEDv4-S submittal requirements; see SECTION 012500-SUBSTITUTION PROCEDURES.

1.07 STANDARDS

A. Unless otherwise indicated on the Contract Drawings or supplemented or modified hereunder, all materials and installation thereof shall comply with the requirements of:

1. The American National Standards Institute and the Tile Council of America specifications, which are made a part of this SECTION to the extent required by the referenced thereto:

a. Materials Specifications ANSI A136.1.

b. Specifications for Ceramic Tile ANSI A137.1.

2. Installation of Ceramic Tile, A108 Series and A118 Series.

3. International Standards Organization (ISO), ISO 13007 Classification for Grout and Adhesives.

4. Tile Council of North America (TCNA):

a. Handbook for Ceramic, Glass and Stone Tile Installation (latest edition).

5. Trim accessories manufacturer's product guidelines and installation requirements (latest edition).

PART 2 PRODUCTS

2.00 LEEDv4-S REQUIREMENTS

A. Products and materials used for this section of the work are required to meet the following criteria for LEEDv4-S materials Credits, and a completed LEEDv4-S MATERIALS REPORTING FORM shall be submitted for all materials in this SECTION:

1. Furnish any adhesives and sealants such that they meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113 - SUSTAINABLE DESIGN REQUIREMENTS.
2. Recycled Content. (See SECTION 018113 - SUSTAINABLE DESIGN REQUIREMENTS for overall project recycled content requirements.) General Contractor shall examine each product or material specification below for a stated minimum recycled content requirement, and if none is stated, the requirements under 018113 shall govern.
3. Regional Content. (See Section 018113 Sustainable Design Requirements for overall project regional content requirements.) General Contractor shall examine each product or material specification below for a stated minimum regional content requirement, and if none is stated, the requirements under 018113 shall govern.
4. Furnish any paints and coatings such that they meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113 - SUSTAINABLE DESIGN REQUIREMENTS.
5. Furnish all flooring materials and all setting bed and grout materials such that they meet the requirements for IEQ Credit 2 as defined in SECTION 018113 - SUSTAINABLE DESIGN REQUIREMENTS.

2.01 MATERIALS

A. Quality, Grade and Certificate – Tile containers shall be grade-sealed in accordance with minimum grade specifications described in ANSI A137.1 (latest edition), with cartons clearly marked as to contents, color, and quantity, and shall be unbroken when received at the project. In addition to grade seal, furnish, with initial shipment, Master Grade Certificate stating grade, kind of tile, identification marks for tile packages and the name and location of the project, signed by the manufacturer.

B. Manufacture – To establish a standard of quality and design, drawings are based on the following products. Tile by other manufactures matching the specified products in color, sheen and size will be considered for approval by the Architect upon receipt of adequate supporting data and samples.

1. Quarry Tile – Kitchen and support rooms, servery, cooler/freezer.

   a. Manufacture: American Olean

   b. Size: 8-inch x 8-inch x ½-inch thick with a 5-inch x 8-inch coved base, including manufacturer's inside and outside corners.

   c. Finish: Abrasive Grain.

   d. Color: Color selection will be from Color Group 2.

   e. Quarry Tile by Metropolitan Ceramics, Daltile or other manufacturers matching the specified products in color, texture, sheen and size will be considered for approval by the Architect upon receipt of adequate supporting data and samples.

   f. Sealer – A sealer as recommended by the tile and grout manufacturers at all quarry tile floors.

2. Porcelain Wall Tile – **PT Type 1** – Community and lobby corridors.

   a. Supplier: Garden State Tile

   b. Manufacturer: Alfalux

   c. Product Line: Valmalenco

   d. Size: 6-inch x 24-inch (Wainscot – field tile)

   e. Finish: Natural

   f. Color: Val Cenere

   g. Porcelain Wall Tile by Crossville (Retroactive), Daltile, American Olean Stone Source Boston or other manufacturers matching the specified products in color, texture, sheen and size will be considered for approval by the Architect upon receipt of adequate supporting data and samples.

3. Unglazed Ceramic Floor Tile and Base – **CT Types 1 & 1A** –Toilet room floors and coved base.

   a. Supplier: Daltile

   b. Product Line: Keystones

   c. Colors: 2 colors selected from manufacturer's standard colors – Color Group 2.

   d. **Type 1**: 2-inch x 2-inch (Toilet Room Floor and Cove Base installed in all toilets with full height and/or wainscot tile above cove base.)

   e. **Type 1A**: 2-inch x 2-inch (Toilet Room Floor and Cove Base with bullnose in all toilets GWB installed above cove base.)

   f. Ceramic Wall Tile by American Olean, ProSpec or other manufacturers matching the specified products in color, texture, sheen and size will be considered for approval by the Architect upon receipt of adequate supporting data and samples.

4. Ceramic Wall Tile – **CT Types 2A, 2B & 2C** – Academic corridors, cafeteria, main lobby, toilets and stairs.

   a. Supplier: Daltile

   b. Product Line: Color Wheel

   c. **Type 2A**: 4-inch x 4-inch (Academic Corridors, Single User and Multi-Fixture Toilet Rooms)

   d. **Type 2B**: 4-inch x 8-inch (Single User and Multi-Fixture Toilet Rooms)

   e. **Type 2C**: 4-inch x 12-inch (Academic Corridors, Stairs B and C, Kitchen / Servery)

   f. Finish: High Gloss

   g. Colors: Up to 5 colors will be chosen. Field color shall be chosen from standard stock colors. Accents shall be from manufacturer's full line of colors and custom colors to match Pantone System colors. Colors shall be as shown on the drawings.

   h. Ceramic Wall Tile by Johnson Tiles, Mosa Tile, Garden State Tile "Chromatica" or other manufacturers matching the specified products in color, texture, sheen and size will be considered for approval by the Architect upon receipt of adequate supporting data and samples.

5. Ceramic Wall Tile – **CT Type 3** – Multi-fixture toilet rooms.

   a. Supplier: Daltile

   b. Product Line: Festiva

   c. **Type 3:** 4-inch x 4-inch (Toilet room walls and as otherwise shown on the Drawings.)

   d. Finish: Matte

   e. Colors: Up to 6 colors selected from manufacturer's full range of colors and custom colors to match Pantone System colors.

   f. Ceramic Wall Tile by Johnson Tiles, Mosa Tile, Garden State Tile "Chromatica" or other manufacturers matching the specified products in color, texture, sheen and size will be considered for approval by the Architect upon receipt of adequate supporting data and samples.

6. Ceramic Wall Tile – **CT Type 4 (Hexagon)** – Main entry vestibule, drinking fountain alcoves, multi-fixture toilet rooms, elevator surround and cafeteria.

   a. Supplier: Daltile

   b. Product Line: Natural Hues

   c. **Type 4:** 8-inch hexagon (Full height at multi-fixture toilet sinks, cafeteria servery wall, main entry vestibule, drinking fountain alcoves, elevator surrounds and as otherwise shown on the Drawings

   d. Colors: Up to 7 colors selected from manufacturer's full line of colors and up to 2 custom colors.

   e. Ceramic Wall Tile by Johnson Tile "Prismatics", Garden State Tile "Hexa" or other manufacturers matching the specified products in color, texture, sheen and size will be considered for approval by the Architect upon receipt of adequate supporting data and samples.

C. Tile Trim –To establish a standard of quality, function and design, the trim for porcelain and ceramic tile, has been based upon trim by Schluter Systems LP, Plattsburg, NY. Similar trim by other manufacturers will be considered as an equal by the Architect upon receipt of adequate supporting data and samples.

1. Finishing & Edge Protection Aluminum Trim: **"Jolly"** shall be installed horizontally at the top of all wall tile (except, where tile extends above the finish ceiling or bullnose tile is specified for the base tile at non-tiled walls); horizontally at the bottom of all tile above the 4" resilient base; horizontally between the top of square edged cove base mosaic tile and ceramic wall tile where the installed depth of wall tile is greater than the base; vertically and horizontally between tile and the jambs and heads of all hollow metal and stainless steel door frames; vertically at outside corners where tile turns a corner; vertically and horizontally at the termination of a tile finish along a wall where the adjacent finish continues in the same plane; and as otherwise indicated on the drawings.

   a. Color/Finish: Satin Nickel Anodized Aluminum (AT)

2. PVC Movement Trim: **"Dilex-BWA"** at all inside corners between tile and tile and inside corners between tile and dissimilar materials, for example GWB (except where Finishing & Edge Aluminum Protection trim is called for at door frames).

   a. Color to be selected by Architect from manufacturers full line of colors to match grout choices– multiple colors will be selected if required.

3. The size/depth of the trim profiles shall match the thickness of the submitted/approved tile. Coordination with the approved tile is required and may result in more than one size required for each profile.

4. Provide tile trim in maximum available lengths. In no case shall trim pieces less than 12 inches long be used. In all cases, runs of 4 ft. or less shall be made with one continuous piece of trim.

D. Thresholds and Vertical Wall Caps – Engineered stone thresholds shall be as manufactured by Cambria Co., LLC, Le Sueur, MN, Caesarstone, Charlotte, NC, or Silestone, Coral Gable, FL. Other manufacturers may be considered as an equal by the Architect upon receipt of adequate supporting data and samples.

1. Color: As selected by the Architect from full range of available colors. Colors at thresholds and wall caps shall be chosen independently.
2. Material for thresholds shall be ½-inch or ¾-inch as shown on the Drawings and as required for the transition between materials.
3. Material for wall caps shall be nominal ¾-inch thick or as otherwise shown on the Drawings.

E. Mud-Set Portland Cement (at depressed slab-on-grade areas to receive ceramic tile or quarry tile) – Setting bed materials including Portland Cement (conforming to ASTM C-150, Type 1), sand reinforcing (conforming to ASTM C-144, passing a No. 8 sieve), 4 mil polyethylene film and expansion joint materials, all conforming to ANSI A108.1 and TCNA specifications F111.

F. Epoxy mortar and grout conforming to ANSI A108.6 and A118.3.

G. Grout for floor and wall tile-50 percent fine silica sand and 50 percent white Portland Cement, with special latex additive, in colors as selected by Architect.

H. Caulking materials, having a VOC content of 250 g/L or less, as follows:

1. For floor control joints – One-part mildew resistant silicone rubber sealant: Dow Corning 786, Pecora 898 Sanitary Silicone Sealant, GE Silicones sanitary 170, or approved equal.
2. For walls – Pecora acrylic latex caulk AC-20, DAP acrylic latex caulk, Gibson Holman acrylic latex caulk, or equal, in color as selected by Architect.

I. Anti-Fracture Membrane – For application over floor slabs prior to installing conventional setting bed – 2-part system consisting of a liquid rubber and reinforcing fabric, “Blue 92 Anti-fracture” as manufactured by Laticrete or an approved equal.

J. Reinforcing for Mortar Bed at Tile Flooring – 2-inch x 2-inch 16/16 welded wire mesh.

K. Latex Portland Cement Bond Coat – Mixture of Portland Cement, sand and special latex additive for setting tile, conforming to ANSI A108.5 and ANSI A118.4.

~~L. Division Strips – Plastic angle type, ¼-inch deep, with 1/8-inch exposed thickness, in color as selected by the Architect, Manhattan American Thin set Dividing Strip, Rudel Floor Strip Company, or approved equal.~~

L. Waterproofing Membrane – fluid applied fabric reinforced waterproofing and crack suppression membrane compatible with the tile setting system specified herein with a VOC content of 65 g/L or less: Laticrete 9235 waterproof membrane, MAPEI PRP M19, Summitville S-9000, or approved equal.

PART 3 EXECUTION

3.01 PRE-INSTALLATION REQUIREMENTS

A. Be fully responsible for the execution and performance of the work described herein. Inspect all surfaces and request that the General Contractor correct any conditions which may affect this work adversely. Report to the Architect, prior to commencing any portion of this work, any failure of the General Contractor to provide suitable surfaces or working conditions for this portion of the work. Failure to make such a report shall be construed as an acceptance of the conditions.

B. Schedule pre-installation meeting with Architect to review layouts and patterns prior to commencing any portion of this work.

3.02 INSTALLATION OF CERAMIC TILE, PORCELAIN TILE, QUARRY TILE AND RELATED ITEMS

A. Follow installation procedures as set forth in the following:

1. Trim – Install trim in accordance with the TCNA and manufacturer's recommendations.

a. Aluminum Finishing & Edge Protection Trim:

1) Install aluminum trim wherever tile abuts hollow metal and stainless steel door frames, at the perimeter of wall tile installations (including the top of wainscots, where full height tile stops at or below the finished ceiling, at the bottom of tile installation above resilient bases), between tile of different installed thicknesses, at outside corners where tile installation continues around corners and as shown on drawings.

2) Corners shall be mitered and all field cut edges filed smooth.

b. PVC Movement Trim:

1) Install PVC trim, at inside corners between two walls with tile, and at inside corners between tile and GWB (or other dissimilar finish) and as shown on the drawings.

2) Where full height tile and tile wainscot meet at an inside corner, PVC Trim shall be used between the full height tile and the GWB above the wainscot and at the wainscot tile where it meets the full height tile wall. Wainscot tile shall be capped with aluminum trim as specified above.

2. For ceramic floor tiles in toilet rooms and lobby/corridors over slabs-on-grade where there is no slab depression, over an anti-fracture membrane: TCNA F113 and ANSI A118.4 (latex Portland cement mortar as recommended by manufacturer for above-ground use).

3. For ceramic tile floors over waterproof membrane on slabs-on-deck where there is no slab depression: Thin set (TCNA F122 and ANSI 108.5).

4. For ceramic tile floors in multi-fixture toilet rooms with a slab depression, with sloped reinforced mortar bed over a waterproof membrane: TCNA F121 and ANSI 108.1 and A108.10.

5. For ceramic and porcelain wall tile on cement backer board: TCNA W244C and ANSI A118.4 (latex Portland cement mortar).

6. Quarry tile at designated mud-set in kitchen areas shall have epoxy grout and sealer in accordance with TCNA F-114.

    a. Quarry tile in freezer / cooler units shall be epoxy set with epoxy grout.

    b. All quarry tile shall be sealed in accordance with manufacturer's recommendation

B. Joint Treatment at Cement Backer Board - Fill horizontal and vertical joints solid and finish cornerbead flanges with latex-Portland cement mortar and tape with 2-inch alkali resistant glass fiber tape in accordance with the tile manufacturer's recommendation and applicable TCNA Design Standard. At corners tape joints using skim coat of latex-Portland cement mortar, but do not fill.

C. Set tile in strict accordance with specified standards and manufacturer's recommendations. Install control joints per TCNA recommendations for the various flooring conditions.

~~1. Movement Trim – Jolly trim and Quadec trim.~~

1. Using a notched trowel, apply thin-set mortar to the area where the profile is to be placed. At outside wall corner, finish tiling one wall first, then trowel thin-set mortar over the corner area of the second wall. Large format tile (any dimension 15 inches or greater) shall be back buttered with the trowel's non-notched edge.

2. Press the perforated anchoring leg of profile into the mortar and align.

3. Trowel additional thin-set mortar over the perforated anchoring leg to ensure full coverage and support of the tile edges.

4. Solidly embed the tiles so that the tiled surface is flush with the top of the profile; the profile should not be higher than the tiled surface, but rather up to approximately 1/32 inch (1 mm).

5. Set the tile to the integrated joint spacer (spline), which ensures a uniform joint of 1/16 inch - 1/8 inch

6. To set tile along the face, apply thin-set mortar (**medium-set mortar at tiles where one or more dimensions exceed 15 inches**) to the back of the tile using a margin trowel. Press the back-buttered tiles into the face of the profile, making sure to force thin-set mortar (medium-set where applicable) fully into the dovetailed grooves. The tiled surface should be flush with the outer edge of the profile.

7. Fill joints completely with grout or setting material.

8. Work with materials and tools that will not scratch or damage sensitive surfaces. Setting materials must be removed immediately.

9. Corners and end caps shall be held in place with thin-set mortar (**medium-set where applicable**.) Fill the ends of the profile with thin-set mortar (medium-set where applicable) prior to inserting the accessories. Connector shall be held in place with a friction fit. Insert the connector into the profile approximately half the length of the connector piece and connect the adjacent profile.

D. Set tile with all joints in true line, and with faces of tile in absolutely true plane, free from projecting or recessed edges. Use surface bullnose units and applicable jolly accessories wherever edges will be exposed.

E. Carefully cut tile around penetrations therein, such as piping and accessories.

F. Base – Install cove base pieces where ceramic tile bases are scheduled. Use bullnose top of base tile below GWB and FRP wall finishes. Use tile with square edged top below ceramic tile wall finishes. Where ceramic wall tile is of a greater installed depth than the base use metal aluminum edge trim between cove base tile and wall tile.

G. Grouting of tile shall be performed in accordance with tile manufacturer's recommendations, using a pressure gun provided with a special grouting nozzle.

H. Mask adjacent areas not intended to receive grout including, but not limited to, gap between Schluter trim and hollow metal frames.

I. After grouting, all areas shall be thoroughly cleaned by washing and sponging and buffing with clear, dry cloths.

J. All work shall be cured as recommended by manufacturers.

K. Apply specified caulking materials around all items penetrating the wall and floor tile surfaces, tooling the materials to a smooth, dense finish.

L. Perform all cleaning of tile surfaces as specified in the applicable Standards.

3.03 INSTALLATION OF LATEX CAULKING MATERIALS

A. Thoroughly clean all joints, removing all loose mortar, oil, grease, dust, frost, and other foreign materials which will prevent proper adhesion. Apply masking tape to each exposed surface of joints. Rake out joints to properly receive new sealant.

B. After cleaning, and if so recommended by the materials manufacturer, apply primer to all joint surfaces, taking care not to stain adjacent surfaces.

3.04 PROTECTION

A. Exercise every reasonable precaution to avoid damage to the work of other trades and repair any damage so caused bearing all expenses therefore. Protect the work at all times and arrange with the General Contractor for closing off of all traffic and other work when this is necessary to avoid all damage to the finished surfaces before they are set up.

END OF SECTION

SECTION 090003

ACOUSTICAL TILE

*(Filed Sub-Bid Required)

PART 1 GENERAL

1.00 TIME, MANNER AND REQUIREMENTS FOR SUBMITTING SUB-BIDS

A. Sub-bids shall be submitted in accordance with provisions of the General Laws (Ter. Ed.), Chapter 149, Section 44A to 44L, inclusive, as amended. The time and place for submission to Sub-Bids shall be set forth under INSTRUCTIONS TO BIDDERS.

B. Each Sub-Bid filed with the Awarding Authority must be accompanied by BID BOND, or CERTIFIED CHECK, or a TREASURER'S CHECK or CASHIER'S CHECK issued by a responsible bank or trust company, payable to the **City of Amesbury** in the amount stipulated in the INSTRUCTIONS TO BIDDERS. A Sub-Bid accompanied by any other form of bid deposit than those specified will be rejected.

C. Each Sub-Bid submitted for the work, under this SECTION, shall be on a form furnished by the Awarding Authority and required by SECTION 44F of Chapter 149 of the General Laws, as amended.

D. Work to be performed under this SECTION is shown on Contract Drawings numbered:

G.0.01, G.0.02, G.0.04-G.0.08, inclusive; 2.1.00-2.8.03, inclusive; 3.4.01-3.9.15, inclusive; 4.3.01-5.4.11, inclusive; 5.6.01-5.6.13, inclusive; 6.1.00-6.2.01, inclusive; 7.4.01-7.4.03, inclusive; 8.4.01-8.5.03, inclusive; 9.4.01-9.7.07, inclusive; and 10.0.01-10.3.13, inclusive.

Remaining Contract Drawings are included for reference and coordination.

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a sub-bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish and install the following, as shown on the Drawings and specified herein:

1. Suspended acoustical tile ceilings, in the size and lay-in type, including grid suspension system, prefinished metal trim, and accessories as specified herein.

2. Perform all cutting in new ceilings furnished hereunder for items which penetrate these surfaces.

B. This subcontractor shall furnish, install, and maintain in safe adequate condition all lifts, hoisting, staging and scaffolding that are necessary for the proper execution of the work of this Section.

C. LEEDv4-S Requirements:

1. The work of this section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEEDv4-S Certification at "Silver" Level is an Owner Requirement that is critical to secure project funding from the Massachusetts School Building Authority. LEEDv4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.

2. Meet the LEEDv4-S requirements for MR Credit 4, Building Product Disclosure and Optimization – Health Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers' product documentation for each product having a Health Product Declaration (HPD).

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be performed under the designated SECTIONS:

1. Gypsum wallboard (acoustical) ceiling installed above lay-in ceiling at designated spaces and gypsum wallboard construction at project area "clouds": SECTION 092116-GYPSUM WALLBOARD.

2. Electrical fixtures, including supports therefor, wiring and correlated electrical work: SECTION 260001-ELECTRICAL.

3. Kitchen exhaust hood, HVAC registers and grilles, and related mechanical work: SECTION 114000-FOOD SERVICE EQUIPMENT, and SECTION 230001-HEATING, VENTILATING and AIR CONDITIONING.

4. Sprinkler heads and piping and related fire protection work: SECTION 210001-FIRE PROTECTION.

5. Roller shade ceiling pocket: SECTION 122413-ROLLER SHADES.

1.04 QUALITY ASSURANCE

A. Installation of the work under this SECTION shall be performed by an acoustical subcontractor approved by the manufacturers of the materials.

B. Warranty: Manufacturer's standard 30-year systems warranty against visible sag, mold and mildew.

1.05 SUBMITTALS

A. Submit complete shop drawings in accordance with the provisions of SECTION 013300-SUBMITTALS.

1. Shop drawings shall include a complete reflected ceiling plan of each type of ceiling, indicating by dimension, locations of lighting fixtures, and other items penetrating acoustical ceilings. Shop drawings shall include details of ceiling cove systems,
2. Submit shop drawings and structural calculations for "cloud" suspension system, prepared and stamped by a structural engineer registered in the Commonwealth of Massachusetts.
3. Include, with initial shop drawings submitted, certified Underwriter's Laboratories tests for ceiling systems proposed for use, applicable to the various structural conditions to which the systems will be installed.

B. Submit the following samples in accordance with the provisions of SECTION 013300-SUBMITTALS.

1. Sample of each acoustical tile proposed for use.
2. Sample of each member of acoustical tile fastening system and suspension system proposed for use, 4 inches long.
3. Sample of each member of curved and flat perforated metal suspended ceiling systems, including panels and each member of fastening system and suspension including insulating accessories and colors.

C. Submit additional tile units equal to 2% of the total installed for each type of tile used for use by the Owner.

D. LEEDv4-S Submittals (Refer to SECTION 013300-SUBMITTALS):

1. Relevant supporting documentation required by LEED for Schools v4 and as detailed in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
2. A completed LEED MATERIALS REPORTING FORM, per SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

3. Product substitution requests are subject to additional LEEDv4-S submittal requirements, see SECTION 012500-SUBSTITUTION PROCEDURES.

1.06 JOB CONDITIONS

A. Ensure that all wet work, including masonry and concrete, is completed and dried out prior to commencing tile work. Start no work until uniform temperatures of at least 60 degrees F. before, during and after installation of ceiling system can be assured. Be responsible for examination and acceptance of all surfaces and conditions affecting the proper installation of materials required hereunder and do not proceed until all unsatisfactory conditions have been corrected.

PART 2 PRODUCTS

2.00 LEEDv4-S REQUIREMENTS

A. Products and materials used for this section of the work are required to meet the following criteria for LEEDv4-S materials Credits, and a completed LEEDv4-S MATERIALS REPORTING FORM shall be submitted for all materials in this SECTION:

1. Recycled Content. (See Section 018113 Sustainable Design Requirements for overall project recycled content requirements.) The Contractor shall examine each product or material specification below for a stated minimum recycled content requirement, and if none is stated, the requirements under 018113 shall govern.
2. Regional Content. (See Section 018113 Sustainable Design Requirements for overall project regional content requirements.) The Contractor shall examine each product or material specification below for a stated minimum regional content requirement, and if none is stated, the requirements under 018113 shall govern.
3. Certified Wood (FSC). (See Section 018113 Sustainable Design Requirements for overall project FSC-Certified wood content requirements.) For the sum of all wood products in this section, a minimum of 50% FSC wood is required.
4. Furnish any composite wood and agrifiber products installed inside the air and vapor barrier such that they do not contain any added urea-formaldehyde resins. Laminating adhesives used to fabricate on site AND shop applied composite wood and agrifiber assemblies must also not contain any added urea-formaldehyde resins.
5. Furnish any adhesives and sealants such that they meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
6. Furnish any paints and coatings such that they meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
7. Furnish any ceiling and wall system components, including gypsum board products, insulation, acoustical ceiling systems and wall coverings, that are inside the air and vapor barrier, such that they meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

2.01 SUSPENDED ACOUSTICAL TILE SYSTEMS

A. General – Refer to the reflected ceiling plans and room finish schedules for layout and locations of lay-in and concealed grid acoustical tile ceilings, and to the Drawings for details of installation methods.

B. Manufacturer (Ceiling Grid) – To establish a standard of quality, design and function, drawings have been based upon Armstrong. Acoustical tile ceiling grid systems by Rockfon, USG Corp., Certainteed or other manufacturers of similar quality, design, and function will be considered for approval as an equal upon receipt of adequate supporting data and samples.

C. Suspension System (15/16") (storage, custodial, electrical/data closets, privacy toilets) – intermediate duty system, "Prelude XL" by Armstrong or approved equal. The system shall accommodate readily available 24 x 24 inch lay-in panels, light fixtures, and air diffusers.

1. Recycled Material Content: At least 23% post-consumer, 30% total.
2. Fasteners for hangers:
   a. For concrete overhead – Power activated acoustic hanger eyes, Ramset, Phillips, or equal.
   b. For steel overhead – Nelson acoustical hanger studs, or equal.
   c. GWB above ceiling – Occurs in Music and Practice Rooms and fire-rated GWB duct terminations in classrooms.
3. Hangers – 12-gauge galvanized steel wire.
4. Main runners – intermediate duty, conforming to ASTM C 635, of cold rolled galvanized steel. Main runners shall be of double-web construction, web height 1-1/2 inch with rectangular top bulb and 15/16 in. bottom flange with painted electro-galvanized steel capping and slotted at 6 inches o.c. to receive cross tees for 24 x 24-inch grid and for 24 x 48 inch grid.
5. Cross tees – identical in cross-section to main runners, 4 feet and 2 feet nominal length, with stab-type end detail allowing removal without tools, and override at each end.
6. Wall angles – 90 degrees cross-section, 15/16 in. by 15/16 in. hemmed legs, 12 feet 0 inches nom. length.
   a. Wall angles at metal Vector tiles – Channel molding, 90° channel section, 7/8 in. x 1 ¾ in. x 9/16 in. hemmed legs, prefinished to match grid, with spreader channel at cut panels.

7. Main runners, cross tees and wall angles shall have baked polyester finish.

    a. Colors shall be gun metal at wood look metal tiles, custom color to match clouds (four colors to be selected) and matte white at all other ceilings.

8. Curved wall angles (where applicable) – Flexible wall co-polymer vinyl angles, 15/16 in. by 2 in., matte white, by Flex Trim Corp., Bedford, TX, Armstrong, or approved equal. Flexible wall angle shall be fire-rated in accordance with ASTM - UL94 Flame Test V-O.

9. Ceiling trim – Prefinished trim as shown on the drawings, as follows:

    a. Extruded aluminum perimeter, including for vector edge tiles, and ceiling cove and light slot trim – Armstrong Axiom or approved equal, in profiles shown on the drawings, custom color to match suspension system.

10. See 2.03 Miscellaneous Specialties for other materials.

D. Suspension System (kitchen) – intermediate duty system, "Prelude Plus XL Fire Guard" (kitchen). The system shall accommodate readily available 24 x 24 inch lay-in panels, light fixtures, and air diffusers.

1. Recycled Material Content: At least 23% post-consumer, 30% total.

2. Fasteners for hangers:

    a. For concrete overhead – Power activated acoustic hanger eyes, Ramset, Phillips, or equal.

    b. For steel overhead – Nelson acoustical hanger studs, or equal.

3. Hangers – 12-gauge galvanized steel wire.

4. Main runners – Intermediate duty, conforming to ASTM C 635, of minimum G90 hot dipped galvanized steel. Main runners shall be of double-web construction, web height 1-1/2 inch with rectangular top bulb and 15/16 in. bottom flange with painted aluminum capping (interior) and prefinished hot dipped galvanized steel capping (exterior) and slotted at 6 inches o.c. to receive cross tees for 24 x 24 inch grid and for 24 x 48 inch grid.

5. Cross tees – Identical in cross-section to main runners, 4 feet 0 inches and 2 feet 0 inches nom. length, with stab-type end detail allowing removal without tools, and override at each end.

6. Wall angles – 90 degrees cross-section, 15/16 in. by 15/16 in. hemmed legs, 12 feet 0 inches nom. length.

    a. Wall angles at metal vector tiles: Channel molding, 90° channel section, 7/8 in. x 1 ¾ in. x 9/16 in. hemmed legs, custom painted to match grid.

7. Main runners, cross tees and wall angles shall have matte white baked polyester finish unless otherwise specified.

8. Curved wall angles (where applicable) – Flexible wall co-polymer vinyl angles, 15/16 in. by 2 in., matte white, by Flex Trim Corp., Bedford, TX, Armstrong, or approved equal. Flexible wall angle shall be fire-rated in accordance with ASTM - UL94 Flame Test V-O.

9. See 2.03 Miscellaneous Accessories for other materials.

E. Suspension System (Typical) – Intermediate duty environmental system, "Suprafine XL" by Armstrong or approved equal. The system shall accommodate readily available 24 x 24 inch lay-in panels, light fixtures, and air diffusers.

1. Fasteners for hangers:

   a. For concrete overhead – Power activated acoustic hanger eyes, Ramset, Phillips, or equal.

   b. For steel overhead – Nelson acoustical hanger studs, or equal.

2. Hangers – 12-gauge galvanized steel wire.

3. Main runners – Intermediate duty, conforming to ASTM C 635, of cold rolled hot-dipped galvanized and coated steel. Main runners shall be of double-web construction, web height 1-1/2 inch with rectangular top bulb and 9/16" bottom flange with pre-painted aluminum capping and slotted at 6 inches o.c. to receive cross tees for 24 x 24 inch grid.

4. Cross tees – Identical in cross-section to main runners, 4 feet 0 inches and 2 feet 0 inches nom. length, with stab-type end detail allowing removal without tools, and override at each end.

5. Wall angles – 90 degrees cross-section, 9/16 by 9/16-inch hemmed legs with aluminum caps, 12 feet 0 inches nom. length.

6. Main runners, crosstees and wall angles shall have matte white baked polyester finish.

7. Extended wall trim at window heads – Armstrong Fascia Molding for reveals less than eight inches and Armstrong Axiom extruded perimeter trim for reveals greater than eight inches.

8. Suspension systems by USG, Certainteed, Chicago Metallic or other manufacturers will be considered as an equal by the architect upon receipt of adequate supporting data and samples.

F. Manufacturer (Acoustical Tile) – To establish a standard of quality, design, and function, drawings have been based upon Armstrong. Acoustical ceiling tiles manufactured by USG Corp., CertainTeed Ceilings and Metal Ceiling tile systems by Steel Ceilings, Inc. or other manufacturers of similar quality, design and function as determined by the Architect will be considered for approval as an equal upon receipt of adequate supporting data.

G. Acoustical Panels (**ATC-1**: Classrooms, Kindergarten Classrooms, Music, Practice, Work Rooms, Staff Lunch, Admin Offices, Nurse's Suite, Offices and Conference Rooms) – Beveled tegular edge, "Ultima" No. 1912, 24 inches x 24 inches x ¾ inch thick lay in, color matte white, as manufactured by Armstrong or an approved equal.

1. NRC – .75
2. CAC – 35
3. Light Reflectance – .88
4. Fire Resistance – Class A
5. Recycled Material Content – Up to 76% total
6. Emissions Testing: SECTION 01350 Protocol, <13.5 ppb of formaldehyde when used under typical conditions required by ASHRAE Standard 62.1 – 2004, "Ventilation for Acceptable Indoor Air Quality".
7. Panels by USG, Certainteed, or other manufacturers will be considered as an equal by the architect upon receipt of adequate supporting data and samples.
8. Suspension system: 9/16-inch system as specified under 2.01 E.

H. Acoustic Panels (**ATC-1A**: Corridors, Stairs, Student Toilets and Project Areas (high/low)) – The acoustical tile panels shall be angled tegular edged "School Zone Fine Fissured" No. 1719, 24 inches x 24 inches x 3/4 inch lay-in, color white, as manufactured by Armstrong, or approved equal.

1. NRC – .70
2. CAC – 40
3. Light Reflectance – .85
4. Fire Resistance – Class A
5. Recycled Material Content: Up to 56%.
6. Emissions testing: Section 01350 Protocol, <13.5 ppb or formaldehyde when used under typical conditions required by ASHRAE Standard 62.1 - 2004, "Ventilation for Acceptable Indoor Air Quality".
7. Panels by USG ("Radar CP Hi NRC #22121"), Certainteed or other manufacturers will be considered as an equal by the Architect upon receipt of adequate supporting data and samples.
8. Suspension system: 9/16-inch system as specified under 2.01 E.

I. Acoustic Panels (**ATC-1B**: Pre-Kindergarten Classrooms, Library and Cafeteria Ceilings) – The acoustical tile panels shall be square tegular edged, "Optima" No. 3251 PB and 3257 PB, 24 inches x 24 inches x 1 inch and 24 inches x 48 inches x 1 inch, respectively, color white, as manufactured by Armstrong, or approved equal.

1. NRC – .95
2. CAC – N/A
3. Light Reflectance – .88
4. Fire Resistance – Class A
5. Recycled Material Content: At least 72% total.
6. Emissions testing: Section 01350 Protocol, <13.5 ppb or formaldehyde when used under typical conditions required by ASHRAE Standard 62.1 - 2004, "Ventilation for Acceptable Indoor Air Quality".
7. Panels by USG, Certainteed or other manufacturers will be considered as an equal by the Architect upon receipt of adequate supporting data and samples.
8. Suspension system: 9/16-inch system as specified under 2.01 E.

J. Moisture Resistant Acoustical Panels (**ATC-2**: Kitchen, Kitchen Office, Dry Storage and Mop) – The non-perforated acoustical tile panels shall be "Kitchen Zone 673", 24 inches x 24 inches x 5/8 inch lay in, color matte white, having a scrubbable face, as manufactured by Armstrong, or an approved equal.

1. NRC – N/A
2. CAC – 33
3. Light Reflectance – .89
4. Fire Resistance – Class A
5. Recycled Material Content: Up to 36%
6. Emissions Testing: SECTION 01350 Protocol, <13.5 ppb of formaldehyde when used under typical conditions required by ASHRAE Standard 62.1 – 2004, "Ventilation for Acceptable Indoor Air Quality".
7. Panels by USG ("Kitchen lay-in 3210"), Certainteed "VinylRock", or other manufacturers will be considered as an equal by the architect upon receipt of adequate supporting data and samples.
8. Suspension System: 15/16 in. system as specified under 2.01.C.

K. Acoustic Panels (**ATC-3**: Privacy Toilets and PE Office) – The acoustical tile panels shall be angled tegular edged "Fine Fissured" No. 1732, 24 inches x 24 inches x 5/8 inch lay-in, color white, as manufactured by Armstrong, or approved equal.

1. NRC – .55
2. CAC – 35
3. Light Reflectance – .85
4. Fire Resistance – Class A
5. Recycled Material Content: Up to 73% total.
6. Emissions Testing: Section 01350 Protocol, <13.5 ppb or formaldehyde when used under typical conditions required by ASHRAE Standard 62.1 - 2004, "Ventilation for Acceptable Indoor Air Quality".
7. Panels by USG ("Radar CP Hi NRC #22121"), Certainteed or other manufacturers will be considered as an equal by the Architect upon receipt of adequate supporting data and samples.
8. Suspension System: 15/16 in. system as specified under 2.01.C.

L. Acoustic Panels (**ATC-3A**: Platform) – The acoustical tile panels shall be angled tegular edged "Fine Fissured" No. 1732, 24 inches x 24 inches x 5/8 inch lay-in, color Grey Stone (GS), as manufactured by Armstrong, or approved equal.

1. NRC – .55
2. CAC – 35
3. Light Reflectance – N/A
4. Fire Resistance – Class A
5. Recycled Material Content: At least 72% total.
6. Emissions Testing: Section 01350 Protocol, <13.5 ppb or formaldehyde when used under typical conditions required by ASHRAE Standard 62.1 - 2004, "Ventilation for Acceptable Indoor Air Quality".
7. Panels by USG ("Radar CP Hi NRC #22121"), Certainteed or other manufacturers will be considered as an equal by the Architect upon receipt of adequate supporting data and samples.
8. Suspension System: 15/16 in. system as specified under 2.01.C in matching Grey Stone.

M. Acoustical Panels (**ATC-4**: Project Area Clouds): Square edged "Calla Colorations" #2820, 24 inches x 24 inches x 1 inch thick lay-in, in factory painted custom colors as selected by the Architect (six colors to be selected), as manufactured by Armstrong or an approved equal. Cloud perimeter edge trim shall be straight at Project Areas "High Axiom Classic," custom color (up to six colors to be selected).

1. NRC – .85
2. CAC – .35
3. Light Reflectance – .85 (white) – varies by colors chosen.
4. Fire Resistance – Class A
5. Biobased Material Content: Up to 81%
6. Emissions Testing: SECTION 01350 Protocol, <13.5 ppb of formaldehyde when used under typical conditions required by ASHRAE Standard 62.1 – 2004, "Ventilation for Acceptable Indoor Air Quality".
7. Panels by USG, Certainteed, or other manufacturers will be considered as an equal by the architect upon receipt of adequate supporting data and samples.
8. Suspension System: 15/16 in. system as specified under 2.01 C. Cloud tile panels, suspension system and perimeter trim shall be factory painted to match custom tile colors. Up to six colors will be selected by the Architect for the clouds.
9. Clouds are suspended below other acoustic ceilings or GWB soffits.

N. Canopies (**ATC-5**: Cafeteria at platform above proscenium): The rectangular canopies shall be "WoodWorks Linear Veneered Planks" as manufactured by Armstrong or an approved equal.

1. Type: WoodWorks (unperforated) linear veneered planks
2. Size and Shape: Nominal 6 in. wide planks cut to lengths shown on drawings.
3. Finish: Chosen from manufacturer's full lines of "Natural Variations", "Constants" and "Bamboo".
4. Suspension: Linear carriers with integral concealed clips Armstrong 5371 or equal.
5. Trim: Perimeter trim shall be upturned linear veneer plank material at all sides of suspended canopies matching the chosen finish.
6. Canopies shall be sized to include full 6 in. width panels. Coordinate exact sizing of canopies with MEP requirements for gaps between each unit.

O. Metal Mesh (**ATC-6**: Media Center Cloud): Square edged 'Lattice #6136AM' 24 in. x 24 in. lay-in as manufactured by Armstrong or an approved equal. Cloud perimeter edge trim shall be curved, 4-in. "Axiom AXCUR-WH". Openness factor, including suspension system, must be ≥ 70% for the entire assembly meeting NFPA 13.

1. NRC – N/A
2. Color: White (WH)
3. Fire Resistance: Class A
4. Openness Factor of Tile Minimum: 76.5% (assembly: minimum 70%)
5. Material: Cold rolled steel
6. Recycled Content: 25%
7. Suspension System: 15/16" system as specified under 2.01.C. Color: White (WH)
8. Cloud is suspended below other acoustic ceilings. Sprinklers and pendant light supports are installed in upper acoustic ceilings. Pendant cords to pass through openings in mesh panels.

2.02 MISCELLANEOUS ACCESSORIES

A. Furnish and install all acoustic ceiling trim, clips, suspension system hardware, fasteners and accessories required for a complete installation, as shown on the drawings and required for a complete installation. Such accessories include but are not limited to the following:

1. Uptight clip / cloud perimeter light fixture support (Armstrong QSUTC) with continuous light gauge metal fixture mounting plate.
2. Direct Load Ceiling Clip: For suspending cafeteria clouds (Armstrong DLCC) or Erico Independent Support Clip
3. Extruded Aluminum Column Rings: "Shadow Style" (Armstrong AXM 5075 CUR) color to match grid.
4. Extruded Aluminum "F" Transition Trim (Armstrong AXTR 7906-STR) Note: two custom colors shall be used.
5. Fascia moulding, 4 inches x 1 inch with prefinished exposed flanges (Armstrong 7814) color to match grid.
6. Light Cove Reveal Trim: 8-inch extruded aluminum (Armstrong Axiom AX8 STR and CUR) with premitered outside corners (AX8QSOS) color white.
7. Light Cove Trim: 4 inch straight extruded aluminum (Armstrong Axiom AX4 STR and CUR) with premitered outside corners (AX4 QSOS) color white.

8. Edge Trim at Metalworks Vector Ceilings at cut tiles and at light fixtures: Preformed edge cap (Armstrong 6098/MY) factory gunmetal grey finish matching grid.

PART 3 EXECUTION

3.01 INSTALLATION

A. The ceiling suspension systems shall be installed per the recommendations of ASTM C 636 and ASCE 7. Loading of any component shall not cause deflection of more than 1/360 of the span.

B. Main runners shall be installed 48 inches on center and be directly suspended by 12-gauge galvanized steel wire spaced 48 inches on center along the main runners. Hanger wires shall be wrapped tightly at least 3 full turns.

C. Wall moldings shall be installed wherever suspension components meet vertical surfaces.

1. Install flexible vinyl wall angle at all inside and outside radius curved walls per manufacturer's recommendations. At inside radius curves use conventional heat gun to remove ripples.

D. Acoustical panels shall be installed in accordance with the manufacturer's recommendations.

E. Integral Cove Ceilings: Install in accordance with the approved shop drawings and the manufacturer’s requirements.

3.02 CLEANING

A. Following installation, clean soiled or discolored surfaces of tiles and suspension grid system. Remove or replace units, which are damaged or improperly installed.

B. Touch-up prefinished metal and wood ceiling systems in accordance with the recommendations of the finish manufacturer.

END OF SECTION

SECTION 090005

RESILIENT FLOORING

*(Filed Sub-Bid Required)

PART 1 GENERAL

1.00 TIME, MANNER AND REQUIREMENTS FOR SUBMITTING SUB-BIDS (TRADE BIDS)

A. Sub-bids (Trade Bids) shall be submitted in accordance with provisions of the General Laws (Ter. Ed.), Chapter 149 Section 44A-44L, inclusive, as amended. The time and place for submission to Sub-Bids shall be set forth under INSTRUCTIONS TO BIDDERS.

B. Each Sub-Bid (Trade Bid) filed with the Awarding Authority must be accompanied by BID BOND, or CERTIFIED CHECK, or a TREASURER'S CHECK or CASHIER'S CHECK issued by a responsible bank or trust company, payable to the **City of Amesbury** in the amount stipulated in the INSTRUCTIONS TO BIDDERS. A Sub-Bid (Trade Bid) accompanied by any other form of bid deposit than those specified will be rejected.

C. Each Sub-Bid (Trade Bid) submitted for the work, under this SECTION, shall be on a form furnished by the Awarding Authority required by SECTION 44F of Chapter 149 of the General Laws, as amended.

D. Work to be performed under this SECTION is shown on Contract Drawings numbered:

G.0.01, G.0.02, G.0.04-G.0.08, inclusive; 2.1.00-2.8.03, inclusive; 3.4.01-3.4.03, inclusive; 3.7.01-4.3.02, inclusive; and 5.2.01-5.6.13, inclusive.

Remaining Contract Drawings are included for reference and coordination.

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a sub-bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish and install the following items of work as shown on the Contract Documents and as specified hereunder.

1. Synthetic Rubber (“Rubber”) Flooring, for floors so indicated, include:
   a. Step tread of one piece for nosing-tread-riser with smooth color contrasting insert at edge, stair landings, and ramp surfaces (sloping and flat), including rubber bases, corners, and end stops.
   b. Synthetic rubber tiles for floors and landings in stairwells.

c. Rubber coved and straight wall base adjacent to all rubber tiles and treads/risers/stringers.

2. Linoleum Composition Tile (LCT) for floors so indicated.

3. Quiet Room Padded Floor

4. Leveling materials required to achieve the acceptable tolerance levels specified hereunder.

5. Tile reducers and feature strip where resilient flooring meets dissimilar adjoining material (except carpeting) or where resilient flooring terminates at a level change (i.e. step down).

6. Coved vinyl base with matching end stops and preformed internal and external corners at all locations scheduled on Room Finish Schedule to receive resilient cove base including at all sealed concrete floors.

7. Coved rubber base with matching end stops and preformed internal and external corners at all locations where adjacent to rubber flooring products.

8. Straight vinyl base at carpeting.

9. Rubber floor tile at elevator cab.

10. Epoxy joint filler with a primer and a moisture-resistant patching underlayment skim coat at floor concrete controls joints to be covered by products specified herein.

11. Adhesives complying with minimum relative humidity of 99% and a level of alkalinity (pH) not less than 8 or greater than 12.

B. Prepare new surfaces to properly receive the materials to be furnished and installed hereunder. Include sanding, cleaning, and installing mastic underlayment, as necessary, to ensure the specified level of tolerance and bonding of tile and base.

C. Test moisture content/relative humidity (RH) and alkalinity (pH) level of concrete slabs to receive finishes specified herein.

D. This Subcontractor shall furnish, install, and maintain in safe adequate condition all lifts, hoisting, staging and scaffolding that are necessary for the proper execution of the work of this Section.

E. Perform all cleaning and finishing of materials furnished and installed hereunder.

F. LEEDv4-S Requirements:

1. The work of this section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEEDv4-S Certification at “Silver” Level is an Owner Requirement that is critical to secure project funding from the Massachusetts School Building Authority. LEEDv4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.

2. For all adhesives and sealants, meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

3. For all flooring systems, meet the LEED-S requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

4. For all paints and coatings such that they meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

5. Meet the LEEDv4-S requirements for MR Credit 4, Building Product Disclosure and Optimization – Health Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers' product documentation for each product having a Health Product Declaration (HPD).

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be performed under the designated SECTIONS:

1. New concrete slabs including floor leveling to comply with industry flatness standards: SECTION 033000-CAST-IN-PLACE CONCRETE.

2. Edging for carpeting: SECTION 096816-CARPETING.

3. Carpeting and entry mat moisture mitigation: SECTION 09816-CARPETING and SECTION 124813-MATS, respectively.

4. Elevator wall and ceiling finishes and elevator flooring substrate: SECTION 140001-ELEVATORS.

5. Polyethylene membrane barrier at wood flooring of gym and stage: SECTION 096466-WOOD AND ATHLETIC FLOORING.

6. Unit prices for moisture mitigation where RH is greater than 99% and/or pH is less than 8 and/or greater than 12: SECTION 012200-UNIT PRICES.

1.04 INSTALLATION QUALITY ASSURANCE

A. Work under this SECTION shall be performed by a resilient flooring installation firm certified by the resilient flooring manufacturer and qualified by experience and in a financial position to do the work specified hereunder.

B. Submit, with transmission of initial samples required, the following:

1. Experience record showing the resilient flooring installation firm's training and experience in similar work.

2. List and give brief description of similar work, satisfactorily completed, with location, date of contracts, together with names and addresses of owners.

3. List of facilities and equipment available to do the work.

4. Letter from tile manufacturer certifying the installation firm is an approved installer of the submitted product

C. The resilient flooring installer shall be experienced in the supervision of resilient flooring installation in this type of work. The actual work shall be done by qualified and experienced mechanics working under his supervision or under the supervision of an experienced workroom supervisor.

D. The Architect reserves the right to reject the resilient flooring installation firm if (1) the required qualification data is not received, or (2) the data submitted indicates an unsatisfactory experience record.

E. In the event of conflicts between the Contract Drawings, the manufacturer's standards, and this specification SECTION, the more stringent requirements shall govern.

F. The resilient flooring installer shall be certified by the Manufacturer.

G. Prepare new surfaces to properly receive the materials to be furnished and installed hereunder to ensure the specified level of tolerance and bonding of tile.

1.05 GUARANTEES

A. In addition to the manufacturer's wear warranties specified herein, upon completion of the work, submit to the Architect, for transmission to the Owner, two (2) copies of a written guarantee, covering prompt and proper replacement and repair of any and all improper work and material that may become apparent within 12 months after the date of substantial completion under which the work is performed.

1.06 SUBMITTALS

A. Submit the following samples in accordance with the requirements of SECTION 013300-SUBMITTALS.

1. Manufacturer's standard samples of rubber flooring, rubber base adjacent to rubber flooring, linoleum flooring and vinyl bases in available colors for selection by the Architect.

a. For linoleum tile, furnish full sized tiles of each of the selected tile colors. Up to 10 colors shall be selected.

b. For rubber submit one full sized tile in selected colors.

2. Product Data: Submit complete manufacturer’s product data for materials specified herein including manufacturer’s complete installation instructions.

3. Relative humidity (RH) and alkalinity (pH) test data submitted a minimum of 45 calendar days prior to any installation of resilient flooring.

B. Qualifications:

1. Resilient Flooring Subcontractor shall have a master mechanic or associate mechanic on his staff. As part of the submittal process, submit master mechanic or associate mechanics credentials.

C. LEED for Schools Submittals (Refer to SECTION 013300-SUBMITTALS):

1. Relevant supporting documentation required by LEED for Schools v4 and as detailed in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
2. A completed LEED MATERIALS REPORTING FORM, per SECTION 018113-SUSTAINABLE DESIGN REQUIIREMENTS.
3. Product substitution requests are subject to additional LEED-S submittal requirements; see SECTION 012500 – SUBSTITUTION PROCEDURES.

D. Resilient flooring and base required for Sample Classroom as specified under SECTION 013300-SUBMITTALS, Article 1.10.

1.05 ADDITIONAL MATERIALS

A. Upon completion of the resilient flooring work, furnish to maintenance representative of the Owner, the following materials for future maintenance replacement:

1. One half (1/2) case of rubber flooring of each color and type used.
2. Forty (40) lineal feet of base, in each color used.
3. One half (1/2) case of each modular composite tile used in each color and each size.

B. Additional materials shall be taken from the same manufacturer's run used on the project, to avoid possible deviation in colors.

1.06 PRODUCT DELIVERY, STORAGE AND HANDLING

A. All materials shall be delivered in their original unopened packages and protected from exposure to the elements.

B. Damaged or deteriorated materials shall be removed from the premises.

C. Liquid materials shall be stored at a temperature not less than 45 degrees F.

1.07 PRE-FLOORING CONFERENCE

A. Before concrete slabs on deck and slabs on grade are placed, and after approval of all resilient flooring materials, a pre-flooring conference shall be held at the job site. In attendance shall be (1) Architect, (2) General Contractor, (3) Concrete Subcontractor, (4) Resilient Flooring Subcontractor and (5) Flooring manufacturer’s representatives.

B. The parties shall review drawings, specifications and approved materials and coordinate concrete surface, curing, moisture requirements and moisture mitigation for the finish flooring materials.

C. Coordinate with adhesive manufacturer and Concrete Subcontractor for review and approval of concrete slab finish as part of the Pre-flooring Conference.

PART 2 PRODUCTS

2.00 LEEDv4-S REQUIREMENTS

A. Products and materials used for this section of the work are required to meet the following criteria for LEEDv4-S Materials Credits, and a completed LEEDv4-S Materials Reporting Form shall be submitted for all materials in this SECTION:

1. Recycled Content. (See Section 018113 Sustainable Design Requirements for overall project recycled content requirements.) The General Contractor shall examine each product or material specification below for a stated minimum recycled content requirement, and if none is stated, the requirements under 018113 shall govern.
2. Regional Content. (See Section 018113 Sustainable Design Requirements for overall project regional content requirements). The General Contractor shall examine each product or material specification below for a stated minimum regional content requirement, and if none is stated, the requirements under 018113 shall govern.
3. Furnish all flooring materials and all associated adhesives/sealants and paints/coatings such that they meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in Section 018113-SUSTAINABLE DESIGN REQUIREMENTS.
4. For all adhesives and sealants, meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in Section 018113-SUSTAINABLE DESIGN REQUIREMENTS.
5. Furnish any paints and coatings such that they meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in Section 018113-SUSTAINABLE DESIGN REQUIREMENTS.

2.01 SYNTHETIC RUBBER FLOORING

A. Manufacture

1. To establish a standard of quality, construction and color selection, manufacture has been based upon NORA FLOORING, Madison, Wisconsin.
2. Similar flooring and base by Johnsonite, Mannington or others will be considered for approval by the Architect, upon receipt of adequate supporting data and samples.

B. Materials

1. Flooring material shall be 46% rubber. There shall be no reground rubber, natural rubber, course fillers or sand in the content of the floor. The rubber floor shall perform as follows:
   a. Shore hardness “A” – ASTM D-2240 ≥ 85 psi.
   b. Slip resistance – ASTM D 2047 > 0.6.
   c. Flammability – ASTM E648, E662, Class 1, < 0.45 watts/cm.

d. Resistance to Abrasion (Taber Abrasion) - Caliber H-18 wheels, 500 grams/1000 cycles, not greater than .4 grams weight loss.

2. Flooring at all stairs shall be “Norament 825C’ tile with hammered texture, smooth back. Tile size one half meter square x 3 mm thick.

3. Step tread shall be one piece for nosing-tread-riser with a smooth color contrasting insert – NORA “Visually Impaired Strips”; Mohawk “Visually Impaired”; Johnsonite “Striping Solutions” or approved equal – at the edge of the tread, extending fully between stringer. Rubber base shall be used adjacent to all rubber flooring.

4. Colors shall be as selected by Architect from manufacturer’s full range of available textures and finishes. A maximum of two colors shall be used.

5. Leveling Materials – Skim coat finish for trowel application from feather edge to ½ inch maximum thickness (Ardex Feather Finish or approved equal) as recommended by the manufacturer(s) for the various conditions of the surfaces.

C. Miscellaneous Materials

1. As specified under 2.02, C.

2.02 LINOLEUM COMPOSITE TILE (LCT)

A. Manufacture

1. To establish a standard of quality, construction and color selection, manufacture has been based upon Forbo, Marmoleum “Modular Tile”, Hazelton, PA.

Linoleum floor tile of comparable quality and color range by Johnsonite (Harmonium), Green Floors Linoleum Flooring or other manufacturers will be considered for approval by the Architect upon receipt of adequate supporting data and samples.

a. Tile shall be 2.5 mm thick. Modular tile shall be 20 in. x 20 in., ~~10 in. x 20 in. and 10 in. x 40 in. (plank)~~ in patterns as shown on drawings.

b. Up to ten colors shall be selected by the Architect. Colors shall be selected from the full range of available colors.

c. Tile patterns and number of colors used in each space shall be as shown on Drawings 5.5.01, 5.5.02 and 5.5.03.

B. Materials

1. Linoleum tile shall be a homogeneous floor covering made of primarily natural materials consisting of linseed oil, wood flour, rosin binders, dry pigments mixed and calendared onto a polyester backing, and shall have an occupancy ready finish (meaning the floor shall not require any initial coats of finish). The linoleum tile shall perform as follows:

a. Reference Specification: Meets or exceeds all technical requirements of ASTM F2195.

b.	Slip resistance:	Meets or exceeds .6 for flat surfaces (dry surface) (ASTM D2047).
c.	Fire resistance:	ASTM E-662/ NFPA 258-450 or less ASTM E-648/ NFPA 253 – Class I
d.	Castor resistance:	Suitable for office chairs with castors (EN 425)

C. Miscellaneous Materials

1. Tile reducers, floor transitions and thresholds – 1/8-inch thick by 1 inch wide as manufactured by Johnsonite, Roppe Corporation, Flexco, or an approved equal.
2. Bases – Vinyl, coved and straight, 4 in. and 6 in. high and as shown on the drawings, 1/8-inch wall thickness, in colors as selected by the Designer, furnished with pre-moulded corners and matching end stops wherever ends of base are exposed to view. Bases shall be manufactured by Johnsonite, Roppe Corporation, Flexco or an approved equal. Base shall be supplied in continuous rolls of 120 feet or greater. Provide base in 6 in. or taller sizes as called for at specific details on the Drawings. Provide 6 in. base trimmed to fill space below tile and wood wainscots at all locations where distance between finish floor and bottom of wainscot is greater then 4 in.
3. Leveling Materials – Skim coat finish for trowel application from feather edge to ½ inch maximum thickness (Ardex Feather Finish or approved equal) as recommended by the manufacturer(s) for the various conditions of the surfaces.
4. Floor Finish – Provide if recommended by the manufacturer(s) whose flooring is used**.**

2.03 QUIET ROOM PADDED RESILIENT FLOOR COVERING

A. Product Characteristics

1. To establish a standard of quality, design and function, the specification and Drawings are based on 3/8 inch thick Heavy Duty Rubber Rolls as manufactured by Rubber Flooring Inc., Mesa, AZ. Similar padded floor covering by American Floor Mats, Rockville, MD, Shaw Flooring and others will be considered for approval by the Architect upon receipt of adequate supporting data and samples.
2. Characteristics of Flooring
   a. Flooring shall be provided in a minimum 4 ft. – 0 in. width, available in roll form so as to minimize the seams required. No cross seams allowed.
   b. Flooring shall be hydroscopic and have a durable wear surface.
   c. Wear surface shall have pebble grain finish and be available with a minimum 1/8 in. wear layer thickness.
   d. Top grade resilient sponge backing: Inorganic by reducing agents, detergents, alcohols, mineral oil, amines and aldehydes.

i. Foam cushion: ± 3/8 in., minimum

ii. Density: 14 lb./ft.^{3}

iii. Tensile Strength: 75 lb./in.^{2} ASTM D412

iv. Tear: 15 lb./in. minimum ASTM D1004

e. Flooring shall resist tearing and chemical degradation.

B. Installation shall be by manufacturer's recommended methods. All side seams shall be adhered to the subflooring.

C. Miscellaneous Materials:

1. Stainless steel transition threshold at doorsills, flush with adjacent floor finishes (LCT): Schluter Schiene E series (E160, E200)
2. Cementitious floor leveling as required to bring padded floor flush with adjacent finishes.
3. As specified under 2.02.C.

2.04 BASE AT NON-RESILIENT FLOORS

A. Coved resilient and straight resilient base as called for on Room Finish Schedule shall be as specified under 2.02, C.2.

2.05 ADHESIVES

A. Adhesives– as recommended by the respective Flooring Manufacturers and in compliance with:

1. Relative humidity (RH) up to 99%.
2. Alkalinity (pH) range not less than 8 or greater than 12.

B. **Base Contract (Adhesive**) – Manufacturers shall be compatible with products provided herein and be one of the following or an approved equal:

1. "EZ-On 100" adhesive (by Forbo International)
2. "Magellan XPA" adhesive (by LJM Technologies)
3. "AquaFlex" adhesive (by Formulators, Inc.)
4. "EnviroStix" adhesive (by Base King, Inc.)
5. Other manufacturers of similar moisture mitigation system / product / adhesives meeting SCAQMD, Rule 1168 for low VOC adhesives will be considered as an equal upon receipt of adequate supporting data and performance criteria.

C. Limitation

1. Only one product as noted in paragraph B, above, is allowed for each concrete slab condition. (Clarification: Mixing and matching products and systems within each paragraph is not allowed.)

2.06 EPOXY CONTROL JOINT FILLER

A. Product Characteristics:

1. To establish a standard of quality, design and function, the specification and Drawings are based on “Ardex MRF” by Ardex America. Similar moisture resistant patching underlayment coating products by others will be considered for approval by the Architect upon receipt of adequate supporting data and samples.

.

PART 3 EXECUTION

3.01 MOISTURE CONTENT OF CONCRETE SLABS

A. Monitor Moisture Content of Concrete Slabs

1. Monitor moisture content of new concrete floor slabs to receive floor finishes to verify that moisture control procedures are sufficient to dry slabs sufficiently to permit floor finishes to be installed.

2. Continuously monitor relative humidity and moisture content of floor slabs starting after curing of concrete is complete. Perform the following procedures at least once every two weeks, increase frequency to once per week for the month prior to floor finish installation.

   a) Perform a hydrous calcium chloride test, ASTM F 1869.

   b) Perform relative humidity test using in situ probes, ASTM F 2170.

3. **Conduct minimum of one test for each 5000 sq. ft.** of floor area or more frequently when drying rate is slower than anticipated.

3.02 PRE-INSTALLATION CONDITIONS

A. Inspect all surfaces and assure that they are in proper condition to receive work to be performed under this SECTION. The starting of work in any space shall be construed as acceptance of such surfaces as being satisfactory, and any defects to the work resulting from such accepted surfaces shall be corrected under the scope of this SECTION.

B. Fill all minor cracks in sub-floors with mastic and/or leveling compound as recommended by the tile manufacturer.

C. A temperature of not less than 70 degrees shall be maintained for not less than 48 hours before commencing installation of resilient materials and continued 48 hours after completion.

D. No work shall start until samples have been submitted to and approved by the Architect. All material shall be labeled, stating colors, locations, type of adhesive and primer (if required), and the areas in which materials are to be used.

3.03 INSTALLATION

A. Wet adhesives shall be applied following recommendations of the manufacturer.

B. Follow additional manufacturer recommendations for the installation of sheet rubber flooring.

C. Sub floor preparation, including installation of moisture mitigation system and leveling materials as recommended by the respective resilient flooring material manufacturers.

1. The Resilient Flooring Subcontractor shall be responsible for furnishing and installing leveling materials as recommended by respective manufacturers for the various substrate conditions resulting in smooth, feathered changes in plan.

2. Concrete subfloor preparation, including leveling to be performed under this SECTION, shall include but is not limited to the following:

   a. Filling of minor cracks and imperfections in new concrete subfloors and blending of dissimilar subfloor conditions, in area to receive resilient flooring and walk-off mats under SECTION 124813-MATS.

D. Resilient flooring shall extend under all equipment shown on the Contract Drawings and into the wall lines, unless otherwise noted on the Contract Drawings. Resilient flooring shall be carried to fit neatly into breaks and recesses, against non-resilient bases, around pipes, and under saddles. Floors shall not be subjected to traffic until adhesive is dry and hard (approximately 24 hours).

E. Adhesive shall be applied using a notched steel trowel (3/32 x 3/32 x 18 inch size) following recommendations on the adhesive label.

F. Follow additional manufacturer recommendations for the installation of rubber flooring.

G. Installation of resilient base:

1. Both cove and straight, use roll materials. Plan for seams only at inside corners. Where seams are required for runs in excess of roll capacity (120 feet), place seam at least conspicuous location. Hide seams at backs of columns or aligned with changes of wall finish above. Manage material such that there are no seams in any straight run less than the roll length (120 ft.). Where seams permitted in longer runs, no segment shall be less than 10 ft.

2. Additionally, at cove base only: use pre-molded corners at all outside corners. Deformed base at corners will not be accepted. Use preformed end caps at all locations where end of cove base transitions to other (PCT, QT, wood) base, or ends.

3.05 CLEANING OF FLOORING

A. Clean all resilient flooring as recommended by their respective flooring manufacturers.

END OF SECTION

SECTION 090007

PAINTING

*(Filed Trade Sub-Bid Required)

PART 1 GENERAL

1.00 TIME, MANNER AND REQUIREMENTS FOR SUBMITTING TRADE SUB-BIDS

A. Trade Sub-bids shall be submitted in accordance with provisions of the General Laws (Ter. Ed.), Chapter 149, Section 44A to 44L, inclusive, as amended. The time and place for submission to Sub-Bids shall be set forth under INSTRUCTIONS TO BIDDERS.

B. Each Trade Sub-Bid filed with the Awarding Authority must be accompanied by BID BOND, or CERTIFIED CHECK, or a TREASURER'S CHECK or CASHIER'S CHECK issued by a responsible bank or trust company, payable to the **City of Amesbury** in the amount stipulated in the INSTRUCTIONS TO BIDDERS. A Trade Sub-Bid accompanied by any other form of bid deposit than those specified will be rejected.

C. Each Trade Sub-Bid submitted for the work, under this SECTION, shall be on a form furnished by the Awarding Authority and required by SECTION 44F of Chapter 149 of the General Laws, as amended.

D. Work to be done under this SECTION is shown on Contract Drawings numbered:

G.0.01, G.0.02, G.0.04-G.0.08, inclusive; 2.1.00-2.8.03, inclusive; 3.4.01-3.9.15, inclusive; 4.1.01-5.4.11, inclusive; 5.6.01-5.6.13, inclusive; 6.1.00-6.2.01, inclusive; 7.4.01-7.4.03, inclusive; 8.4.01-8.5.03, inclusive; 9.4.01-9.6.01, inclusive; 9.7.01-9.7.07, inclusive; and 10.0.01-10.3.13, inclusive.

Remaining Contract Drawings are included for reference and coordination.

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a sub-bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Perform the following items of work as shown on the Contract Documents.

1. Examine the various trade SECTIONS of the PROJECT MANUAL and be thoroughly familiar with all provisions regarding painting and finishing work included therein.
2. Refer to the Room Finish Schedule and other Contract Drawings for various surfaces required to be painted or finished.

3. Apply specified finish coats of paint to all pre-primed work and complete finishing system to unprimed work required to be painted or finished hereunder.

4. Prime and paint galvanized metal frames and doors, and galvanized steel exposed to view.

5. Backprime, with new specified first coat material, all surfaces of new finish and wood trim which will be concealed after installation.

6. Clean, and properly prepare to receive paint and finishing materials, all salvaged items designated on the Contract Drawings and/or specified hereunder to be painted.

7. Exposed to view MEP/FP systems unless otherwise noted.

8. Exposed to view structural steel members and metal decking.

9. Clean, and properly prepare to receive paint and finishing materials, all existing surfaces and items designated on the Contract Drawings and/or specified hereunder to be painted.

10. Prime and paint substrate behind interior phenolic panels flat black.

B. This subcontractor shall furnish, install and maintain in safe adequate condition all lifts, hoisting, staging and scaffolding that are necessary for the proper execution of the work of this SECTION.

C. LEEDv4-S Requirements:

1. The work of this section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEEDv4-S Certification at "Silver" Level is an Owner Requirement. LEEDv4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.

2. For all paints and coatings, meet the LEED requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

3. Meet the LEEDv4-S requirements for MR Credit 4, Building Product Disclosure and Optimization – Health Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers' product documentation for each product having a Health Product Declaration (HPD).

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be performed under the designated SECTIONS:

1. Shop priming and touch-up of structural steel: SECTION 051200-STRUCTURAL STEEL.

2. Shop priming and touch-up of miscellaneous and ornamental iron: SECTION 050001-MISCELLANEOUS AND ORNAMENTAL IRON.

3. Shop priming and touch-up of miscellaneous metals: SECTION 055000-MISCELLANEOUS METALS.

4. Prefinished hardwood trim and prefinished millwork: SECTION 062000 – FINISH CARPENTRY.

5. Primed and galvanized hollow metal frames and doors: SECTION 081113-HOLLOW METALWORK

6. Prefinished wood doors – SECTION 081416 – WOOD AND PLASTIC DOORS.

7. Stenciling above ceilings for partition ratings: SECTION 092116-GYPSUM WALLBOARD.

8. Dry erase primer and coating system applied to GWB: SECTION 099737-DRY ERASE COATING.

B. The following items of work do not require painting or finishing under this SECTION 090007-PAINTING.

1. Prefinished items.

2. Prefinished aluminum, plain and lead coated copper and stainless steel, except as otherwise specifically noted on the Drawings to receive paint.

3. Concealed from view items and surfaces, except as specified hereunder, and equipment and ducts in mechanical rooms.

4. Exterior masonry.

5. Exterior and interior concrete surfaces, except where specifically designated on the Drawings to receive paint.

6. Prefinished wood doors and hardwood trim.

7. All natural, prefinished wood casework, millwork, paneling and wood trim.

8. GWB walls where dry erase coating is called for on the Drawings. Do not paint or prime these walls.

1.04 SUBMITTALS

A. Submit the following samples in accordance with the requirements of SECTION 013300-SUBMITTALS.

1. Sample boards of all colors and types of paint proposed for the project. Colors shall be selected by the Architect.

2. Samples of finishing system applied to the specified species of wood trim where specified hereunder to receive natural finish, for selection and approval by the Architect.

B. LEED for Schools Submittals (Refer to SECTION 013300-SUBMITTALS):

1. Relevant supporting documentation required by LEED for Schools v4 and as detailed in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

2. A completed LEED MATERIALS REPORTING FORM, per SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

3. Product substitution requests are subject to additional LEEDv4-S submittal requirements. Refer to SECTION 012500-SUBSTITUTION PROCEDURES.

1.05 COLORS

A. Color scheme shall be in accordance with schedules provided by the Architect and all tinting and matching shall be to the satisfaction of the Architect. Up to 20 paint colors shall be used. The Architect reserves the right to select multiple paint colors on any given surface, using natural breaks (change of plane, material, control joint) as the color break.

B. Provide all facilities for comparison and adjustment of colors, and place final samples for approval directly on the surface to be finished. Machine mixing by the manufacturer's representative shall be permitted where advantageous, but only after final approval of colors by the Architect.

C. After completion of all painting work, submit to the Owner, one unopened gallon of each type and color of all paints and enamels used, taken from the same job-run as those used on the project, with manufacturer's name and his designation of the paint and color for the purpose of future re-ordering of paint. Submit to the Architect a signed receipt stating that the Owner has taken possession of the additional painting materials.

1.06 PROTECTION

A. Furnish and lay drop cloths in all rooms and areas where painting and finishing is being done to adequately protect flooring and other work from damage during painting.

B. Remove all canopies of light fixtures, all electric switch plates, and similar equipment, and set them carefully aside and cover adequately to protect the fixtures and replace the canopies, plates, and miscellaneous equipment in as good condition as when found.

C. Materials shall be stored only where directed. Oily rags and waste must be removed from the building at the end of each working day, and under no circumstances allowed to accumulate.

D. All paint surfaces damaged during the progress of the work shall be repainted between natural breaks in surfaces and only as approved by the Architect. The Painting Subcontractor shall see that all other work in a room is completed before starting his painting, except as directed by the Architect.

E. No plumbing fixture or drain shall be used for the mixing or disposal of any refuse material or for washing brushes and other painting utensils.

PART 2 PRODUCTS

2.00 LEEDv4-S REQUIREMENTS

A. Products and materials used for this section of the work are required to meet the following criteria for LEEDv4-S materials Credits, and a completed LEED v4-S MATERIALS REPORTING FORM shall be submitted for all materials in this SECTION:

1. Furnish any paints and coatings such that they meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

2.01 APPROVED MATERIALS

A. Before purchasing materials for the work, submit to the Architect a list of the products proposed for use. No commitment for the purchase of materials prior to the written approval by the Architect.

B. All materials shall be delivered to the building in unopened original containers bearing the manufacturers labels.

2.02 MATERIALS

A. General – All paints for gypsum wallboard surfaces in wet areas (kitchens, toilets, janitor / custodian closets, service areas, mechanical rooms) shall have:

1. Non-bacterial additive if not included in the paint product.
2. If included in the paint product provide documentation of the non-bacterial agent.

B. Interior Work for New Surfaces (Refer to Drawings for applicability.)

1. Galvanized metal doors and galvanized pressed steel frames exposed to view on the interior.
   a. Same as exterior galvanized metal doors and frames.
2. Metal doors, hollow metal steel frames and doors, metal handrails, exposed-to-view surfaces of steel lintels, exposed structural steel, including all AESS beams, columns and trusses, and all other ferrous metals which are exposed to view on the interior.
   a. Two coats:

      Benjamin Moore – Ecospec Interior Latex Semi-Gloss 376)

      Sherwin Williams – ProMar 200 Zero VOC Interior Semi-Gloss (B31W02651)

      PPG – Pure Performance Latex Semi-Gloss

      Glidden – Professional Utlrahide No VOC Semi-gloss (1415)

b. Hollow metal frames and door finish shall be spray applied.

3. Vertical surfaces of gypsum board

   a. First Coat:

      Benjamin Moore – Ecospec Interior Latex Primer Sealer (372)

      Sherwin Williams – ProMar 200 Zero VOC Interior Latex Primer (B28W02600)

      PPG – Pure Performance Primer

      Glidden – Professional Lifemaster No VOC Primer (9116)

   b. Two coats:

      Benjamin Moore – Pristine Ecospec Interior Latex Eggshell (374)

      Sherwin Williams – ProMar 200 Zero VOC Interior Latex Eg-Shel (B20W12651)

      PPG – Pure Performance Latex Eggshell

      Glidden – Professional Ultrahide No VOC eggshell (1411)

4. Gypsum board ceilings and soffits.

   a. First Coat:

      Benjamin Moore – Ecospec Interior Latex Primer Sealer (372)

      Sherwin Williams – ProMar 200 Zero VOC Interior Latex Primer (B28W02600)

      PPG – Pure Performance Latex Primer

      Glidden – Professional Lifemaster No VOC Primer (9116)

   b. Two coats:

      Benjamin Moore – Pristine Ecospec Interior Latex Flat (373)

      Sherwin Williams – ProMar 200 Zero VOC Interior Latex Flat (B30W12561)

      PPG – Pure Performance Latex Eggshell

      Glidden – Professional Ultrahide No VOC flat (1209)

5. Exposed-to-view uncovered metal ducts, metal conduits, uncovered cold piping, and all hangers therefore, except in mechanical rooms, and other concealed-from-view areas.

   a. First coat for galvanized items only prior to finish coats:

      Benjamin Moore – Ecospec Interior Latex Primer Sealer (372)

      Sherwin Williams – Pro Industrial Pro-Cryl Universal Acrylic Primer (B66W01310)

      PPG – Pure Performance Latex Primer

Glidden – Professional Lifemaster No VOC Primer (9116)

b. Two coats:

Same paint specified herein for adjacent surfaces

6. Concrete and concrete masonry unit walls.

a. First coat:

Benjamin Moore – Ecospec Interior Latex Primer Sealer (372)

Sherwin Williams – SW Prep Rite Interior/Exterior Latex Block Filler (B25W00025)

PPG – Pure Performance Latex Primer

Glidden – Professional Lifemaster No VOC Primer (9116)

b. Two coats:

Benjamin Moore – Ecospec WB Semi-Gloss (376)

Sherwin Williams – ProMar 200 Zero VOC Latex Semi-Gloss (B31W02651)

PPG – Pure Performance Latex Semi-Gloss

Glidden – Professional Ultrahide No VOC Semi-Gloss (1415)

7. Wood trim for painted finish.

a. First coat:

Benjamin Moore – Ecospec Interior Latex Primer Sealer (372)

Sherwin Williams – ProMar 200 Zero VOC Interior Later Primer (B28W02600)

PPG – Pure Performance Latex Primer

Glidden – Professional Life Master no VOC Primer (9116)

b. Two coats:

Benjamin Moore – Ecospec Interior Latex Semi-Gloss (376)

Sherwin Williams – ProMar Zero VOC Latex Semi-Gloss (B31W02651)

PPG – Pure Performance Latex Semi-Gloss

Glidden – Professional Ultrahide No VOC Semi-Gloss (1415)

8. Concrete and concrete masonry units for epoxy glazed wall finish (GWF).

a. First coat:

PPG – Pure Performance Latex Primer Sealer (372)

Sherwin Williams – SW Prep Rite Interior/Exterior Block Filler (B25W00025)

b. Second coat:

PPG – Pitt-Glaze WB Acryllic Epoxy 16-510 (semi-gloss)

Sherwin Williams – Pro Industrial Water Based Epoxy Eg-Shel (B73W00361)

c. Third Coat:

PPG – Pitt-Glaze WB1 Acryllic Epoxy 16-510 (semi-gloss)

Sherwin Williams – Pro Industrial Water Based Epoxy Eg-Shel (B73W00361)

9. Vertical and horizontal surfaces of gypsum board for epoxy glazed wall finish (GWF).

a. First coat:

Prime per manufacturer's recommendations for substrates

b. Second coat:

PPG – Pitt-Glaze WB Acryllic Epoxy 16-510 (semi-gloss)

Sherwin Williams – Pro Industrial Water Based Epoxy Eg-Shel (B73W00361)

c. Third Coat:

PPG – Pitt-Glaze WB Acryllic Epoxy 16-510 (semi-gloss)

Sherwin Williams – Pro Industrial Water Based Epoxy Eg-Shel (B73W00361)

10. Exposed-to-view structural steel (EVSS) metal roof and floor deck (two coats):

a. Sherwin Williams – Pro Industrial Hi Performance Acrylic, Semi-Gloss Finish (B66W00651).

b. Kelly-Moore – 5885 DTM High Performance Semi-Gloss Enamel

c. Benjamin Moore – UltraSpec HP 25 low luster enamel < 145g/l.

NOTE: DO NOT FILL PERFORATIONS IN ACOUSTIC DECK WITH PAINT.

11. Concrete floors:

Surface Preparation and Application – per manufacturer's recommendations for concrete floors, including filing cracks prior to painting. (Two coats)

a. PPG – Pitt-Glaze WBI Semi-Gloss Water Borne Epoxy

b. Sherwin Williams – FPLX 8100 (B70W08161)

c. or an approved equal meeting IEQ requirements.

12. Fibrous wood acoustic panels:

    a. First coat (spray applied)

       Benjamin Moore – Ecospec Interior Latex Primer Sealer (372)

       Sherwin Williams – Pro Mar 200 Zero VOC Interior Latex Primer (B28W2600)

       PPF – Pure Performance Latex Primer

       Glidden – Professional Lifemaster No VOC Primer (9116)

    b. Three coats (Spray coats – minimum 2.0 mil dry film thickness per coat.)

       Benjamin Moore – Ecospec Interior Latex Eggshel (374)

       Sherwin Williams – Pro Mar 200 Zero VOC Interior Latex, Eggshell (B20W1265)

       PPG – Pur Performance Latex Eggshell

       Glidden – Professional Ultrahide No VOC Eggshell

C. Exterior Work for New Surfaces

1. Metal doors, pressed steel frames and all other galvanized and non-galvanized ferrous metals that are exposed to view and designated to be painted.

    a. Surface preparation for galvanized steel items not previously factory primed including, but not limited to, galvanized deck.

       SP 1 wash and mechanically abrade surface.

    b. First coat: (spray applied)

       TNEMEC – Series 27 epoxy primer

       Kelly-Moore – DTM 5725 Primer/Finish

       Dunn-Edwards – Ultra-Grip Select UGSL00

       Sherwin Williams – PI Procryl Primer (B66W01310)

    c. Second coat: (spray applied)

       Kelly-Moore – 5885 High Performance Acrylic Semi-Gloss Enamel

       PPG – Pitt-Tech Plus Interior/Exterior Semi-Gloss Industrial Enamel

       Sherwin Williams – ProIndustrial DTM Acrylic Semi-Gloss (B66W01151)

PART 3 EXECUTION

3.01 ACCEPTANCE OF SURFACES

A. Inspect all surfaces and assure that they are in proper conditions to receive work to be performed under this SECTION. Any questions as to the proper performance of the various paint systems specified herein shall be brought to the Architect's attention no later than 15 calendar days prior to the date of commencing work, otherwise, the Painting Subcontractor shall assume the responsibility for providing the desired results.

B. The commencement of work in any space by the Painting Subcontractor shall be construed as acceptance of the surfaces as being satisfactory, any defects to his work resulting from such accepted surfaces shall be corrected by him at his own expense.

C. If the existing surfaces cannot be put in proper condition to receive paint by customary cleaning methods, or sanding, furnish and install necessary bonding agents, and/or other preparation required to ensure proper application and performance of the painting and finishing materials, and include the costs for same in the base bid for the work of this SECTION.

3.02 WORKMANSHIP

A. Perform all work with skilled mechanics under adequate supervision.

B. Apply all materials under adequate illumination, evenly spread, and smoothly flowed on without runs, sags, or holidays.

C. Do no work in the rain, dew, or fog, when the temperature is below 50 degrees F., or before the other finish materials have been thoroughly dried out.

D. Clean all surfaces to be painted free of loose dirt and dust before painting is started. Remove all pealing or scaling paint from existing surfaces by sanding and scraping.

3.03 SURFACE PREPARATION

A. New wood and plywood to be painted.

1. Minor defects shall be made smooth by sanding and/or by the use of steel wool.
2. Wash sap spots and knots with mineral spirits. When dry, touch-up spots and knots with white shellac.
3. Fill up nail holes, cracks, and similar imperfections with lead putty or plastic wood after primer of first coat of finish is dry.

B. New ferrous metals:

1. Remove rust and all foreign materials down to bright metal by wire brushing, scraping, and sanding. Spot prime bare metal with exterior or interior alkyd base metal primer, as applicable. Use only rust-inhibiting type primer for exterior metal priming.

2. Remove all grease or dirt with mineral spirits before applying the paint.

C. **Galvanized metal** – All galvanized metal surfaces shall be chemically treated with copper sulfate or with a compound made for this purpose in accordance with the manufacturer's directions, after applying the first coat of paint.

D. New gypsum board and plaster:

1. Sand smooth any rough spots in gypsum board compound surfaces and plaster and seal before application of first coat.

2. Touch-up all suction spots of plaster and compound surfaces (hot spots) after the application of the first coat before applying the second coat to produce an even result in the finish coat.

3.04 APPLICATION

A. Apply all materials in accordance with the manufacturer's specific recommendations, coverage rates, thinning no more than the recommended amount. Assure that all materials are free from skinning, lumps or any foreign matter and keep well stirred during application.

B. Evenly brush out each finish coat and permit to dry at least 24 hours before applying any subsequent coats.

C. Make each coat a different tint from that of the preceding coat, with final coat tinted to the exact shade selected by the Architect. Lightly sand surfaces between each coat and wipe clean.

D. Apply one coat of metal primer, of the types specified hereunder, and one coat of flat black metal enamel, to the surfaces of all new duct-work behind grilles, for a distance of 18 inches.

E. Perform all required back-priming work before items are installed.

3.05 SPRAY PAINTING

A. Spray painting, utilizing power equipment, may be allowed by the Architect subject to the following conditions:

1. ***The Painting Subcontractor must obtain from the Architect written approval prior to the commencing of any spray painting***. All surfaces spray painted without the Architect's prior written approval shall be considered as unpainted surfaces subject to the full requirements of this SECTION. If approved, all spray applied coats must be back rolled.

2. The Architect reserves the right to revoke authorization to spray paint, if in the Architect's sole judgment, the quality of the paint finish is unacceptable or if proper safeguards have not been taken to protect adjacent surfaces.

3.06 COMPLETION

A. Cleaning – At the completion of the work, remove all paint spots and oil or grease stains, caused by this work from floors, walls, fixtures, hardware and equipment, leaving the finishes in a satisfactory condition. Remove all materials and debris and leave the site of the work in a clean condition so far as this work is concerned.

B. Final inspection – Protect all painted surfaces against damage until the date of final acceptance of the work. The Architect will conduct a final inspection of all painters' work and the Painting Subcontractor will be required to repaint or retouch any areas found which do not comply with the requirements of this SECTION.

END OF SECTION

SECTION 092116

GYPSUM WALLBOARD

PART 1 GENERAL

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish and install the following items required to complete the work of this SECTION, as shown on the Drawings and specified herein.

1. Metal stud partition framing, including screw studs, stud tracks, bracing, gypsum board, control joints and accessories.
2. Suspended gypsum board ceilings and soffits including metal hangers, metal studs, carrying channels, furring channels, and gypsum board.
3. Drywall construction system for backing exterior masonry veneer, preformed metal panels, and rainscreen wall systems, including steel screw studs, stud tracks, gypsum wallboard, glass faced sheathing, fire rated exterior sheathing at exterior rated walls and all related items.
4. Gypsum board applied to metal studs and blocking as shown on the Drawings.
5. Drywall construction for various furring conditions indicated on the Drawings, including, as applicable metal furring channels, steel screw studs, stud tracks, and gypsum wallboard.
6. **All gypsum panels shall be mold resistant throughout**.
7. Cement backer board for interior ceramic tile walls.
8. Abuse resistant gypsum wallboard in stairwells (full height) and corridors (up to eight feet above finish floor).
9. All metal and flexible accessories including, but not limited to casing beads, corner beads, abuse resistant radius corner beads, column/beam clips as required in conjunction with the various gypsum board conditions indicated on the Drawings.
10. Miscellaneous gypsum board trim including decorative reveals and picture mold reveals.
11. Internal metal struts, bracing, supplementary framing, and reinforcing necessary to ensure complete stability within the various drywall construction systems.

12. All additional supplementary framing and bracing required for the support of concentrated loads imposed by light fixtures, access panels and other items indicated to be attached to, or hung from, gypsum board surfaces, except where indicated to be wood.

13. Compressible filler between stud tracks of interior partitions and adjacent surfaces.

14. Tape-joint finishing system for gypsum board surfaces including above finish ceilings.

15. Caulking and acoustical sealant, bead applied to legs of stud tracks of interior partitions, prior to application of gypsum board and where else indicated on the Drawings.

16. Firesafing and smoke stopping insulation where indicated on the Drawings.

17. All metal stud framing, furring, reinforcing, bracing, Z-girt channels, accessories and fastening systems shown on the drawings, unless otherwise specified.

18. Framing and wall sheathing of rooftop mounted mechanical doghouses including hardware, such as nails, bolts, screws and clips required.

19. Gypsum board shaft wall system, including gypsum liner panels and metal C-H studs and accessories.

20. Miscellaneous gypsum wallboard trim.

21. Stenciling above ceilings of all fire and smoke barrier wall assemblies (both sides).

22. Level 5 finish at stairwells and as indicated on the drawings and listed herein.

B. This subcontractor shall furnish, install, and maintain in a safe, adequate condition all staging and scaffolding that are necessary for the proper execution of the work of this SECTION.

C. LEEDv4-S Requirements:

1. Relevant supporting documentation required by LEED for Schools v4 and as detailed in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

2. A completed LEED MATERIALS REPORTING FORM, per SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

3. Meet the LEED requirements for IEQ Credit 2, Low-Emitting Materials and as defined in SECTION 018113 - SUSTAINABLE DESIGN REQUIREMENTS.

4. Meet the LEEDv4-S requirements for MR Credit 4, Building Product Disclosure and Optimization – Health Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers' product documentation for each product having a Health Product Declaration (HPD).

1.03 ITEMS TO BE INSTALLED ONLY

A. Install the following items furnished under the designated sections:

1. Access panels occurring in gypsum wallboard surfaces: By trade requiring same.
2. Installation of anchor clipping for metal door frames provided under SECTION 081113-HOLLOW METALWORK.
3. Unless otherwise noted, all insulation indicated within the stud systems for drywall construction, above soffits and ceilings: SECTION 072100-INSULATION.

1.04 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be performed under the designated SECTIONS:

1. Painting of gypsum board: SECTION 090007-PAINTING.
2. Wood furring, wood studs and framing, blocking for attachment of items to wall and ceiling construction, and other rough carpentry: SECTION 061000-ROUGH CARPENTRY.
3. Unless otherwise noted herein, woodwork, including plywood sheathing, indicated in conjunction with gypsum board: SECTION 061000-ROUGH CARPENTRY.
4. Fire retardant treated exterior plywood sheathing at mechanical doghouses: SECTION 061000-ROUGH CARPENTRY.
5. Through-wall flashing at exterior masonry veneer: SECTION 040001-MASONRY.
6. Continuous air and vapor barrier: SECTION 071326-AIR AND VAPOR BARRIERS.
7. Acoustical tile ceiling systems including edge trim over which gypsum board panels are installed: SECTION 090003-ACOUSTICAL TILE.
8. Finishing joints between panels and corner bead flanges in cement backerboard wall surfaces to receive ceramic and porcelain tile: SECTION 090002-TILE.
9. Dry erase coatings: SECTION 099737-DRY ERASE COATING.
10. Printed vinyl wall covering: SECTION 101400-IDENTIFYING DEVICES.

1.05 SUBMITTALS

A. Submit complete shop drawings in accordance with the requirements of SECTION 013300-SUBMITTALS and SECTION 012500-SUBSTITUTION PROCEDURES, as applicable.

B. Shop Drawings – Shop drawings shall include a complete layout, engineering and design calculations for all light gauge metal framing both exterior and interior, including but not limited to, exterior drywall back-up system, for light gauge framing at rooftop doghouses, interior partitions, suspended stud construction, gypsum wallboard ceilings, acoustic separation ceilings and framing of transom openings. Shop drawings shall be prepared and stamped by a structural engineer registered in the Commonwealth of Massachusetts. Shop drawings shall include stud arrangement, stud gauges and sizes, bracing, reinforcing and connection details. Indicate type, grade and manufacturer of all materials intended to be used.

C. Manufacturer's Data – Submit to the Architect copies of manufacturer's specifications and installation and application instructions for all herein specified, certified test results, recommendations for sealing penetrations and perimeters, and other data as may be required.

1. If a substitution of the specified product is proposed, the manufacturer shall provide documentation from a major testing laboratory that the product has successfully been tested in compliance with NFPA 285 in the designated wall assembly systems.
2. In the absence of such above documentation, the manufacturer of the proposed substituted product shall submit documentation that the product has been successfully tested in accordance with NFPA 285 as a component of a successfully tested NFPA 285 wall assembly.
3. In addition to Item 2, above, the proposed manufacturer of the substituted product shall engage a fire scientist to provide a written analysis of the design wall assembly concluding that the proposed substituted product, in the professional judgment of the fire scientist, shall meet the performance requirements of NFPA 285 for the design wall assembly systems.

D. Submit the following samples in accordance with the requirements of SECTION 013300-SUBMITTALS.

1. Metal stud – 12-inch length in each size and gauge required.
2. Gypsum wallboard – 4 inches x 6 inches, minimum, in each specified type and thickness.
3. Gypsum sheathing – 4-inch x 6 inches, in each specified type and thickness.
4. Cement backer board – 4 inches x 6 inches, minimum, in specified thickness.
5. Metal accessories and trims – 6-inch length of each type.
6. Caulking and sealant materials – complete data, no physical samples required.
7. Compressible filler – 6 inches x 6 inches x 1 inch thick, of specified type.

E. Mock-Up – Provide mock-up exterior wall panels as specified under SECTION 014339-EXTERIOR MOCK-UPS.

1. Final Mock-Up: Following the Architect's review and approval of the mock-up panel, including those portions of the panel furnished and installed under other SECTIONS, a final mock-up panel shall incorporate all approved materials, colors and methods of installation. This final Mock-up shall be left on site to serve as the reference standard for appearance and workmanship as the work progresses. This Subcontractor shall, at no additional cost to the Owner, rebuild the portions of the mock-up furnished and installed under this SECTION using the final approved materials, colors and construction to complete the final mock-up.

F. LEED for Schools Submittals (Refer to SECTION 013300-SUBMITTALS):

1. Relevant supporting documentation required by LEED for Schools v4 and as detailed in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
2. A completed LEED MATERIALS REPORTING FORM, per SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
3. Product substitution requests are subject to additional LEEDv4-S submittal requirements, see SECTION 012500-SUBSTITUTION PROCEDURES.

1.06 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer who has completed cold-formed metal framing similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

B. Engineering Responsibility: Engage a qualified professional engineer to prepare design calculations, Shop Drawings, and other structural data.

1. The engineer shall make two visits to the site (once during installation and once after completion of the work) to inspect their respective components for conformance with the shop drawings.

C. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of cold-formed metal framing that are similar to those indicated for this Project in material, design, and extent.

D. Mill Certificate – Mill certificates signed by steel sheet producer or test reports from a qualified independent testing agency, indicating steel sheet complies with requirements, including uncoated steel thickness, yield strength, tensile strength, total elongation, chemical requirements, ductility, and galvanized-coating thickness.

E. Testing Agency Qualifications: An independent testing agency, acceptable to authorities having jurisdiction, qualified according to ASTM E329 to conduct the testing indicated, as documented according to ASTM E548.

F. Welding: Qualify procedures and personnel according to AWS D1.1, "Structural Welding Code--Steel," and AWS D1.3, "Structural Welding Code--Sheet Steel."

G. AISI Specifications: Comply with AISI's "Specification for the Design of Cold Formed Steel Structural Members" or "Load and Resistance Factor Design Specification for Cold-Formed Steel Structural Members" and the following for calculating structural characteristics of cold-formed metal framing:

1. CCFSS Technical Bulletin: "AISI Specification Provisions for Screw Connections."

PART 2 PRODUCTS

2.00 LEEDv4-S REQUIREMENTS

A. Products and materials used for this section of the work are required to meet the following criteria for LEEDv4-S materials credits, and a completed LEEDv4-S MATERIALS REPORTING FORM shall be submitted for all materials in this SECTION:

1. Recycled Content. (SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS for overall project recycled content requirements.) The General Contractor shall examine each product or material specification below for a stated minimum recycled content requirement, and if none is stated, the requirements under SECTION 018113 shall govern.

2. Regional Content. (See SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS for overall project regional content requirements.) The General Contractor shall examine each product or material specification below for a stated minimum regional content requirement, and if none is stated, the requirements under 018113 shall govern.

3. Furnish any ceiling and wall systems components, including gypsum board products, insulation and acoustical ceiling systems and wall coverings such that they meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

4. Furnish any adhesives and sealants such that they meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

2.01 MATERIALS

A. General – To establish a standard of quality and design desired, Specifications are based on drywall system members, as manufactured by U.S. Gypsum Company. Similar systems and materials, manufactured by National Gypsum Company and Georgia Pacific will be considered for approval as an equal by the Architect, upon receipt of adequate supporting data, and samples.

B. Studs, tracks, and joists – USG galvanized steel screw studs with matching floor and ceiling tracks, in sizes indicated on the Drawings. Gauges shall be in accordance with the requirements of the GYPSUM CONSTRUCTION HANDBOOK (latest edition) as printed by U.S.G., with a minimum of 16 gauge at exterior drywall backup system, a minimum of 20 gauge at jambs of interior door openings, 20 gauge x 8 inches deep at joists, minimum 20 gauge at acoustic wall partitions Type 9/9A/9B/9C, minimum 18 gauge at interior acoustic separation ceilings spanning between beams, and a minimum of 25 gauge at interior partitions. Studs at exterior wall backup system shall be C-shaped, with stiffened flanges, complying with ASTM C955, 8 inches wide, and a minimum of 1-5/8 inches deep. Tracks shall be U-shaped, unpunched, with a minimum 1-1/4- inch deep flange. Single deflection tracks shall be deep-leg, U-shaped, unpunched, with unstiffened flanges, of web depth to contain studs while allowing free vertical movement, with 2 inch minimum deep flanges, designed to support horizontal and lateral loads. ~~Studs at interior acoustic partition walls shall be minimum 16 gauge.~~

1. Minimum structural requirements for drywall construction system backing exterior face masonry veneer and metal wall panels are as follows. Loads are based on ultimate strength values (in accordance with ASCE 7-10/2015 IBC) and are minimum design loads, unless greater design load is required by code.

    a. Wind loading: +45 PSF/-49 PSF at non-Salient areas
    +45 PSF/-60 PSF at Salient areas.

    b. Stud design for deflection: L/600 non-composite at masonry veneer areas, L/360 at non-masonry veneer areas.

2. Minimum structural requirements for interior stud systems supporting gypsum wallboard finish is as follows:

    a. Interior loading: 5 PSF typical

    b. Stud design for deflection: L/360

3. Minimum structural requirements for interior acoustic separation ceilings spanning between beams as follows:

    a. Loading: 25 PSF

    b. Deflection: L/360.

4. Minimum structural requirements for light gauge doghouse roof joists supporting plywood decking shall be 105 psf.

5. Provide multiple jamb studs (two minimum) at each side of all openings in exterior drywall back-up system. The approximate number of additional studs at each side shall be equal to 1/2 the number of studs interrupted by the opening or required by actual design.

    a. Provide extended-leg slip tracks at the tops of exterior drywall back-up system when attaching to the building structure. Slip tracks shall allow the structural to deflect vertically without bearing on the exterior wall members, but shall resist all lateral loads imposed on them by these members. Provide slip track reinforcing at built up jambs and elsewhere necessary by actual design.

6. In the event of conflict among contract drawings, contract specifications, and referenced standards, the most stringent requirements shall govern.

7. Provide G90 galvanization at all studs, tracks and runners exposed to the weather and G60 galvanization at all metal studs, tracks and runners located inside the air and vapor barrier of the building envelope.

8. Provide deflection track at all LGMF walls (at interior and exterior locations) where LGMF is to be secured to beams, floor decks and roof deck above.

C. Gypsum Panels, Shaft Wall Liner, Cement Backer Board, and Gypsum Sheathing:

1. Regular Gypsum Panels (ASTM C 1396): National Gypsum Co. Gold Bond "XP" gypsum panels, U.S. Gypsum Co. "Mold Tough" gypsum panels, CertainTeed "ProRoc M2Tech" Moisture and Mold Resistant gypsum panels, or an approved equal, 5/8 inches thick or as otherwise indicated on the Drawings. ASTM C 1396

2. Fire Rated Gypsum Panels (ASTM C 1396): National Gypsum Co. Gold Bond "XP Fire-Shield" Type X panels, U.S. Gypsum Co. "Mold Tough" Firecode Core Type X panels, CertainTeed "ProRoc M2Tech" Type X panels, or an approved equal, 5/8 inches thick or as otherwise indicated on the drawings.

3. High Abuse Resistant Gypsum Panels (ASTM C1629): National Gypsum Co. Gold Bond "Hi-Abuse XP" Type X panels, U.S. Gypsum Co. "Abuse Resistant" Firecode Type X panels, CertainTeed "ProRoc Abuse Resistant" Type X panels, or an approved equal, 5/8 inches thick or as otherwise indicated on the Drawings.

4. Shaft Wall Liner Panels (ASTM D 3273): National Gypsum Co. Gold Bond "Fire-Shield Shaftliner XP" (moisture/mold resistant) Type X panels, U.S. Gypsum Co. "Sheetrock Mold Tough Gypsum Liner" Type X panels, CertainTeed "M2Tech" Type X Shaftliner panels or an approved equal, 1 inch thick or as otherwise indicated on the Drawings.

5. Cement Backer Board (ASTM C 1325): National Gypsum Co. "PermaBase" Cement Board, U.S. Gypsum Co. "Durock" Cement Board, FinPan Inc. "Util-A-Crete" cement board, or an approved equal, 5/8 inches thick or as otherwise indicated on the Drawings.

6. Exterior Glass Faced Gypsum Sheathing (ASTM C 1177): Georgia-Pacific "DensGlass" Exterior Sheathing, National Gypsum Co. eXP Sheathing, U.S. Gypsum Co. "Securock", Temple Inland Green Glass Sheathing, or an approved equal, ½ inch thick, square edge panels.

7. 1-Hour Fire Rated Exterior Glass Faced Gypsum Sheathing (ASTM C 1177): Georgia-Pacific (DensGlass) "DensGlass Fire Guard" Exterior Sheathing, National Gypsum Co. "eXP Fireshield" Sheathing, U.S. Gypsum Co. "Securock – FireCodeX", Temple Inland Green Glass Sheathing, or an approved equal, 5/8 in. thick, square edge panels, ASTM C 1177).

   a. **Refer to Article 1.05, Submittals, paragraph C for required documentation confirming compliance with NFPA 285.**

8. Recycled content: Gypsum wallboard shall be produced using an average minimum 5% post-consumer recycled content.

D. Caulking and Acoustical Sealant Materials:

1. For penetrations in wallboard surfaces, and exposed-to-view joints between drywall accessories and dissimilar materials – Tremco Latex Caulk, DAP Latex Caulk, Pecora AC-20 Latex or an approved equal.

2. Polymer Caulk, or an approved equal product in colors as selected by the Architect.

3. For application to legs of stud tracks, and concealed from view joints between gypsum board and dissimilar materials - Gold Bond Acoustical Sealant, Tremco Acoustical Sealant or an approved equal.

E. Compressible Filler – Between stud tracks and adjacent construction fiberglass sill sealer, 1/4 inch thick.

F. Suspension System for Gypsum Board and Sheathing Ceilings and Soffits:

1. Hangers – Galvanized steel wire, No. 8 gauge.

2. Carrying Channels – 1-1/2 inch channels, weighing 475 pounds per thousand lineal feet, primed with rust-inhibitive paint, or where specifically indicated on the Drawings, metal studs, as herein before specified.

3. Furring Channels – USG Screw Furring Channels (used in conjunction with carrying channels only).

4. Furring Channel Clips – Wire type, as provided by the manufacturer of the channels.

5. Alternate Suspension System – As an alternate to the suspension system specified used in F.1 through F.4 above, suspension system shall consist of drywall “tee” grid system, Armstrong “Screw Stop”, USG, Chicago Metallic or an approved equal.

   a. Main beams with 1-1/2-inch wide face x 1-1/16-inch high “bulb tee” installed 4 feet on center.

   b. Cross Tees with 1-1/2-inch wide face x 1-1/2-inch high “bulb tee” installed 16 inches on center.

   c. Hanger spacing as recommended by manufacturer for ceiling construction, maximum 4 feet on center.

   d. Include all clips and moldings required by conditions for a complete installation.

G. Channels for Furring – USG RC-1 Resilient Channels, Sheet Rock Z-furring channels, and Unimast furring channels, as shown on the Drawings and required by the various construction conditions.

H. Fasteners:

1. For single layer gypsum board to wood receiving members and metal studs and furring channels, and for first layer board of double layer application – Self-drilling Phillips bugle head, one inch long.

2. For stud tracks to concrete – Ramset or Phillips power-actuated fasteners. Concrete stub nails may be used for securing floor tracks.

3. For securing hangers to concrete overhead – Ramset or Phillips power-actuated eye pin anchors.

4. For securing hangers to metal overhead – Nelson acoustical stud welds.

5. For stud tracks to metal members – Spot welds or screws spaced as recommended by the manufacturer to assure a rigid installation.

6. For gypsum sheathing to metal studs – Self drilling Phillips bugle head, galvanized, 1-1/4 inches long.

7. Fasteners for exterior wall backup system shall be as follows:

   a. All fasteners connecting light gauge members and accessories shall be a minimum of No. 10 size having a minimum diameter of 0.153 inches.

   b. All fasteners connecting light gauge members to structural steel shall be power driven fasteners of 5/32 inch diameter minimum 16 inches on center maximum. All fasteners of light gauge members to concrete shall be power driven fasteners of 5/32 inch diameter minimum with a minimum of 1-1/4-inch embedment 16 inches on

I. Bridging and Bracing - Provide all necessary bridging and bracing; provide additional bridging and backing at wall stud areas where sheathing is not to be applied to both faces.

J. Accessories:

1. Casing Beads ("J" Beads) – Clark Dietrich 200 A and B, mudable casing and "L" beads, 5/8-inch size, 1 ¼-inch punched flanges. Similar casing beads as manufactured by Phillips Manufacturing or an approved equal will be considered upon submission of adequate supporting data

2. Corner Beads – Clark Dietrich 103 Deluxe cornerbead, galvanized, 1-1/4 inch by 1-1/4-inch punched flanges. Similar casing beads as manufactured by Phillips Manufacturing or an approved equal will be considered upon submission of adequate supporting data.

3. Abuse Resistant Radius Corner Beads – Galvanized steel, ¾ in. radius model CBB by Clark Dietrich. Similar abuse resistant radius corner beads as manufactured by Phillips Manufacturing or an approved equal will be considered upon submission of adequate supporting data.

4. Control Joints – Clark Dietrich No. 093, roll-form zinc. or other control joints by Cemco, US Gypsum or an approved equal.

   a. Control Joints in Fire Rated Partitions – Clark Dietrich No. FAS-093X or other UL listed control joints by Cemco, US Gypsum or an approved equal.

5. Reglets – Clark Dietrich, reveals or other similar profile reglets by Fry Reglet Corp., Cemco or an approved equal.

   a. Reglet Molding – Fry Reglet Corporation in dimensions shown on the Drawings, including but not limited to:

      1) 1/4 in. and 3/4 in. reveal moulding (sizes as called for on the Drawings) with flanges for tape and joint compound.

   b. Reglet Backer at Fire Rated Partitions – Clark Dietrich Flat Strap Backer (FSB) or other UL listed reglet backers by Cemco, US Gypsum or an approved equal.

c. Reglet Reveal/Picture Hanger – Fry Reglet Corporation

1) DRMH – 50

2) Provide one reveal picture hanger for every two linear feet of reveal.

6. Steel Column and Beam Clips – 2-3/8-inch wide x 2-inch high x 2-inch deep, 25 gauge, galvanized steel at designated furring areas by Grabber or an approved equal.

K. Exterior Plywood Sheathing at Mechanical Doghouses – C-C EXT-APA, unsanded, of thickness indicated on the Drawings.

L. Joint Tape Treatment (WALLBOARD) – Self-adhering fiberglass mesh with compound recommended by the manufacturer for the particular application conditions.

1. Level 5 finish at stair walls and where designated on the Drawings – Primer surfacer, first coat, pre-coat.

M. Joint Treatment at Cement Backer Board – Latex Portland cement mortar and two (2) inch wide alkali-resistant glass fiber mesh.

N. Joint Treatment of Gypsum Wallboard Covered by Tile – Tape (paper or fiberglass mesh) and joint compound.

O. Fire Safing – Roxul Safe-N-Sound insulation with clips and fire stop sealant/compound, in configurations to suit job conditions per reference standards. Similar firesafing by Thermafiber, CertainTeed or an approved equal will be considered upon submission of adequate supporting data.

P. USG C-H Studs and Accessories – 2 1/2 inches deep and 6 inches deep.

2.02 STENCILING IDENTIFICATION

A. Fire and Smoke Barrier Identification – All fire and smoke partitions (corridors and stairs) shall be labeled above the ceilings as such on both sides of rated partitions. Painting shall be performed in conjunction with stencil. Text shall be as follows:

"FIRE (OR SMOKE) RATED PARTITION – PROTECT ALL PENETRATIONS"

1. Lettering shall be minimum 3 inches in height, all upper case in the color 'RED.'

2. Identification shall be within 15 feet of the end of each wall (within rooms and along corridors) with a minimum of one sign for each space/room. Signage shall be spaced at intervals not exceeding 30 feet measured horizontally along the wall or partition.

PART 3 EXECUTION

3.01 ERECTION PROCEDURES

A. General – Erection procedures for the various drywall construction conditions, as set forth in the published specifications of the U.S. Gypsum Company, latest editions for the various system types, shall govern this work, with the additional requirements specified hereunder and indicated on the Drawings.

3.02 PARTITIONS, CEILING, FASCIAS, SOFFITS AND FURRED AREAS

A. Refer to the Drawings for various conditions and details of the work of this SECTION.

B. Coordinate the installation work with that of related trades, in particular the work of SECTION 06100-ROUGH CARPENTRY for proper installation of wood supporting members within drywall.

C. Apply a continuous bead of specified sealant to receiving legs of stud tracks, in interior partitions, prior to installing gypsum board thereon.

D. Install corner beads at all external corners of gypsum wallboard, and casings wherever gypsum wallboard abuts a dissimilar material. Use tape joint treatment for internal corners, for all joints.

E. Install expansion joint reveal reglets where indicated on the Drawings, and as recommended by the gypsum wallboard manufacturer, ***and in no event shall expansion joints exceed 30 feet on center.*** Install fire safing at expansion joint reveals reglets in rated walls and where shown in the Drawings.

F. Caulk around all items which penetrate gypsum wallboard including electrical receptacle boxes, witch boxes, piping, and the like.

G. Provide cased and reinforced openings for all major items penetrating the gypsum board surfaces.

H. Furnish and install cross bracing, knee braces, and other internal reinforcing and the like to assure a completely rigid assembly on gypsum board faced partitions, ceiling, and fascias as per the gypsum wallboard system manufacturer's recommendations, whether or not such bracing has been indicated on the Drawings.

I. Where acoustic partitions are indicated on the Drawings, provide heavy gauge (minimum 20 gauge) LGMF such that the two sides of the partition are self-supported from slab to deck and are not braced to each other.

J. Install access panels, occurring in gypsum board surfaces, which are furnished by trades requiring same, securing the flanges of the panels as recommended by the manufacturer.

K. Install compressible filler between stud tracks and adjacent construction in locations indicated on the Drawings.

L. Install double 20 gauge studs at door openings.

M. At door and window openings, cut gypsum wallboard and lath to fit around openings with joints centered above openings, **not at corners**.

3.03 EXTERIOR WALL BACK-UP ERECTION PROCEDURES

A. Studs and Runners

1. Align runners accurately according to exterior wall layout and secure to base and head with power-driven fastener spaces as per manufacturer's technical data.

2. Positions studs vertically in runners and space no greater than 16 inches on center. Securely anchor each stud to runner with four No. 10 ½-inch Type S-12 Low-Profile Head Screws, two at top and two at bottom, with one screw in each flange.

3. For the slip track system, allow 1/2 inch to ¾-inch clearance between top of studs and UR-runner. Do not fasten studs to UR-runner. Install 1-1/2 cold-rolled channel bridging within 10 inches to 12 inches of tops of studs. Connect bridging to each stud using welded or screw-attached USG Clip Angle.

4. Bridging of studs shall be provided at slip tracks (as described above) and according to the following schedule:

a. Walls up to 10 ft. height: One row bridging at mid-height.

b. Walls over 10 ft. height: Bridging rows equally spaced, not to exceed 5 ft. on center.

B. Exterior Sheathing

1. Glassmat Faced Sheathing – Install per manufacturer's instructions, using recommended fasteners and spacing. Coordinate installation with air and vapor barrier requirements.

3.04 ACCESSORY APPLICATION

A. Gypsum Panel Joints – Finish all face layer joints and internal angles with a U.S. Gypsum Joint System installed according to manufacturer's directions. ***Panel joints above finish ceilings shall have joints finished by this SECTION 092116.*** Spot exposed fasteners on face layers and finish corner bead, control joints and trim with at least three coats of joint compound, feathered out onto panel faces. Sand lightly between coats and following the final application of compounds to provide a smooth surface ready for painting. Do not roughen face paper when sanding.

B. Corner Bead – Reinforce all vertical and horizontal exterior corners with corner bead fastened with screws or staples 9 inches o.c. on both flanges along entire length of bead. Abuse resistant radius corner beads shall be used at all exposed corners along corridors and in stairs.

C. Casing Bead Trim – Where wall terminates against masonry or other dissimilar material, apply metal trim over face layer edge and fasten with screws or staples spaced 9 inches o.c.

D. Screws – Power-drive at least 3/8 inch from edges or ends of gypsum panels to provide uniform dimple 1/32 inch deep. In gypsum base, set flush with surface without tearing face paper.

E. Control Joints and Expansion Joints – Break face layer behind joint. Attach control joint to face layer with staples spaced 6 inches o.c. on both flanges along entire length of joint.

F. Finishing Fasteners – Apply a taping, all-purpose type or ready-mixed Plus 3 compound to fastener depressions as the first coat. Follow with a minimum of two additional costs of topping or all-purpose compound, leaving all depressions level with the surface. (Exception: ready-mixed Plus 3 Compound needs only one additional coat.)

G. Finishing Beads and Trims at Gypsum Wallboard:

1. Apply first coat to all bead and trim and properly feather out from ground to plane of surface. Compound must thoroughly dry prior to application of second coat. (Exception: Durabond joint compounds need only have hardened prior to application of next coat).

2. Apply second coat in same manner as first coat, extending compound slightly beyond onto face of panel. Compound must be thoroughly dry prior to application of finish coat.

3. Apply finish coat to all bead and trim, extending compound slightly beyond the second coat and properly feathering from ground to plane or surface. (Exception: Only two coats of ready-mixed Plus 3 Compound are needed). Sand finish as necessary to provide a flat smooth surface ready for decoration. When sanding take care not to roughen face paper.

4. Level 5 Finish – Where shown on the drawings, gypsum wallboard surfaces shall receive a Level 5 Finish (Gypsum Association Publication GA.214).

   a. Provide Level 5 finish at all locations indicated to received dry erase coating, at full extent of wall to natural breaks for full height of GWB.

   b. Provide Level 5 finish at all locations to received printed vinyl wallcovering (SECTION 101400-IDENTIFYING DEVICES).

H. Installation of Cement Backer Board – Center cement backer board end of edge joints on the framing and stagger joints in adjacent rows to four corners do not come together within same plane. Spacing panels with 1/8 inch joints in accordance with manufacturer's recommendations.

I. Joint Treatment at Cement Backer Board – Fill horizontal and vertical joints solid with latex-Portland cement mortar and tape with 2-inch alkali-resistant glass fiber mesh tape in accordance with the tile manufacturer's recommendation and applicable TCNA design standard. At corners tape joints using skim coat of latex-Portland cement mortar, but do not fill. Install specified corner bead accessories.

J. Joint Treatment at Gypsum Wallboard Covered with Tile – Treat joints with tape (paper or fiberglass mesh) and joint compound, bedding coat only with screws covered with one coat only.

3.05 SHAFT WALL SYSTEM

A. Position steel runners at floor and ceiling with the short leg toward finish side of wall. Securely attach runners to structural supports with power driven fasteners at both ends and maximum 25 inches on center.

B. Cut liner panels 1 inch less than floor-to-ceiling height and erect vertically between J-Runners. Where shaft walls exceed maximum available panel height, position liner panel end joints within upper and lower third points of wall. Stagger joints top and bottom in adjacent panels and reinforce end joints with horizontal C-H stud. Screw-attach studs to runners on walls over 16 feet high, if applicable.

C. Use steel C-H studs 3/8 inch to not more than 1/2 inch less than floor-to-ceiling height, and install between liner panels with liner inserted in the groove. Install full-length steel E-Studs or J-Runners vertically at T-intersections, corners, door jambs, and columns. Install full-length E-studs over gypsum liner panels at both sides of closure panels. Frame openings cut within a liner panel with J-Runner around perimeter. For openings, frame with vertical E-Stud or J-Runner at edges, horizontal J-Runner at head and sill, and reinforcing as shown on the drawings. Suitably frame all openings to maintain structural support for wall.

D. Install floor-to-ceiling steel J-Runners or E-Studs each side of steel hinged door frames to act as strut-studs. Attach strut-stud to floor and ceiling runners with two 3/8-inch Type S-12 Pan Head Screws. Attach strut-studs to jamb anchors with ½-inch Type S-12 screws. Over steel doors, install a cut-to-length section of J-Runner and attach to strut-studs with 3/8-inch Type S-12 Screws.

E. For double-layer finish, apply base layer ½-inch Sheetrock Brand Firecode "C" Panel vertically one side of studs. Fasten base layer to studs with 1 inch Type S Screws 24 inches on center. Caulk perimeter of base layer. Apply ½-inch Sheetrock Brand Firecode "C" Gypsum Panel face layer vertically over base layer with joints staggered and attached with 1-5/8 inch Type S. screws staggered from those in base, spaced 12 inches on center and driven into studs and runners.

3.06 STENCILING RATED PARTITIONS

A. Perform identification of fire rated partitions prior to installation of ceiling guards. Identifications shall be on both sides of fire and smoke partitions above the ceilings.

3.07 CUTTING AND PATCHING

A. When so directed by the Architect, and prior to any painting of gypsum board surfaces, check all drywall throughout the work, doing any and all cutting, patching, and joint treatment required in a manner satisfactory to the Architect.

3.08 PROTECTION AND CLEANING

A. During the operation of drywall work, protect the work of other trades against undue soilage and damage by the exercise of reasonable care and precautions. Repair and/or replace any work so damaged and soiled.

END OF SECTION

SECTION 096466

WOOD AND ATHLETIC FLOORING

PART 1 GENERAL

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish and install the following items required to complete the work of this SECTION, as shown on the Drawings and specified herein:

1. Gymnasium wood flooring system comprised of the following:
    a. Polyethylene membrane.
    b. Natural rubber pads with air channels on plywood sub flooring panels, and all necessary fasteners.
    c. Maple flooring, with sealer and finish.
    d. Perimeter ventilating base.
    e. Game lines and floor paint.
    f. Leveling of sub floor to blend wood flooring with adjacent finish elevations and to provide a level surface due to concrete slab shrinkage.
2. Cafeteria platform wood flooring system comprised of the following:
    a. Polyethylene membrane.
    b. Natural rubber pads with air channels on plywood sub flooring panels, and all necessary fasteners.
    c. Red Oak flooring and exposed edge apron, with sealer and finish.
    d. Perimeter ventilating base at GWB wall at back wall of Platform.
    e. Leveling of sub floor to blend wood flooring with adjacent finish elevations and to provide a level surface due to concrete slab shrinkage.

B. LEEDv4-S Requirements:

1. The work of this section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEEDv4-S Certification at “Silver” Level is an Owner Requirement that is critical to secure project funding from the Massachusetts School Building Authority. LEEDv4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.

2. Wood flooring system components must meet the flooring requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

3. For all adhesives, sealants, paints and coatings, meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113 - SUSTAINABLE DESIGN REQUIREMENTS.

4. For all composite wood and agrifiber products, meet the LEED requirements for IEQ Credit 2 as defined in SECTION 018113 - SUSTAINABLE DESIGN REQUIREMENTS.

5. CERTIFIED WOOD – 100% of wood products furnished under this section shall be FSG certified.

6. Meet the LEEDv4-S requirements for MR Credit 2, Building Product Disclosure and Optimization – Environmental Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers' product documentation for each product having an Environmental Product Declaration (EPD).

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be performed under the designated SECTIONS:

1. Concrete slab and concrete finish: SECTION 033000-CAST-IN-PLACE CONCRETE.

2. Wood paneling, detailed to provide ventilation at wood-paneled side walls at Platform: SECTION 062000-FINISH CARPENTRY.

3. Floor mounted game standards SECTION: SECTION 116600-ATHLETIC AND SPORTS EQUIPMENT.

4. Cafeteria platform risers/treads: SECTION 062000-FINISH CARPENTRY.

5. Sound vibration and seismic control: SECTION 134800-SPRING LIFT CONCRETE SLAB FLOATING FLOOR SYSTEM.

6. Thresholds and expansion covers, provided by: SECTION 087100-FINISH HARDWARE, installed by SECTION 062000-FINISH CARPENTRY.

1.04 SUBMITTALS

A. Submit complete shop drawings, including manufacturer's specifications, and installation data for wood flooring systems and finishes specified herein, in accordance with the provisions of SECTION 013300-SUBMITTALS.

B. Submit the following samples in accordance with the provisions of SECTION 013300-SUBMITTALS.

1. Assembled section of the respective floor systems, 24-inch x 24-inch minimum, including all components and finish.

2. Fasteners for systems flooring.

C. Submit care and maintenance instructions for flooring.

D. LEED for Schools Submittals (Refer to SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS):

1. Relevant supporting documentation required by LEED for Schools v4 and as detailed in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

2. A completed LEED MATERIALS REPORTING FORM, per SECTION 018113-SUSTAINABLE DESIGN REQUIRE,MENTS.

3. Product substitution requests are subject to additional LEED-S submittal requirements. Refer to SECTION 012500-SUBSTITUTION PROCEDURES.

1.05 QUALIFICATIONS

A. Work of this SECTION shall be performed by an established flooring installation firm approved by the flooring system manufacturer and qualified by a minimum of five (5) years of experience and in a financial position to do the work specified hereunder.

B. Submit, with transmission of initial samples required, the following:

1. Experience record showing the wood flooring installation firm's training and experience in similar work.

2. List and give brief description of similar work, satisfactorily completed, with location, date of contracts, together with names and addresses of owners.

3. List of facilities and equipment available to do the work.

C. The flooring installer shall be experienced in the supervision of wood and athletic flooring installation in this type of work. The actual work shall be done by qualified and experienced mechanics working under his supervision.

D. The Architect reserves the right to reject the wood and athletic flooring firm if (1) the required qualification data is not received, or (2) the data submitted indicates an unsatisfactory experience record.

1.06 DELIVERY, STORAGE AND HANDLING

A. Materials shall not be delivered or installed until all masonry, painting, plastering and tile work are completed and all overhead mechanical work, lighting, backstops, scoreboards have been installed. Room temperature shall be at least 55 degrees or higher, and moisture content of concrete slab of 4.5% or less, or vapor transmission not to exceed 4.5 pounds per 1,000 square feet. Environmental temperatures must average a minimum of 65 degrees and relative humidity 50% or lower for a period of one week before, during, and 72 hours following installation.

B. Area where materials are to be stored shall be maintained at 55 degrees and under 50% relative humidity by the General Contractor. Store materials at project site for sufficient length of time to equalize with site conditions. Open cartons minimum 48 hours before installation.

1.07 GUARANTEE

A. Upon completion of the work, submit to the Architect, for transmission to the Owner, two (2) copies of a written guarantee, covering prompt and proper replacement and repair of any and all improper work and materials that may become apparent within twelve (12) months after the date of Substantial Completion under the work is performed.

PART 2 PRODUCTS

2.00 LEEDv4-S REQUIREMENTS

A. Products and materials used for this section of the work are required to meet the following criteria for LEEDv4-S materials Credits, and a completed LEED v4-S MATERIALS REPORTING FORM shall be submitted for all materials in this SECTION:

1. For IEQ Credit 2: Submit a completed Materials Reporting Form for VOC content of adhesives, sealants, paints and coatings.
2. For IEQ Credit 2: Submit a completed Materials Reporting Form for each type of composite used product and adhesive indicating the product meets the formaldehyde emissions requirements for CARB ATCM for ultra-low-emitting formaldehyde (ULEF) or no-added formaldehyde (NAF) resins.
3. Recycled Content. (See Section 018113 Sustainable Design Requirements for overall project recycled content requirements.) The General Contractor shall examine each product or material specification below for a stated minimum recycled content requirement, and if none is stated, the requirements under 018113 shall govern.
4. Regional Content. (See Section 018113 Sustainable Design Requirements for overall project regional content requirements.) The General Contractor shall examine each product or material specification below for a stated minimum regional content requirement, and if none is stated, the requirements under 018113 shall govern.
5. Certified Wood (FSC). (See Section 018113 Sustainable Design Requirements for overall project FSC-Certified wood content requirements.) Submit a completed Materials Reporting Form for each Certified Wood Product.

2.01 MANUFACTURER – GYM FLOORING SYSTEMS

A. To establish a standard of quality, design and function, the gym floor system is based on “Action Thrust I” by Action Floor Systems. Similar systems by Robbins, Inc., Connor Sports Flooring and other manufacturers of similar quality, design, and function flooring systems will be considered for approval as an equal upon receipt of product literature as requested by the Architect.

2.02 MATERIALS – GYM WOOD FLOORING SYSTEM (Action Thrust I)

A. Membrane – 15-mil Stego Wrap or an approved equal with 6 inch lapped and continuously taped joints.

B. Pads – AirTech IV or an approved equal, ¾-inch thick natural rubber with a durometer hardness of 48 or less. Install pads on underside of lower plywood sub floor, 32 pads per 4 foot by 8 foot sheet in accordance with manufacturer’s recommendations.

C. Panel Sub Floor System

1. Sub Floor

a. Plywood – Two (2) layers of 15/32 inch thick x 4 feet x 8 feet hardwood premium sheathing (HPS). Sheets shall be laid diagonal to each other and laminated with waterproof panel adhesive and with screws or annular nails as recommended by the manufacturer. Wood Staples are not allowed.

D. Finish Flooring Materials:

1. **Maple** finish flooring

a. Maple flooring – 25/32 inches thick x 2 1/4 inches in width, first grade Edge Grain, T&G and EM, KD Northern Hard Maple, continuous strip flooring, grade in accordance with MFMA Standards and FSC Certified.

b. Finishing materials – As specified under 2.04.

c. Total system thickness – 2-1/2 inches.

E. Perimeter Vented Base at Walls – Coved, 3 inches x 4 inches ventilating type with pre-molded corners in color as selected by the Architect.

F. Leveling Materials – As recommended by the floor system manufacturer for concrete sub floor conditions.

2.03 MATERIALS – CAFETERIA PLATFORM WOOD FLOORING SYSTEM (Action Thrust I)

A. Membrane – 15-mil Stego Wrap or an approved equal with 6-inch lapped and continuously taped joints.

B. Pads – AirTech IV or an approved equal, 3/4 inches thick natural rubber with a durometer hardness of 48 or less. Install pads on underside of lower plywood sub floor, 32 pads per each 4 foot x 8 foot sheet in accordance with manufacturer's recommendations.

C. Panel Sub Floor System

1. Sub Floor

a. Plywood – Two (2) layers of 15/32 inch thick x 4 feet x 8 feet C-D exposure I, 4 ply minimum plywood. Sheets shall be laid diagonal to each other and laminated with formaldehyde and VOC compliant waterproof panel adhesive and with screws or annular nails as recommended by the manufacturer. Wood Staples are not allowed.

D. Finish Flooring Materials

1. **Maple** Finish Flooring

a. Maple flooring – 25/32 inches thick x 2 1/4 inches in width, first grade Edge Grain, T&G and EM, KD Northern Hard Maple, continuous strip flooring, grade in accordance with MFMA Standards and FSC Certified.

b. Finishing materials – As specified under 2.04.

c. Total system thickness – 2-1/2 inches.

E. Perimeter Vented Base at Walls – coved, 3 inches x 4 inches ventilating type with pre-molded corners in color as selected by the Architect.

F. Leveling Materials – As recommended by the floor system manufacturer for concrete sub floor conditions.

2.04 WOOD FLOOR FINISH

A. To establish a standard of quality, design and function, the gym wood floor finish has been based upon Hillyard 350 gym floor finish as specified below. Similar systems by Bona or other manufacturers meeting the VOC and emissions requirements will be considered by the Architect as an equal based upon receipt of adequate supporting data.

1. Sealer – As recommended by the floor finish manufacturer meeting the VOC and emissions requirements,

2. Water based finish coats – Hillyard 350. Four (4) coats. Clear high solids solvent-based urethane-tough finish. The product shall be approved by Underwriters Laboratories for slip resistance, with the following statement on all container labels: Classified by Underwriters Laboratories, Inc. as to slip all resistance only 1865. The Gymnasium product shall be currently listed by Maple Flooring Manufacturers Association in Group 5.

3. Game line paint, LEEDv4-S compliant water-borne paint as recommended by floor finish manufacturer.

PART 3 EXECUTION

3.01 PRE-INSTALLATION CONDITIONS

A. Do not install floor system until concrete has been cured 60 days and the proper depression and floor tolerance with steel trowel finish has been provided.

B. After floors are finished, the floor shall be protected by covering with non-fibered kraft paper or red rosin paper with taped joints by the General Contractor.

3.02 INSTALLATION – WOOD FLOOR SYSTEM

A. All products covered by this SECTION shall be installed by qualified personnel in strict accordance with the manufacturer's written specifications, and the additional provisions herein specified.

B. Install polyethylene with joints lapped a minimum of 6 inches and turned up 4 inches at the walls.

C. Install first layer of sub floor perpendicular to direction of finished flooring. Apply ribbons of panel adhesive in a double box-X pattern. Over this, secure second layer of underlayment on a diagonal (approximately 45 degrees) to first layer with fasteners placed no greater than 12 inches on center in both directions and 6 inches along perimeter. All sub floor joints shall be staggered and spaced ¼ inch.

D. Machine nail maple finish flooring 10 inch to 12 inch on center running the direction of the main playing court with end joint properly driven up and proper spacing provided for humidity conditions. Provide 2-inch expansion voids at the perimeter and at all vertical obstructions. ***Staples are not allowed.***

E. Sanding – Floors shall be sanded after all other trades are finished. All wood floors shall be sanded with a heavy power-driven sander. For the first cut, the floor shall be traversed in both directions going with the grain of the flooring using No. 2-1/2 sandpaper. Follow with No. 1-1/2 paper, then with No. 1/2 and finishing with No. 00. All cuts should be made with the grain. Rough or finish sanding on the diagonal will not be permitted without specific permission from the Architect. Particular attention should be given on each finishing cut to completely remove the coarser grit marks from the preceding cut. Sanding machine shall not be moved more than two boards at a time for each traverse on any of the four cuts. After sanding, subcontractor shall thoroughly vacuum floor with heavy duty commercial type vacuum and request inspection by the Architect or his authorized representative before any finishing work shall start.

F. Sealing – After sanding, floor shall be thoroughly swept and vacuumed. Tack rag floor with a Turkish towel dampened with recommended solvent until no traces of sanding dust remain on floor. With a clean synthetic lamb's wool applicator, apply an even coat of sealer. While working 4 ft. by 4-ft. sections, apply product first across the grain then smooth out (feather) with the grain. After the first coat is thoroughly dry (usually 2-4 hour's) entire surface should be abraded using blue or green scrub pad under a single brush floor machine. Floor shall again be tack ragged using a Turkish towel slightly moistened with water. Apply the second coat of sealer following manufacturer's recommended procedures. Allow the floor to dry overnight.

G. Painting Game Lines (Gym Floor) – Mark game lines with proper colors of recommended game line paint according to Architect's drawings and with the use of precision taping machine for circles and arches. Note: Masking tape should be pulled as soon as the paint starts to set and not allowed to stand overnight. Paint should be allowed to dry for at least 12 hours.

H. Finishing

1. After lines have dried overnight, abrade with blue or green scrub pad and tack rag with Turkish towel slightly moistened with water until no traces or powder remain on floor. Now apply the first coat of finish following same procedures as the first coat of finish. Allow to dry overnight. Abrade the floor with green or blue scrub pad and tack rag the floor with Turkish towel slightly moistened with water. Apply the second and third coats of finish in the same manner as above. After the final coat of finish do not use floor for at least 72 hours. Avoid heavy traffic for at least one week.
2. During product application and drying time, floor must be free of dust and dirt. Following the final coat turn on the air handling system to get good air movement. Temperatures of the floor, room, and materials should be 65 degrees F. or above during treatment and curing. Allow adequate ventilation for proper curing. Product must be abraded with 150 grit screens (instead of blue or green scrub pad) if allowed to cure more than 48 hours between coats.
3. Total coats, floor finish system: (2) sealer coats plus (4) finish coats.

I. Perimeter Base – Install Robbins vent cove base anchored to walls with base cement or screws and anchors. Use pre-moulded outside corners and neatly mitered inside corners.

J. Coordinate gym wood floor installation with athletic equipment mountings, flush mounted thresholds and expansion covers.

K. Coordinate cafeteria platform wood floor installation with wood platform risers.

3.03 CLEAN-UP

A. Clean up all unused materials and debris and remove same from the premises and legally dispose of.

END OF SECTION

SECTION 096816

CARPETING

PART 1 GENERAL

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish and install the following items of work as shown on the Contract Drawings and as specified herein:

1. Carpet, edging strips at dissimilar materials, and related accessories where indicated on the Finish Schedule and other Drawings.
2. Leveling of all floor surface areas designated to receive carpet.

B. Prepare new surfaces to properly receive the materials to be furnished and installed hereunder. Include sanding, cleaning, and installing mastic underlayment, as necessary, to ensure the specified level of tolerance and bonding of tile and base.

C. Test moisture content/relative humidity (RH) and alkalinity (pH) level of concrete slabs to receive finishes specified herein.

D. Furnish and install adhesives complying with minimum relative humidity of 99% and a level of alkalinity (pH) not less than 8 or greater than 12.

E. Vacuum clean all carpet upon completion of the work of this SECTION.

F. LEEDv4-S General Requirements

1. The work of this section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEEDv4-S Certification at “Silver” Level is an Owner Requirement that is critical to secure project funding from the Massachusetts School Building Authority. LEEDv4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.
2. For all adhesives or sealants, meet the LEED-S requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

3. For all flooring systems, meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

4. Meet the LEEDv4-S requirements for MR Credit 4, Building Product Disclosure and Optimization – Health Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers' product documentation for each product having a Health Product Declaration (HPD).

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be prepared under the designated SECTIONS:

1. Resilient base in conjunction with carpeting: SECTION 090005-RESILIENT FLOORING.

2. New concrete slabs including floor leveling to comply with specified floor flatness and floor levelness criteria: SECTION 033000-CAST-IN-PLACE CONCRETE.

3. Walk-off mats: SECTION 124813-MATS.

4. Moisture mitigation at resilient flooring and walk-off mats: SECTION 090005-RESILIENT FLOORING and SECTION 124813-MATS, respectively.

1.04 SUBMITTALS

A. Submit complete shop drawings in accordance with the requirements of SECTION 013300-SUBMITTALS.

B. These shop drawings shall show the directional layout of pattern and lay of pile of all carpet sections, all seams and cross joint locations, locations of edge strips and details of cutouts.

C. Submit the following samples in accordance with the requirements of SECTION 013300-SUBMITTALS.

1. Carpet, for quality only - 18 x 18 inches, accompanied by manufacturer's carpet specifications and certified laboratory flame spread tests.

2. Carpet, for color only - 13 x 18 inches of manufacturer's standard color blends for selection of a maximum of four (4) color blends by the Architect.

3. Edging – 6-inch length, with available colors for selection by the Architect.

D. Manufacturer's data sheets for all adhesives and leveling materials specified herein.

E. Submit two (2) copies of a complete manual on the manufacturer's maintenance recommendations for care, cleaning and maintenance of carpets installed.

F. LEED for Schools Submittals (Refer to SECTION 013300-SUBMITTALS):

1. Relevant supporting documentation required by LEED for Schools v4 and as detailed in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
2. A completed LEED MATERIALS REPORTING FORM, per SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
3. Product substitution requests are subject to additional LEED-S submittal requirements. Refer to SECTION 012500 – SUBSTITUTION PROCEDURES.

1.05 INSTALLATION QUALITY ASSURANCE

A. Work under this SECTION shall be performed by a carpet installation firm certified by the carpet manufacturer and qualified by experience and in a financial position to do the work specified hereunder.

B. Submit, with transmission of initial samples required, the following:

1. Experience record showing the carpet installation firm's training and experience in similar work.
2. List and give brief description of similar work, satisfactorily completed, with location, date of contracts, together with names and addresses of owners.
3. List of facilities and equipment available to do the work.
4. Letter from carpet manufacturer certifying the installation firm is an approved installer of the submitted product

C. The carpet installer shall be experienced in the supervision of carpet installation in this type of work. The actual work shall be done by qualified and experienced mechanics working under his supervision or under the supervision of an experienced workroom supervisor.

D. The Architect reserves the right to reject the carpet installation firm if (1) the required qualification data is not received, or (2) the data submitted indicates an unsatisfactory experience record.

E. In the event of conflicts between the Contract Drawings, the manufacturer's standards, and this specification SECTION, the more stringent requirements shall govern.

F. The carpet installer shall be certified by the Manufacturer.

G. Prepare new surfaces to properly receive the materials to be furnished and installed hereunder to ensure the specified level of tolerance and bonding of carpets.

1.06 GUARANTEES

A. In addition to the manufacturer's wear warranties specified herein, upon completion of the work, submit to the Architect, for transmission to the Owner, two (2) copies of a written guarantee, covering prompt and proper replacement and repair of any and all improper work and material that may become apparent within 12 months after the date of substantial completion under which the work is performed.

1.07 WARRANTY

A. Provide a standard, printed, non-prorated warranty from the Manufacturer. All warranty items to be full term, not pro-rated, for the indicated period. If the product fails to perform as warranted when properly installed and maintained, the affected area shall be repaired or replaced at the discretion of the Manufacturer. The term of the carpet warranty shall be fifteen (15) years and shall cover against:

1. Carpet Types 1 & 2 – 15 years
2. Coverage shall include:
    a. Excessive surface wear.
    Excessive wear means more than 15% loss of pile fiber weight measured before and after use.
    b. Edge ravel.
    c. Zippering.
    d. Backing delamination.
    e. Watermarking on any product not 100% loop construction.
    f. Excessive static electricity.
    g. Backing resiliency loss.

1.08 DELIVERY AND STORAGE

A. The Contractor shall verify the date of order, and number of days required for delivery of the carpeting and related items, and transmit such information to the Architect, in writing, within fifteen (15) days after Architect's approval of samples has been received.

B. The carpet installer shall be held responsible for the scheduling, receiving and placement on floors of goods from the manufacturer. Goods shall be delivered to the job site in the manufacturer's bundles and shall be clearly marked as to size, dye lot, and materials. A written record of receipt of goods shall be submitted to the Architect.

C. Store materials in a cool, dry condition (65°F to 75°F) in areas designated and carefully protect carpet from soiling and damage.

D. Carpet and adhesive shall be stored at a temperature of 72 degrees for 24 hours before installation.

PART 2 PRODUCTS

2.00 LEEDv4-S REQUIREMENTS

A. Products and materials used for this section of the work are required to meet the following criteria for LEEDv4-S materials Credits, and a completed LEEDv4-S MATERIALS REPORTING FORM shall be submitted for all materials in this SECTION:

1. Recycled Content. (See SECTION 018113-Sustainable Design Requirements for overall project recycled content requirements.) Contractor shall examine each product or material specification below for a stated minimum recycled content requirement, and if none is stated, the requirements under SECTION 018113 shall govern.
2. Regional Content. (See Section 018113-Sustainable Design Requirements for overall project regional content requirements.) Contractor shall examine each product or material specification below for a stated minimum regional content requirement, and if none is stated, the requirements under SECTION 018113 shall govern.
3. For all adhesives and sealants, meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION-SUSTAINABLE DESIGN REQUIREMENTS.
4. Furnish all carpeting and backing such that it is CRI Green Label Plus FloorScore or NSF/ANSI 332 certified and furnish all carpet adhesives such that they do not exceed 50 g/L. See SECTION 018113 - SUSTAINABLE DESIGN REQUIREMENTS.

2.01 CARPET

A. Manufacture and Type – To establish quality, construction, and color blends, the carpet shall be based upon Interface, Inc. Other carpet as manufactured by Tandus Centiva Floor Coverings, Mohawk Group Commercial Carpet or an approved equal will be considered as an equal upon meeting or exceeding the specifications herein.

B. Field Carpet (Field Color) – “Main Line” (For use in offices, conference rooms and media center and where shown on the drawings.)

1. Product Specifications

Construction	Tufted Textured Loop
Yarn System	Post-Consumer Content Nylon
Yarn Manufacturer	Universal
Dye Method	100% Solution Dyed
Soil / Stain Protection	Protekt

Preservative Protection	Intersept
Tufted Yarn Weight	15 oz/yd^2
Machine Gauge	1/12 in.
Pile Height	0.15 in.
Pile Thickness	0.102 in.
Stitches	7 /in.
Pile Density	5,294 oz/yd^3
Size	19.69 in. x 19.69 in.
Backing	GlasBac

2. Performance Specifications

Flooring Radiant Panel	(ASTM E 648) Passes
Smoke Density	(ASTM E 662) ≤ 450
Flammability	Passes Methenamine Pill Test (DOC-FF1-70)
Lightfastness	(AATCC 16 – E) ≥ 4.0 @ 60 AFU's
Static	(AATCC – 134) < 3.0 KV
Dimensional Stability	AACHEN Din 54318 < .10%
Traffic Classification	Heavy
Fiber Modification Ratio	1.7 to 1.9
Preservative Efficacy	(AATC 174 Parts 2 & 3) 99% Reduction / No Mold 7 Days
	(ASTM E 2471) Complete Inhibition

3. Environmental Specifications

Total Recycled Content	69%
Recycled Content (Post Industrial)	68%
Recycled Content (Post Consumer)	2%
Indoor Air Quality	Green Label Plus #GLP0820 CDPH 01350
Material Composition	Free of Added Formaldehyde, Heavy Metals and Ortho Phthalates, Fluorinated Chemicals (PFAS), and Halogenated Flame Retardants
Ingredients and Life Cycle Impacts	Environmental Product Declaration
Environmental Certifications	Green Circle Certified Environmental Facts NSF/ANSI 140 Gold

End of Life	Carpet to Carpet Recycling through ReEntry

C. Accent Carpet (Accent Color 1 and Accent Color 2) – Interface "Monochrome" (See drawings for patterns)

1. Product Specifications

Construction	Tufted Textured Loop
Yarn System	100% Recycled Content Nylon
Yarn Manufacturer	Aquafil
Dye Method	100% Solution Dyed
Soil / Stain Protection	Protekt^2
Preservative Protection	Intersept
Tufted Yarn Weight	24 oz/yd^2
Machine Gauge	1/12 in.
Pile Height	0.18 in.
Pile Thickness	0.119 in.
Stitches	10.3 /in.
Pile Density	7,261 oz/yd^3
Size	19.69 in. x 19.69 in.
Backing	GlasBac RE

2. Performance Specifications

Flooring Radiant Panel	(ASTM E 648) Passes
Smoke Density	(ASTM E 662) ≤ 450
Lightfastness	(AATC 16 – E) ≥ 4.0 @ 60 AFU's
Static	(AATC – 134) < 3.0 KV
Dimensional Stability	AACHEN Din 54318 < .10%
Traffic Classification	Heavy
Fiber Modification Ratio	1.9 to 2.2
Preservative Efficacy	(AATCC 174 Parts 2 & 3) 99% Reduction / No Mold 7 Days
	(ASTM E 2471) Complete Inhibition

3. Environmental Specifications

Carbon Footprint	7.3 Kg CO_2/M^2
Carbon Offsets	Carbon Neutral Floors

Total Recycled Content	77%
Recycled Content (Post Industrial)	67%
Recycled Content (Post Consumer)	10%
Indoor Air Quality	Green Label Plus #GLP0820 CDPH 01350
Material Composition	Free of Added Formaldehyde, Heavy Metals and Orth Phthalates, Fluorinated Chemicals (PFAS) and Halogenated Flame Retardants
Disclosure of Environmental Impacts	Environmental Product Declaration
Disclosure of Product Ingredients	Health Product Declaration
Environmental Certifications	Green Circle Certified Environmental Facts NSF/ANSI 140 Gold
End of Life	Carpet to Carpet Recycling

4. Accent Color 1 and Accent Color 2: Two colors will be chosen by the Architect from the manufacturers full line.

D. Performance Assurance

1. Flammability Requirements: The carpet product when tested with its attached backing, as represented by averages of testing from random samplings of production lots, must meet flammability requirements as specified.
2. Face Fiber Characteristics: Continuous Filament Nylon (CFN) type 6,6.
3. Stain Inhibiting: Stain inhibitor applied to the product during manufacture to resist fiber staining and soiling.
4. Backing Characteristics
   a. Fully fused to provide for no delamination.
   b. Closed cell, vinyl cushion backing.
   c. Backing system to provide for a barrier to moisture penetration.
   d. Product to provide for a chemically welded seam.
5. Adhesive System Characteristics
   a. Carpet as installed to be securely attached to floor in compliance with Americans with Disabilities Act (ADA) and Massachusetts Architectural Access Board (MAAB).
   b. Product to be installed without the use of wet adhesives.
6. Environmental Impact Characteristics
   a. The product shall be third party certified SCS FloorScore, NSF-140-Platinum and/or CRI Green Label Plus.

b. The product, when tested as manufactured (no air-out period required) shall have the following characteristics:

1) Less than 0.05 ppm (part per million) of formaldehyde.

2) Less than 0.50 mg/cubic meter of total volatile organics.

3) Less than 50 ug/cubic meter of total particulates.

4) Less than 1.0 ppb (part per billion) 4-PC.

5) Test over a 96 hour time period.

6) Submit compliance table.

c. Carpet to be delivered with a recycle bag for recycling of the plastic film used to protect the Microencapsulated Tackifier.

d. Carpet to be a reduction barrier to radon flow.

e. Carpet to be installed without the use of wet adhesives.

2.02 PERFORMANCE ASSURANCE – TESTING

A. Test reports shall be submitted for all performance assurance specifications listed below.

B. Requirements listed below must be met by all products.

C. All submitted test numbers shall represent average results for production goods of the referenced style.

D. Required Test Reports

1. Flooring Radiant Panel
ASTM E-648 of NFPA 253: Class 1 (CRF greater than 0.45 Watts/Sq Cm)

2. Backing Cellular Make-up: Closed Cell
Microscopic - As manufactured.

3. Backing Cellular Make-up: Closed Cell
Microscopic - After 50,000 Phillips Chair Cycles

4. VOC Chamber Testing Results
ASTM D 5116: Passing 1994 State of Washington Protocol

5. University of Pittsburgh Protocol (LC-50) for toxicity: “no more toxic than wood” when burned under the same conditions

6. Radon Flow Barrier Testing - Certified Lab
Flow Reduction Barrier

7. Moisture Barrier
Moisture Penetration by Impact @ 10 psi: No penetration after 10,000 impacts.

8. Seam Integrity after Philips Chair Test:

Seam to remain intact after 50,000 cycles

9. Delamination of Secondary Backing of Pile Floor Coverings
   ASTM D-3936: No delamination

10. Lightfastness
    AATCC 16E: Min 4 after 100 AFU

11. Static Propensity
    AATCC 134: 3.0 KV or less

12. Static Coefficient of Friction
    ASTM C-1028: Passes ADA requirements

13. Backing Density
    ASTM D 1667: 18.5 lbs./cu ft +/-5%

14. Backing Compression Set
    ASTM D 1667: Max - 10%

15. Backing Compression Deflection
    ASTM D 1667: Min 7 lbs./sq. in at 25%

2.03 ADHESIVES

A. Adhesive

1. Grid Set Green Adhesive 2000 Plus by Interface or equal meeting the following requirements:

   a. CRI Green Label Plus approved, meeting CA 01350 requirements.

   b. Suitable on concrete substrates up to 90% RH (per ASTM F 2170) and pH of 8.0-10.0.

B. Manufacturers shall be compatible with products provided herein and be one of the following or an approved equal:

1. “Sustain 1299” adhesive (by Forbo International)

2. “Magellan XPA” adhesive (by LJM Technologies)

3. “AquaFlex” adhesive (by Formulators, Inc.)

4. Other manufacturers of similar moisture mitigation system / product / adhesives meeting SCAQMD, Rule 1168 for low VOC adhesives will be considered as an equal upon receipt of adequate supporting data and performance criteria.

2.04 ACCESSORIES

A. Compatibility

1. **Coordinate compatibility of Product to be used for concrete sealer with Contractor.**

B. Edging

1. Snap-down standard edge unit no. 33-1 as manufactured by Mercer Plastics Company or approved equal, in color as selected by the Architect.

2. Leveling Compound - As recommended by carpet and backer manufacturers for the various substrate conditions.

2.05 APPLICATION

A. It is the intent of this SECTION that the carpet and the additional backing be fabricated as a single system and delivered to the job site for installation. The carpet and backing as a system shall meet all requirements for CLASS I fire rating.

PART 3 EXECUTION

3.01 MOISTURE CONTENT OF SLABS

A. Monitor Moisture Content of Slabs

1. Monitor moisture content of new concrete floor slabs to receive floor finishes to verify that moisture control procedures are sufficient to dry slabs sufficiently to permit floor finishes to be installed.

2. Continuously monitor relative humidity and moisture content of floor slabs starting after curing of concrete is complete. Perform the following procedures at least once every two weeks, increase frequency o once per week for the month prior to floor finish installation.

   a. Perform a hydrous calcium chloride test, ASTM F 1869.

   b. Perform relative humidity test using in situ probes, ASTM F 2170.

3. Conduct minimum of one test for each 1,000 sq. ft. of carpeted floor area or more frequently when drying rate is slower than anticipated.

3.02 MEASUREMENTS

A. Dimensions indicated on the Contract Drawings are approximate. Carefully check all dimensions and other conditions affecting this work in the field, and be responsible for proper installation of carpet in areas designated.

B. If, after taking the field measurements, it is determined that special width carpet would decrease the number of seams and/or the total quantity of material, with Architect's approval, obtain special widths from the mill.

3.03 INSPECTION OF SUBFLOORS

A. Inspect the receiving surfaces before commencement of work. Notify the General Contractor in writing, with copies to the Architect, of any conditions which would prevent producing satisfactory finished work.

B. The installation of carpet shall be an indication of the carpet installer’s acceptance of the subfloors and he shall automatically assume the responsibility for any unacceptable finished work caused by subfloor conditions.

3.04 INSTALLATION OF CARPET

A. Sub floor preparation including installation of moisture mitigation system and leveling materials as recommended by the respective flooring material manufacturers.

1. The Carpeting Subcontractor shall be responsible for furnishing and installing leveling materials as recommended by respective manufacturers for the various substrate conditions resulting in smooth, feathered changes in plane.
2. Concrete subfloor preparation, including leveling to be performed under this SECTION, shall include but is not limited to the following:
    a. Filling of minor cracks and imperfections in new subfloors.

B. General:

1. Check moisture of concrete at several locations using a hydrous calcium chloride test kit prior to carpet installation.
2. Comply with manufacturer's instructions and recommendations.
3. Level substrate using leveling compound in accordance with the recommendation of the carpet manufacturers.
4. Maintain direction of pattern, texture, and lay of pile.
5. Extend carpet into closets and offsets, and under movable equipment of rooms and spaces shown or scheduled to receive carpet, including recessed covers within those spaces.
6. Provide cutouts for removable access covers in substrates except do not cut out for floor closer cover plates. Remove carpet backing at outlet boxes, reducer strips, and similar penetrating items required where those items cannot accommodate the thickness of the backing.
7. Bind edges neatly and secure to substrate.
8. Cut only 3 sides where feasible to provide carpet flap in lieu of fully removable cutout.
9. Cut openings in carpet for electrical outlets, piping, and other penetrations.
10. Maintain close tolerances so edges of carpet will be covered by plates and escutcheons.
11. Install edge strip at every location where edge of carpet is exposed to traffic, unless otherwise indicated.
12. Install carpet as specified herein:
    a. “Main Line”: Non-directional installation, with direction per Architect.
    b. “Monochrome”: Non-directional installation, with direction per Architect.
13. ~~Install using peel and stick method in strict accordance with manufacturer recommendation.~~

C. Restrict all traffic and movement of furniture and materials for twenty-four (24) hours after carpet has been installed.

3.05 REPAIRING

A. Remove bubbles and ripples, repair seams, joints and edges, if required, once after the original installation is completed. The exact time for this work shall be left to the discretion of the Architect but shall be within 12 months after final approval of finished installation. Fourteen-day notice for this re-stretch shall be given by the Architect, so that the necessary arrangements for same can be made.

3.06 CLEAN-UP

A. Upon completion of the installation, remove all waste and excess materials, tools and equipment, and vacuum clean all carpet surfaces.

B. Remove soil spots in accordance with manufacturer's recommendations.

C. Protect carpet from damage and soiling.

D. Use non-staining cover material for protection.

E. Tape joints in protective covering.

END OF SECTION

SECTION 098400

ACOUSTICAL PANEL TREATMENTS

PART 1 GENERAL

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish and install the following items required to complete the work of this SECTION, as shown on the Drawings and specified herein.

1. Fibrous wood panels ('FWP'), including all necessary attachment hardware and edging material.
2. Fabric covered acoustic panels and all necessary attachment hardware and edging material.
3. Smooth textured acoustical panels for direct mounting to GWB ceilings.

B. LEEDv4-S Requirements:

1. The work of this section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEEDv4-S Certification at "Silver" Level is an Owner Requirement that is critical to secure project funding from the Massachusetts School Building Authority. LEEDv4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.
2. For all adhesives and sealants, meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
3. For all composite wood and agrifiber products, meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
4. For all wall coverings, meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
5. Fibrous wood wall panels shall be FSC and shall contain no added urea-formaldehyde resins. Fabric wrapped panels shall contain no added urea-formaldehyde resins.

6. Meet the LEEDv4-S requirements for MR Credit 2, Building Product Disclosure and Optimization – Environmental Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers' product documentation for each product having an Environmental Product Declaration (EPD).

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be performed under the designated SECTIONS:

1. Metal stud and gypsum board back up for acoustic wall panels: SECTION 092116-GYPSUM WALLBOARD.

2. Furring and blocking for attachment of wall hung items: SECTION 061000-ROUGH CARPENTRY.

3. Attachments to and penetrations of fibrous panels by trades requiring same.

4. Caulking between items furnished and installed under this SECTION and adjacent construction: SECTION 070001-DAMPPROOFING, WATERPROOFING AND CAULKING.

5. Painting of fibrous wood panels: SECTION 090007-PAINTING.

6. Clocks and speakers mounted on fabric covered panels and scoreboard mounted on fibrous wood panels: SECTION 260001-ELECTRICAL.

1.04 SUBMITTALS

A. Submit complete shop drawings in accordance with SECTION 013300-SUBMITTALS.

B. Shop drawings shall include wall elevations and reflected ceiling plans of fibrous panel systems, including large scale details of attachment and adjacent construction. Include with shop drawings manufacturer's data sheets for all items specified herein.

1. Shop drawings shall include wall elevations of acoustic panel systems, including large scale details of attachment and adjacent construction. Include with shop drawings manufacturer's data sheets for all items specified herein.

2. Submit complete product literature for items specified herein.

C. Submit the following samples in accordance with the requirements of SECTION 013300-SUBMITTALS.

1. All panels – 12 inches by 12 inches section of each type, showing specified long edge and end treatments.

2. Edging materials – 12-inch length of each type specified or required by job conditions.

3. Fabric Samples – Complete standard manufacturer's selection for color.

D. LEED-S Submittals (Refer to SECTION 013300 – SUBMITTALS):

1. Relevant supporting documentation required by LEED for Schools v4 and as detailed in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

2. A completed LEED MATERIALS REPORTING FORM, per SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

3. Product substitution requests are subject to additional LEED-S submittal requirements. Refer to SECTION 012500-SUBSTITUTION PROCEDURES.

4. For all new wood, provide itemized invoices showing wood that is FSC certified and wood that is not. Invoices that include FSC certified wood shall show the vendor's Chain of Custody Certificate number on them. Provide Chain of Custody certificates for all vendors supplying FSC certified wood.

PART 2 PRODUCTS

2.00 LEEDv4-S PRODUCT REQUIREMENTS

A. Products and materials used for this section of the work are required to meet the following criteria for LEEDv4-S materials Credits, and a completed LEEDv4-S MATERIALS REPORTING FORM shall be submitted for all materials in this SECTION:

1. Recycled Content. (See Section 018113 Sustainable Design Requirements for overall project recycled content requirements.) The General Contractor shall examine each product or material specification below for a stated minimum recycled content requirement, and if none is stated, the requirements under 018113 shall govern.
2. Regional Content. (See Section 018113 Sustainable Design Requirements for overall project regional content requirements.) The General Contractor shall examine each product or material specification below for a stated minimum regional content requirement, and if none is stated, the requirements under 018113 shall govern.
3. Certified Wood (FSC). (See Section 018113 Sustainable Design Requirements for overall project FSC-Certified wood content requirements.) For the sum of all wood products in this section, a minimum of 50% FSC wood is required.
4. Furnish any adhesives and sealants meeting the requirements for IEQ Credit 2, Low-Emitting Materials as defined in Section 018113 - SUSTAINABLE DESIGN REQUIREMENTS.
5. Furnish any ceiling and wall system components, including gypsum board products, insulation, acoustical ceiling systems and wall coverings such that they meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in Section 018113-SUSTAINABLE DESIGN REQUIREMENTS.
6. Furnish any composite wood and agrifiber products such that they do not contain any added urea-formaldehyde resins. Laminating adhesives used to fabricate on site AND shop applied composite wood and agrifiber assemblies must also not contain any added urea-formaldehyde resins.

2.01 FIBROUS WOOD PANEL SYSTEM

A. General – To establish a standard of quality, function and design, drawings and specifications for fibrous acoustic panels (“FAP”) are based on fibrous wood panels as manufactured by Tectum by Armstrong World Industries., Newark, Ohio. Other fibrous wood panels as manufactured by eNoise Control, Shanghai Colorbo Industrial Co., Foshan Lenbo Environmental Technology Co. or equal meeting the specified LEED requirements will be considered as an equal upon submission of adequate supporting data.

B. Fibrous Wood Panels - Panels shall be composed of aspen wood fibers bonded with an inorganic hydraulic cement, and formed by a continuous process under heat and pressure, as follows:

1. Wall Panels – 2 inches thick by 48 inches wide by lengths shown on the drawings. Panels shall have long edges both beveled, and tongue and grooved for interlocking of continuous paneling. Panel ends at top and bottom of panels shall have edges field beveled to match factory beveled long edges. Panels shall be factory primed white for field finish painting by SECTION 090007. Field painting shall comply with panel manufacturer's instructions to maintain sound absorption.
2. Sound absorption shall be at least NRC 0.60 with direct mounting Type A per ASTM E-795.

C. Fasteners, metal furring and related hardware – As recommended by a panel manufacturer for various installation conditions.

D. Fibrous wood wall panels shall be FSC and shall contain no urea-formaldehyde resins.

2.02 FABRIC COVERED PANEL SYSTEM

A. General – To establish a standard of quality, function and design, drawings and specifications for fabric wrapped acoustic wall panels are based on Armstrong "Soundsoak 85" Custom Acoustical Wall System. Similar panels by Kinetics Noise Control, US Gypsum or other manufacturers will be considered for approval as an equal by the architect upon receipt of adequate supporting data and samples.

B. General – System shall include the following components

1. Fabric covered panels as shown on the drawings.
2. Fasteners, adhesive, clips and hook and loop fasteners as recommended by the panel manufacturer for the installation conditions.

C. Panel Construction

1. Mineral fiber core with fabric or vinyl wall covering facing, to sizes and thickness as shown on the drawings. Panels shall be factory finished with fabric finish bonded to the panel face, edges, and one inch on the back. Fabric shall be flat and wrinkle free and fully tailored at the corners with no exposed darting.
2. Panel and material shall have a flame spread rate of 25 or less and smoke developed rate of 450 or less under ASTM E-84.
3. Panels shall have an NRC rating of .80 when tested in accordance with ASTM C-423 (type 'A' mounting per ASTM E-795).

4. Recycled Content – Mineral board core shall be 71% recycled content.

5. Fabric Material – Chosen from manufacturer's full range of standard and custom fabrics as manufactured by Guilford of Maine or similar products manufactured by Koroseal, Hytex, Maharam or approved equal.

6. Fabric wrapped panels shall contain no urea-formaldehyde resins.

2.03 SMOOTH TEXTURED CEILING DIRECT APPLICATION SYSTEM

A. General – To establish a standard of quality, function and design, drawings and specifications for panels are based on Armstrong "Invis Acoustic". Similar panels by Kinetics Noise Control, US Gypsum or other manufacturers will be considered for approval as an equal by the architect upon receipt of adequate supporting data and samples.

B. General – System shall include the following components:

1. Prefinish mineral fiber panels as shown on the drawings.

2. Fasteners or adhesive as recommended by the panel manufacturer for the installation conditions. Fasteners, if used, shall match panel color.

C. Panel Construction

1. Mineral fiber 2 ft. x4 ft. x ¾ in. thick square edge panels Armstrong 1212 WH or equal. Color: white.

2. Panel and material shall be class A and have a flame spread rate of 25 or less and smoke developed rate of 450 or less under ASTM E-84.

3. Panels shall have an NRC rating of .70 when tested in accordance with ASTM C-423 (type 'A' mounting per ASTM E-795).

4. Recycled Content – Mineral board core shall be a minimum of 50% recycled content.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install acoustic panels in strict accordance with manufacturer's requirements and the approved shop drawings.

B. Fibrous Wood Panels:

1. Secure to metal studs, furring and masonry substrates using “blind" mechanical fasteners wherever possible. When installation requirements necessitate face fastening, fastener heads shall be slightly depressed, with void filled with wood fibers (from panel) and white glue. Fasteners shall not be less than 16 inches on center.

2. Furnish and install fibrous wood panels in lengths to minimize end jointing, in accordance with the Contract Documents and approved shop drawings. Where required, field cut, fit and fill ends of panels for a tight butt joint.

3. Where shown on the drawings, field bevel ends of panels to match factory bevel on long edge.

C. Fabric Wallcovering Panels:

1. Panels shall be factory fabricated to sizes shown on the drawings and installed using mechanical, mechanical/Velcro and mechanical/adhesive combination in strict conformance to manufacturer’s recommendations. Install pre-painted trim over cut edges.

D. Mineral Fiber Panels:

1. Panels shall be directly adhered to GWB with manufacturer’s recommended adhesive.

2. Panels shall be installed long edge to long edge in a running bond pattern. Cut edges shall be limited to the perimeter of the field and shall be touched up in the field with matching finish.

3. Panels shall cover entire GWB substrate of coffers in cafeteria.

4. Joints shall be butted.

3.02 ADDITIONAL MATERIAL

A. Fabric covered panels: Provide to the Owner upon completion of work, maintenance stock of fabric finishes used in an identical dye lot. The minimum size to cover the largest acoustical panel.

B. Mineral Fiber Panels: Provide touch-up paint matching panel color. Minimum ½ pint in new sealed packaging.

END OF SECTION

SECTION 099737

DRY ERASE COATING

PART 1 GENERAL

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish and install the following, as shown on the Drawings and specified herein:

1. Dry erase coating system including primer at teaching walls in classrooms, project areas and where shown on the Drawings.

B. LEEDv4-S Requirements:

1. The work of this section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEEDv4-S Certification at "Silver" Level is an Owner Requirement that is critical to secure project funding from Massachusetts School Building Authority. LEEDv4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.
2. For all paints and coatings, meet the LEED requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
3. Meet the LEEDv4-S requirements for MR Credit 4, Building Product Disclosure and Optimization – Health Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers' product documentation for each product having a Health Product Declaration (HPD).

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be performed under the designated SECTIONS:

1. Unpainted Level 5 finished GWB: SECTION 092116-GYPSUM WALLBOARD.
2. Painted GWB not intended for dry erase markers: SECTION 090007-PAINTING and SECTION 092116-GYPSUM WALLBOARD.
3. Aluminum framed markerboards: SECTION 101100-MARKERBOARDS & TACKBOARDS.

1.04 SUBMITTALS

A. Submit the following samples in accordance with the requirements of SECTION 01330-SUBMITTALS.

B. Product Data: Manufacturer's data sheets on each product to be used, including:

1. Preparation instructions and recommendations.
2. Storage and handling requirements and recommendations.
3. Installation methods.

C. Maintenance Instructions: Provide precautions against cleaning materials and methods that may be detrimental to finish and performance.

D. Samples: Submit verification sample of specified color on manufacturer’s standard sample card.

E. Mock-ups: Prepare mock-ups for Architect's review and to establish requirements for substrate finish and final coating application, texture and color.

1. Install dry erase coatings mock-up in area designated by Architect.
2. Correct areas, modify method of application/installation, or adjust finish texture as directed by Architect to comply with specified requirements.
3. Maintain mock-ups accessible to serve as a standard of quality for this Section.
4. Accepted mock-ups may remain in place.

F. LEED for School Submittals (Refer to SECTION 013300-SUBMITTALS):

1. Relevant supporting documentation required by LEED for Schools v4 and as detailed in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
2. A completed LEED MATERIALS REPORTING FORM, per SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
3. Product substitution requests are subject to additional LEEDv4-S submittal requirements. Refer to SECTION 012500-SUBSTITUTION PROCEDURES.

1.05 QUALITY ASSURANCE

A. Fire Performance Characteristics: Comply with fire performance characteristics indicated below. Identify components with markings from testing and inspection organization.

1. ASTM E-84 (Fuel Contribution) - Class A, flame spread 5, smoke developed 0.

B. Manufacturer Qualifications: Minimum 3 years manufacturing dry erase coatings.

C. Installer Qualifications: Approval by dry erase coating manufacturer and minimum 3 years experience installing dry erase coatings.

PART 2 PRODUCTS

2.00 LEEDv4-S REQUIREMENTS

A. Products and materials used for this section of the work are required to meet the following criteria for LEEDv4-S materials Credits, and a completed LEED v4-S MATERIALS REPORTING FORM shall be submitted for all materials in this SECTION:

1. Furnish any paints and coatings such that they meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

2.01 MATERIALS

A. Manufacture: To establish a standard of quality, design and function, manufacture has been based upon “Pro” by IdeaPaint, Boston, MA 02109, www.ideapaint.com.

B. Similar dry erase coatings by Benjamin Moore “Notable”, Rust-O-Leum “Specialty” or others will be considered for approval by the Architect upon receipt of adequate supporting data and samples.

C. Color: White

D. Qualities:

1. VOC (EPA Method 24 or ASTM D3960): 325 g/L.
2. Coverage: 1 quart per 50 sf (4.6 sq. m).
3. Density (mixed) (ASTM D1475) 10.37 lbs/gal.
4. Opacity/Hiding Power (ASTM D2805): 96%.
5. Sag Resistance (ASTM D4400): 8.
6. Flow and Leveling (ASTM D2801): 10.
7. Crack Resistance (ASTM D522): 21%.
8. Finish/Gloss (ASTM D523) on drywall board:
   a. 20 degrees: 26.6
   b. 60 degrees: 71.0
   c. 85 degrees: 68.0
9. Scrub Resistance (ASTM D2486): Breakthrough at 15,600 Cycles.
10. Stain Removal / Washability (ASTM D3450): > 99.55%.
11. QUV (ASTM D4587) Status after 500 hours:
    a. White Board: Brightness for White Board QUV = 91.44, DE = 2.01. Observation: Not as blue, acceptable; performance acceptable.
12. Thermal: KCMA ANSI-A161.1-1995 Method 9.2, 26 cycle no cracking observed.
13. Flashpoint (open cup) (ASTM D92): 80°F (26.7°C).

14. Flammability Limit: ASTM E682, lower flammability limit 1.69 percent at 212°F (100°C); upper flammability limit greater than 9.44 percent at 212°F (100°C).

15. Fire Rating (ASTM E84): Flame 5, Smoke 0 or Class 1 or Class A.

E. Primer:

1. IdeaPaint PRIMER, Sherwin-Williams Multi-Purpose, PPF Seal Grip, Glidden Gripper or Kilz Premium.

F. Applicator:

1. Roller Covers (For IdeaPaint): 9-inch-wide FoamPro roller cover by FoamPro. No substitutions.

2. Per manufacturer's written recommendations (other manufacturers).

G. Material Delivery and Storage:

1. Deliver materials in original factory wrappings and containers, clearly labeled with manufacturer, product name and fire hazard classification.

2. Store materials in original undamaged packages and containers inside a well-ventilated area protected from weather, moisture, soiling, extreme temperatures and humidity. Store at temperatures above 40°F. Do not allow product to freeze.

PART 3 EXECUTION

3.01 ACCEPTANCE OF SURFACES

A. Inspect all Level 5 finished GWB surfaces and assure that they are in proper conditions to receive work to be performed under this SECTION. Any questions as to the proper performance of the various paint systems specified herein shall be brought to the Architect's attention no later than 15 calendar days prior to the date of commencing work, otherwise, the Painting Subcontractor shall assume the responsibility for providing the desired results.

B. The commencement of work in any space by the Dry Erase Coating Subcontractor shall be construed as acceptance of the surfaces as being satisfactory, any defects to his work resulting from such accepted surfaces shall be corrected by him at his own expense.

3.02 PREPARATION

A. Surface Preparation: Remove hardware, accessories, plates and similar items to allow dry erase coatings to be installed.

1. Plaster Surface: Remove surface chalk. In new work use moisture meter to determine moisture content. Do not begin installation when moisture content is greater than five percent.
2. Gypsum Board Surface: Provide Level 4 finish per ASTM C840 and GA-214. Recess nails and screws. Repair irregular tape joints, sand and remove dust.

B. Prime substrate using materials recommended by manufacturer. Prime surface until the color of the existing surface does not show through.

C. Ventilate area thoroughly to prevent the odor from permeating to other areas in the building. Provide 100 percent outside air ventilation of application areas.

3.03 PROJECT CONDITIONS

A. A. Maintain ambient temperature not less than 68^{o}F minimum and 85^{o}F maximum 72 hours prior to beginning of installation.

1. Do not install dry erase coatings until the space is enclosed and weatherproof.
2. Do not install dry erase coatings until temperature is stabilized and permanent lighting is in place.

3.04 APPLICATION

A. Comply with manufacturers printed installation instructions. Mix components in strict accordance with manufacturer’s instructions. Pot life is 1 hour maximum.

B. Apply dry erase coating with specified roller only. Comply with the following:

1. Apply heavy single coat ONLY. Do not recoat or touch up applied coating.

2. Paint surface by working from one end to the other.
3. Begin by cutting in the edges of an approximately 2 foot wide section.
4. Paint 2 foot wide section, maintaining a wet edge.
5. Roll new section into wet edge.
6. Continuously check for skips, holes, and holidays as application progresses.
7. Remove masking tape within 1 hour of painting.

C. Coating shall cure for a minimum of 7 days after application before use.

D. Application Rate: Maximum 50 square feet per quart.

3.05 CLEANING AND REPAIR

A. Daily erasing and cleaning should be done with a standard dry erase eraser, dry cotton cloth, or micro-fiber towel. Be sure to use clean erasers. For periodic and more thorough cleaning use a clean damp cloth or dry erase cleaner or wipes.

B. If damaged, the original surface should be deglossed by scuffing surface and priming before recoating with IdeaPaint.

3.06 PROTECTION

A. Protect installed product and finished surfaces from damage during construction.

END OF SECTION

Division 10
Specialties

SECTION 101100

MARKERBOARDS AND TACKBOARDS

PART 1 GENERAL

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish and install the following:

1. Fixed markerboards and tackboards (without marker trays) including maprails and all specified accessories and hardware.
2. Prefabricated sliding markerboard units, complete with all operating hardware.

B. LEEDv4-S Requirements:

1. The work of this Section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEEDv4-S Certification at "Silver" Level is an Owner Requirement that is critical to secure funding from the Massachusetts School Building Authority. LEEDv4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.
2. For all adhesives and sealants, meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
3. Meet the LEEDv4-S requirements for MR Credit 2, Building Product Disclosure and Optimization – Environmental Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers' product documentation for each product having an Environmental Product Declaration (EPD).

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be performed under the designated SECTIONS:

1. All necessary blocking required for attachment of tackboards and markerboards: SECTION 061000-ROUGH CARPENTRY.
2. Partition construction: SECTION 040001-MASONRY, and SECTION 092116-GYPSUM WALLBOARD.
3. Tack surfacing material for direct installation to wall surfaces and at display cases: SECTION 062000-FINISH CARPENTRY.

4. Marker wall paint: SECTION 099737-DRY ERASE COATING

1.04 SUBMITTALS

A. Submit complete shop drawings in accordance with the requirements of SECTION 013300-SUBMITTALS.

B. Include large-scale details of items specified herein, showing proposed methods of anchorage to each type of surrounding structure.

C. Submit markerboard, tackboard, and cork color samples:

1. Cork samples shall be not less than 1 in. x 2 in. in manufacturers full line of available cork colors.

2. Markerboard and tackboard samples shall be 12 in. x 12 in. with aluminum trim.

3. Hanger – Two sets of sliding board hanging hardware each minimum 12 in. including hanger and bottom guide channels. One set to be given to millwork subcontractor for coordination of cabinetry.

D. LEED for Schools Submittals (Refer to SECTION 013300-SUBMITTALS)

1. Relevant supporting documentation required by LEED for Schools v4 and as detailed in Section 018113-Sustainable Design Requirements.

2. A completed LEED MATERIALS REPORTING FORM, per Section 018113-Sustainable Design Requirements.

3. Product substitution requests are subject to additional LEED-S submittal requirements. Refer to SECTION 012500-SUBSTITUTION PROCEDURES.

4. For all new wood, provide itemized invoices showing wood that is FSC certified and wood that is not. Invoices that include FSC certified wood shall show the vendor's Chain of Custody Certificate number on them. Provide Chain of Custody Certificates for all vendors supplying FSC certified wood.

E. Markerboards and tackboards in final colors and configurations with all accessories required for Sample Classroom (Refer to SECTION 013300-SUBMIITALS, Article 1.10.)

PART 2 PRODUCTS

2.00 LEEDv4-S REQUIREMENTS:

A. Products and materials used for this section of the work are required to meet the following criteria for LEEDv4-S materials Credits, and a completed LEEDv4-S MATERIALS REPORTING FORM shall be submitted for all materials in this SECTION:

1. Recycled Content. (See Section 018113 Sustainable Design Requirements for overall project recycled content requirements.) Contractor shall examine each product or material specification below for a stated minimum recycled content requirement, and if none is stated, the requirements under 018113 shall govern.
2. Regional Content. (See Section 018113 Sustainable Design Requirements for overall project regional content requirements.) Contractor shall examine each product or material specification below for a stated minimum regional content requirement, and if none is stated, the requirements under 018113 shall govern.
3. Rapidly Renewable Content. (See Section 018113 Sustainable Design Requirements for overall project rapidly renewable content requirements.) Contractor shall examine each product or material specification below for a stated minimum rapidly renewable content requirement, and if none is stated, the requirements under 018113 shall govern.
4. Certified Wood (FSC). (See Section 018113 Sustainable Design Requirements for overall project FSC-Certified wood content requirements.) For the sum of all wood products in this section, a minimum of 50% FSC wood is required.
5. Furnish any adhesives and sealants meeting the requirements for IEQ Credit 2, Low-Emitting Materials as defined in Section 018113 - SUSTAINABLE DESIGN REQUIREMENTS.

2.01 FIXED MARKERBOARDS, TACKBOARDS AND TRIM

A. Standard of Quality and Design - To establish a standard of quality, design, and function desired, fixed markerboards, tackboards, and trim are based upon **standard and custom sized products** as manufactured by Claridge Products and Equipment, Inc. Products by Best-Rite Manufacturing, Poly-Vision Corp. or other manufacturers of similar quality, design and function will be considered for approval as an equal upon submission of adequate supporting data.

B. Markerboards – Dry markerboards shall be of porcelain enameled steel with the following construction:

1. Face sheet – Vitreous porcelain enamel non-porous, stain resistant writing surface on 24-gauge LCS markerboard. Surface shall be “low gloss.”
2. Core material – 7/16-inch medium density fiber board.

3. Panel backing:

   a. .005-inch aluminum foil for boards up to and equal to **4 ft. and 8 ft. high**.

   b. 26-gauge galvanized steel for all boards over 4 ft. and longer than 8 ft.

4. Dimensions as indicated on the Drawings. Colors as selected by Architect.

5. Markerboards at Gym and Project Areas shall be provided without marker trays.

C. Tackboards – Tackboards shall be of with the following construction:

1. Tacksurface – Linoleum resilient tackable surface material "Claridge Cork" or "Bulletin Board" as manufactured by FORBO Linoleum, Inc. Hazeton, PA, or approved equal. Tacksurface material shall be of natural materials consisting of linseed oil, granulated cork, resin binders and dry pigments mixed and calendared onto a natural burlap backing. Color shall extend throughout the ¼ inch thickness of material.

2. Core Material – ¼-inch hardboard.

3. Dimensions as indicated on the Drawings. Colors as selected by Architect.

D. Trim – Markerboard and tackboard trim shall be satin anodized extruded aluminum with 1 ¼ in. face-Series 3 with the following accessories:

1. Markertray (only at markerboards), markerboard frame, tackboard frame, maprails with cork insert and provisions for accessories.

2. Flag holder: Provide one flag holder at the maprail in Conference 106, PT 155, SPED Conference 161, OT 153, EL 255, Title 1 222. Note: Flags and staffs are N.I.C. Flag holder shall be angled up at 45° from face of wall.

3. No map hooks are required.

2.02 ROLLING MARKER BOARD

A. To establish a level of quality, performance and design, rolling marker board and associated hardware shall be based on "Claridge Horizontal Sliding Unit." Two mounted panels **without** housing, but including hanging track and bottom channel in custom sizes and configurations as shown on Drawings.

1. Other manufacturers of full sliding door assemblies permitted if their product conforms to the details of the drawings Walker Products, Best-Rite or approved equal. Key features of approved assemblies are: narrow head and sill profiles and no jamb extrusion/frame.

2. Marker board shall hang on aluminum tracks, with nylon ball bearing rollers. Hangers shall be adjustable. Aluminum bottom guide channels shall prevent board from swinging perpendicular to direction of sliding operation.

3. Fascia shall include +/-3 in. wide tack surface. Forbo or equal as specified herein where called for on the Drawings.

4. Top and bottom tracks in custom length to match casework openings.

5. Galvanized steel backing sheet 26-gauge at all oversized boards greater than 4 ft. high and/or 6 ft. wide. Boards shall neither cup nor bind.

B. Marker boards shall conform to all provisions of specification specified in this SECTION.

C. Marker boards shall be custom sized as shown on the Drawings. Markerboards shall fit to millwork openings, including hardware.

D. Millwork cases shall not deflect or warp due to load of marker boards.

E. Operation shall be adjusted to be smooth and unimpeded. Doors shall be leveled and remain in the location where placed (both in open and closed positions).

PART 3 EXECUTION

3.01 MARKERBOARDS, TACKBOARDS AND TRIM

A. Install all panels in strict accordance with manufacturer's requirements and the approved shop drawings. Markerboards and tackboards shall be secured by mechanical fasteners only in accordance with paragraph B, below, such that the boards may be relocated at a future date without damaging the wall finish. No adhesives of any kind shall be used between the markerboards / tackboards and the various wall substrates, including but not limited to gypsum wallboard, tile, CMU and millwork.

B. Secure panels and cases to metal studs, furring and masonry substrates using "blind" mechanical fasteners wherever possible. Fasteners shall not exceed 16 inches on center spacing.

C. Furnish and install panels in lengths to minimize end jointing, in accordance with the Contract Documents and approved shop drawings. Where required, field cut and fit and fill ends of panels for a tight butt joint.

END OF SECTION

SECTION 101400

IDENTIFYING DEVICES

PART 1 GENERAL

1.01 GENERAL PROVISIONS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish and install custom fabricated signs including all accessories and mounting devices as shown on the Drawings and specified herein.

1. Exterior Signage
    a. Pin mounted letters at stone wall.
    b. Vinyl letters / numbers at exterior doors (both interior and exterior faces)
    c. Rigid polyurethane foam site signs and mounting hardware at entry drive.
2. Interior Signage
    a. Directional blade signs (ceiling and / or wall mounted) at corridors
    b. Room identification signage
    c. Evacuation signage
    d. Pin mounted and soffit hung “Free-standing” letters
    e. Silkscreen vinyl wall films with custom graphic images
    f. Decorative polyester window film
    g. Circular LED light boxes with custom graphic images
    h. Circular discs with custom graphic images
    i. Health sanitation signs in food service areas
    j. Projecting “V” fire extinguisher location signs.

B. Install the following furnished by the designated SECTIONS:

1. **Dedication plaques provided by Owner.**

C. LEEDv4-S General Requirements:

1. The work of this section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEEDv4-S Certification at "Silver" Level is an Owner Requirement that is critical to secure project funding from the Massachusetts School Building Authority. LEEDv4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.

2. Meet the LEEDv4-S requirements for MR Credit 2, Building Product Disclosure and Optimization – Environmental Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers' product documentation for each product having an Environmental Product Declaration (EPD).

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following work is to be performed under the designated SECTIONS:

1. Traffic and site signage: SECTION 101453 — TRAFFIC SIGNAGE.

2. Roof flashing at entry canopy sign: SECTION 070002-ROOFING AND FLASHING.

3. Blocking for the attachment to GWB walls and ceilings for the work of this SECTION: SECTION 061000-ROUGH CARPENTRY.

4. Painted stenciling above ceilings at fire rated partitions: SECTION 092116-GYPSUM WALLBOARD.

5. Level 5 finish as required for the work of this Section: SECTION 092116-GYPSUM WALLBOARD.

6. Priming at level 5 GWB finish as required for work of this Section: SECTION 090007-PAINTING.

7. Grid and tile to support the ceiling mounted work of this SECTION: SECTION 090003-ACOUSTICAL TILES.

8. Permanent signage on Elevator Control Room door and at the main floor elevator entrance head condition on the frame: SECTION 140001-ELEVATORS.

9. Signage associated with Rescue Assistance System: SECTION 260001-ELECTRICAL.

10. Stone and mortar at site wall supporting the work of this SECTION: SECTION 040001-MASONRY.

11. Granite sign posts: SECTION 323000-MISCELLANEOUS SITE IMPROVEMENTS.

12. Fire extinguishers and cabinets: SECTION 102600-PREFABRICATED SPECIALTIES.

1.04 SUBMITTALS

A. Submit complete shop drawings in accordance with the requirements of SECTION 013300-SUBMITTALS.

B. Product Data: Submit manufacturer's product data on each type of sign including:

1. Standard mounting details
2. Supporting test data for flame spread index and smoke developed index
3. O&M care guidelines

C. Shop Drawings:

1. Shop drawings showing typical exterior and interior signs (one of each type), and signs with longest room names.
2. Shop drawings signage shall include large scale details showing sign construction and method of attachment.
3. Shop drawings shall show a scaled drawing of the entire wall for the signage with the size and type of lettering specified. Furnish color chips for selection of each type of letter and each type of sign.
4. Sign schedule including columns with headings: sign type, room number and room name, quantity, sign text and "notes" on special mounting instructions when applicable.

D. Samples:

1. Standard color selection chips and anodized aluminum finishes.
2. Vinyl samples of available colors for approval.
3. One interior sign of each type including one blade sign, one room identification sign, one evacuation map, one health sign and one fire extinguisher "V" sign.
4. One minimum 6 in. x 6 in. sample of painted polyurethane sign showing all chosen colors, example of incised lettering, ogee profile, trim and light wood grain texture on the field.
5. One exterior cut aluminum letter, in approved size, font and finish with mounting hardware.
6. One interior cut aluminum letter, in approved size, font and finish with mounting hardware.
7. Two minimum 24 in. x 24 in. examples of full color, scaled printed vinyl wallcovering showing art provided by the Architect.
8. Two samples numerals for exterior vinyl applied letters in each of two approved colors.

E. LEED for Schools Submittals (Refer to SECTION 013300-SUBMITTALS):

1. Relevant supporting documentation required by LEED for Schools v4 and as detailed in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
2. A completed LEED MATERIALS REPORTING FORM, per SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
3. Product substitution requests are subject to additional LEEDv4-S submittal requirements, see SECTION 012500-SUBSTITUTION PROCEDURES.

PART 2 PRODUCTS

2.01 MANUFACTURE

A. Custom fabricated signs as manufactured by Batten Brothers, Inc., Wakefield, MA, Barlo Signs, Hudson, NH, Merrimack Engraving and Marking Co., Methuen, MA, or approved equal as specified herein.

2.02 EXTERIOR SIGNS

A. Sign types are as follows. Refer to drawings for dimensions, font type, font size, construction and mounting details.

1. Pin Mounted Sign at Stone Wall

   a. Cut aluminum letters, ½-in. thick

   b. Text: "SGT JORDAN SHAY MEMORIAL LOWER ELEMENTARY SCHOOL"

   c. Typeface and Size: Future Medium, 8 inches tall and 6 inches tall

   d. Mounting: Letters to be pin mounted on ½-inch standoffs to stone wall.

   e. Finish:

      1) Letters: Matte Bronze Anodized Aluminum with one satin clear coat.

      2) Pin-Mounting Support Hardware: Two satin acrylic polyurethane color coats, spray applied. One custom color chosen by the Architect.

2. Site Sign at Entry Drive

   a. High density closed cell polyurethane foam sign panel with formed ogee frame, incised letters and mounting hardware required to attach to granite posts.

   b. To establish a level of quality, design and function, specification is based on "SP4-18" by Sign-Arts Product Corp., Laguna Hills, CA. Similar polyurethane foam sign panels will be considered equal upon receipt of adequate supporting data and samples.

   c. HDC properties:

      1) Density: 18 pcf or greater

      2) Compressive Strength: 860 psi or greater

      3) Finish: Paint, in up to five colors as chosen by the Architect.

   d. Hardware: Black powder coated metal attachment clips and expansion bolts.

e. Location: 193 Lions Mouth Road, at entry driveway.

f. Text and Graphic: See attached Sign Type “A”.

g. Quantity: Two panels mounted back-to-back at one pair of granite posts.

3. Vinyl Applied Letters

a. Numerals at all exterior doors, two sets required at each door (one each facing inside and outside)

b. Block style letters to be minimum 4 in. high.

c. Mount to glass, aluminum and painted hollow metal doors.

d. Numbering of doors shall be approved by APD and AFD.

e. Up to two colors to provide contrast at transparent and opaque applications will be chosen by the Architect.

2.03 INTERIOR SIGNS

A. Sign types are as follows. Refer to drawings for dimensions, font type, font size, construction and mounting details.

1. Wall and Ceiling Mounted Blade Signs at Corridors

a. Text: Text, size of text and graphics as shown on the attached drawings.

b. Font: Helvetica

c. Location: As shown on the attached schedule.

d. Construction: Refer to the attached drawing for fabrication, finish and dimensions.

e. Mounting: Extruded aluminum wall and ceiling brackets.

f. Coordinate locations with wall blocking and ceiling supports.

2. Room Identification Signs

a. Text: Text, size of text and graphics as shown on the attached drawings.

Raised vinyl letters and numbers (1/32 inch) with integral Raster Braille. Vinyl lettering with removable insert.

b. Font: Helvetica

c. Location: As shown on the attached schedule.

d. Construction: Refer to the attached drawings for fabrication, finish and dimensions.

e. Mounting: Mounted to glass or wall surfaces utilizing heavy-duty double faced tape.

3. Evacuation Signs

   a. Text: As shown on the attached drawings. Artwork shall be provided by the Architect.

   b. Font: Helvetica

   c. Location: As shown on the attached schedule.

   d. Construction: Refer to the attached drawing for fabrication, finish and dimensions.

   e. Mounting: Mounted to glass or wall surfaces utilizing heavy-duty double-faced tape.

4. Cut Aluminum Letters

   a. Finish: Matte natural anodized aluminum with one satin clear coat, spray applied. Anodized color will be confirmed by the Architect from full line of anodized finishes.

   b. Typeface: Futura Medium

   c. Large, free-standing, pin mounted letters:

      1) Text: "GYMNASIUM"
         "MEDIA CENTER"

      2) Size: 12 inches tall, ½-inch thick

      3) Locations: One each of text noted above, as shown on the interior elevations.

      4) Mounting: Individual letters pin mounted to interior walls on 3/8-inch standoffs.

   d. Small, free-standing, pin mounted letters:

      1) Text: "WELCOME"

      2) Size: Six inches tall, ¼-inch thick

      3) Location: One at Main Entry Vestibule

      4) Mounting: Individual letters pin mounted to millwork on ¼-inch standoffs

   e. Soffit Hung Letters:

      1) Text: "MAIN OFFICE"
         "CAFETERIA"

      2) Size: Six inches tall, ¼-inch thick

      3) Location: One each of text noted above as shown on the interior elevations.

4) Mounting: "Free-standing" letters mounted to ¼-inch thick aluminum angle bracket with supports following the shape of the letters. Back leg of angle bracket 2 inches wide with countersunk flathead screws to attach through soffit as detailed on the Drawings.

5) Finish:

i. Letters: As specified above

ii. Mounting Bracket and Screws: Two satin acrylic polyurethane color coats, spray applied to match soffit color.

iii. Full Assembly: One satin clear coat, spray applied.

5. Printed Vinyl Wallcovering

a. As shown on Interior Elevation Drawing sheets 5.4.06-5.4.08 and Millwork Drawing 5.6.12.

b. Location: First floor main lobby (feature wall), ground floor (elevator alcove), second floor (media center entry).

c. See interior elevation drawings for approximate sizes.

d. Mount to primed level 5 finish GWB.

e. At the Media Center and where otherwise indicated on the Drawings, printed film wallcovering shall be magnetic: MagnaMedia VM-Polyeight UV or equal.

f. Graphics to be provided by the Architect in electronic format.

6. Pre-Manufactured Circular LED Lightboxes at Feature Wall

a. Approved manufacturer: Smart Frame, 347 W. 36th Street, Suite 300, New York, NY 10018, or approved equal.

b. Finish: Clear satin anodized.

c. Sizes: 18 inch, 24 inch and 30 inch – See Interior Elevations for quantity of each size.

d. Coordinate power and connectivity to control panel.

e. Provide and install custom full colored graphics at the face of all lightboxes. Graphics to be provided by the Architect in electronic format.

7. Feature Wall Control Panel

a. Location: First floor main lobby (feature wall)

b. Finish:

1) Panel to be satin stainless steel, size as noted on the Drawings.

2) Push buttons to be printed acrylic, size as noted on the Drawings. Graphics to be provided by the Architect in electronic format.

c. Provide low voltage connection from control panel to each circular LED lightbox.

8. Premanufactured Circular "Puck" Signs (Unlighted)

a. Match construction of circular light boxes in paragraph 2.03.A.6 including material, finish and graphics.

b. Size: 12-inch diameter, ¼-inch thick (no light box)

c. Mounting: Pin mounted on 1-inch standoffs

d. Finish: Clear satin anodized

e. Quantity: Seven

f. Location: East wall of Lobby at first and second floors as shown on the interior elevations.

9. Dusted / Frosted Decorative Polyester Window Film

a. Location: Mail-Duplicate-Records Room No. 102

b. Mounting: Self-adhered to glass surfaces.

c. Crystal Glass Finishes 7725SE-314 Dusted Crystal as manufactured by 3M or approved equal.

d. Locations as shown on the Drawings.

10. Health / Sanitary Signs

a. Location: Kitchen, Servery, Recycle Room, (Kitchen) Toilet

b. Signs shall be by Seton Identification Products, Inc., Safety Sign, Uline or other equals upon receipt of adequate supporting data and samples.

c. Materials: Acrylic, polyethylene or aluminum

d. Mounting: Mount to wall surfaces or food service equipment at all sinks in all food service areas using heavy duty, double-sided tape.

e. Text sizes and quantities:

1) "Handwash Sink Only", minimum 8 in. x 10 in., at handwash sinks (5 locations).

2) "Prep Sink Only", minimum 8 in. x 10 in. at prep sink (1 location).

3) "Employees Must Wash Hands Before Returning to Work", minimum 8 in. x 10 in. at Kitchen toilet (1 location).

4) "Wash Your Hands" instructional sign with graphics, min. 8 in. x 10 in., location: all handwash sinks in food service areas and Kitchen toilet (6 locations).

5) Two similar signs with messages to be determined by Owner. Size: Minimum 8 in. x 10 in. Locations to be determined.

f. Final selection of signs is subject to the approval of the Amesbury Board of Health.

11. Projecting "V" Fire Extinguisher Location Signs

a. Location: Wall mounted at 7'-0" AFF above all fire extinguishers both in cabinets and wall mounted.

b. Signs shall be by Brady, Emedco, MySafetySign or others upon receipt of adequate supporting data and samples.

c. Materials: Acrylic, red and white with extinguisher graphic, arrow point down and text reading "FIRE EXTINGUISHER".

d. Size: 6 in. H x 8 in. W.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of work.

B. Verify that items provided under other sections of Work are sized and located to accommodate signs. Coordinate locations of required blocking and other supports with the specified trades.

C. Examine supporting members to ensure that surfaces are at elevations indicated or required to comply with authorities having jurisdiction and are free from dirt and other deleterious matter.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. General: Locate signs and accessories where indicated, using mounting methods of types described and in compliance with manufacturer's written instructions.

1. Install signs level, plumb, and at heights indicated, with sign surfaces free from distortion and other defects in appearance.

3.03 CLEANING AND PROTECTION

A. After installation, clean soiled sign surfaces according to manufacturer's written instructions. Protect signs from damage until acceptance by the Architect.

SECTION 101453

TRAFFIC SIGNAGE

PART 1 GENERAL

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish and install the following, as shown on the drawings and specified herein:

1. Parking, traffic and miscellaneous site signs.
2. Electronic school zone signals (solar powered)

B. Install and remove temporary signs on posts as shown on the Phasing Drawings.

C. LEEDv4-S General Requirements:

1. The work of this section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEEDv4-S Certification at "Silver" Level is an Owner Requirement that is critical to secure project funding from the Massachusetts School Building Authority. LEEDv4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.
2. Meet the LEEDv4-S requirements for MR Credit 2, Building Product Disclosure and Optimization – Environmental Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers' product documentation for each product having an Environmental Product Declaration (EPD).

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be performed under the designated SECTIONS:

1. Concrete bases for signs: SECTION 033000-CAST-IN-PLACE CONCRETE.
2. Excavation and backfill: SECTION 312000-EARTHWORK.
3. Handicap accessibility parking signage: SECTION 321700-PAVING SPECIALTIES.
4. Painted pavement markings: SECTION 321700-PAVING SPECIALTIES.

5. Interior signage, building mounted and other exterior signs: SECTION 101400-IDENTIFYING DEVICES.

1.04 SUBMITTALS

A. Submit complete shop drawings in accordance with the provisions of SECTION 013300-SUBMITTALS for the following:

1. Parking, traffic and miscellaneous site signs, including scaled drawings of each sign indicating size, text and colors.
2. Sign layout plan shall include orientation to road, curb or sidewalks, expressed as parallel, perpendicular or at a specified angle.
3. Flashing school speed limit assembly including foundation and post details and dimensions.

B. Manufacturers literature for the following:

1. Parking, traffic and miscellaneous site signs.
2. Flashing school speed limit assembly including flashers and solar power equipment.

C. LEEDv4-S Submittal Requirements

1. Relevant supporting documentation required by LEED for Schools v4 and as detailed in SECTIOM 018113-SUSTAINABLE DESIGN REQUIREMENTS.
2. A completed LEED MATERIALS REPORTING FORM, per SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
3. Product substitution requests are subject to additional LEED-S submittal requirements, see SECTION 012500-SUBSTITUTION PROCEDURES.

1.05 REFERENCES

A. Section 800 of the MassDOT Standard Specifications

B. Manual on Uniform Traffic Control Devices (MUTCD)

C. Equipment and Materials Standards of the Institute of Transportation Engineers (ITE).

PART 2 PRODUCTS

2.00 LEEDv4-S PRODUCT REQUIREMENTS

A. Products and materials used for this section of the work are required to meet the following criteria for LEEDv4-S materials Credits, and a completed LEEDv4-S MATERIALS REPORTING FORM shall be submitted for all materials in this SECTION:

1. Recycled Content. (See Section 018113-Sustainable Design Requirements for overall project recycled content requirements.) Contractor shall examine each product or material specification below for a stated minimum recycled content requirement, and if none is stated, the requirements under 018113 shall govern.

2. Regional Content. (See Section 018113-Sustainable Design Requirements for overall project regional content requirements.) Contractor shall examine each product or material specification below for a stated minimum regional content requirement, and if none is stated, the requirements under 018113 shall govern.

2.01 TRAFFIC, PARKING AND MISCELLANEOUS SITE SIGNS

A. Signs shall conform to the requirements of Section 828 Traffic Signs of the Standard Specification and include the following materials:

1. Aluminum street sign and steel poles will be fabricated as specified herein.

2. Pole shall be hot-dipped galvanized, 2 in. x 2 in., min. 14 ga., pre-punched post conforming to ASTM-A1011 Grade 50. Provide break-away fittings at base of posts equal to Snap 'N Safe #S200.

3. Hardware for mounting sign panels shall be galvanized 5/16 in. x 2-1/2 in. bolts, locknuts and washers.

4. Painted sign finish will be series 59,000 alkyd enamel silkscreen ink as manufactured by Nazdar Co., Chicago, IL, or approved equal. The topcoat protective finish will be Matte Hard Gard catalyzed urethane coating as manufactured by Duncan Galvanizing Corp., Everett, MA, or approved equal. The white text and border for the sign will be 3M reflective, engineering-grade adhesive backed polyester that is precut for application.

5. Concrete for footings shall be air entrained concrete conforming to the requirements and applicable provisions of Section M4.02 of the Standard Specifications. Minimum 28-day compressive strength shall be 4,000 psi/3-Mpa. Concrete shall be air-entrained 7% minimum +/- 1%, with a two (2) inch to four (4) inch slump. Aggregate size shall be a maximum of three quarter (3/4) inch. Forms for footings shall be sonotubes with the required diameter for the footings as shown on the drawings.

2.02 TYPES AND QUANTITIES

A. Refer to the Drawings for sign types and quantities of parking, traffic and miscellaneous site signs:

1. Permanent site signs as shown on traffic and striping plan and detail sheets: 3.9.16-3.9.19, inclusive.

2. Temporary signs required during construction for the continuing operation of the Cashman Elementary School as shown on the Phasing Drawings: G.0.04-G.0.08, inclusive.

3. Ten additional pole mounted signs, including poles, each no greater than 30 in. x 30 in., as required by the School Department or Amesbury Regulatory Agencies. Text, type, size and location to be determined.

2.03 SOLAR POWERED ELECTRONIC SCHOOL ZONE SIGNS

A. All equipment including the aluminum signal pole and signal base, signal housings, amber LED flashing signals, solar panel, arm assemblies used to mount the signals and solar panel to the pole, cabinet, including control panel, timer, solar charge controller and battery, all cable and wiring, ground rods, equipment grounding and bonding, and all other equipment and materials necessary to provide a fully operational high visibility school zone system.

B. To establish a standard of quality, design and function, specifications are based on “Traditional Beacon” as manufactured by Solar Light International; “Solar TC-18” by ELTEC, “R829-G” by Carmanah. Similar assemblies by others will be accepted by the Architect upon submittal of adequate supporting data.

C. Aluminum Signal Pole:

1. Signal posts and bases shall be aluminum shafts with cast aluminum bases.

2. Signal base foundations shall not obstruct a sidewalk or crosswalk in any way that passage by physically-challenged persons is impaired.

3. Signal pole shall be a minimum 14 foot tapered aluminum pedestal pole with an internally lockable (Type II police lock).

4. Pole assembly shall be grounded.

D. Solar Panels:

1. Panel shall be self-cleaning, impact resistant, with a highly transmissive tempered glass cover and aluminum alloy extruded frame or similar approved construction.

2. Photovoltaic panel shall be rated as required for specified performance, minimum 20 watts.

3. Approximate size of panel: 15 in x 20 in x 2 in.

4. Aluminum mounting arm to mount panel to the pole engineered to withstand up to 90 mph wind speeds.

E. Cabinet:

1. Minimum 10 ga. aluminum cabinet with single gasketed door, with rain proof louvers on sides with insect screens.
2. Nominal Dimensions: 24 in x12 in x8 in
3. Door shall have standard police lock, two keys included.

F. Controls: All controls shall be rated to function in full range of extreme temperatures recorded in Amesbury MA:-30C to +40C.

1. Solar Charge Controller to modulate battery charging and indicate charge level.
2. Programmable Time Clock: annual program, programmable via keypad or software from a PC via cable. Programming must include leap year and daylight savings adjustment functions.
3. Flasher: Solid state, capable of producing 35-70 flashes per minute as programmed.

G. Battery:

1. Sealed maintenance free, deep cycle, AGM lead acid type 12 volt battery.
2. Capacity: as required for specified performance, minimum 35 ampere hour (ah).
3. Valve regulation with a discharge rate of less than 1% per month, at 68°F.

H. Signals:

1. Traffic signal lenses shall be 12 inches in diameter and equipped with light emitting diode (LED) modules and aluminum or polycarbonate cut-a-way visors.
2. Bracket mounted 12-inch amber LED flashing top signal above the sign and bracket mounted 12-inch amber LED flashing signal below the sign.
3. Mounting hardware as required to mount to the pole

I. Amber LED Vehicle Signal Module:

1. Any equipment that has been type-tested and approved according to section 815.21 of the Standard Specifications.

2. Modules shall meet Minimum Luminous Intensity values of Table 1, Section 4 of the ITE specification of compliant signal modules at 25 degrees Celsius at provided voltage, throughout the useful life based on normal use in traffic signal operation over the operating temperature range. The LED sources shall be AlInGap type or equal.

3. Optical and Light Output Requirement: The minimum luminous intensity values and light output shall be maintained within the rated input voltage provided by the solar panels and battery pack.

4. The LED signal module shall be a single, self-contained device, not requiring on-site assembly for installation.

5. An independent laboratory shall certify that the LED signal module complies with Section 6: Quality Assurance of the ITE LED Specification.

6. On the backside of the LED signal module there shall be a permanently marked “up” arrow to aid in the proper orientation of the module during installation.

7. The manufacturer’s name, trademark, serial number and other necessary identification shall be permanently marked on the backside of the LED signal module.

J. Sign Panels:

1. The sign panels shall conform to MUTCD sign types S4-3P, R2-1 and S4-4P.

2. The signs shall be mounted on the pedestal pole immediately below the top LED signal head and immediately above the bracket mounted LED signal head.

3. Refer to drawings for dimensions and positions of the three sign panels.

K. Finishes:

1. All traffic signal posts and bases, signal housings, visors, controller cabinets, service meter socket boxes, mounting brackets and hardware shall be clear anodized aluminum to match existing electronic school zone assembly located on Lions Mouth Road at the intersection with Baker Street.

PART 3 EXECUTION

3.01 TRAFFIC, PARKING AND MISCELLANEOUS SITE SIGNS

A. Signs shall be located as shown on Drawings.

B. Galvanized all steel before fabrication.

C. Construct posts and signs true to grade with plumb vertical alignment.

D. Signs shall be oriented as shown on the approved shop drawings: Traffic signs generally perpendicular to curbs or as required for traffic management; parking signs generally parallel to curbs and walks.

E. Concrete footings shall be installed per the Drawings using a sonotube for the form. Concrete footing placement, protection and formwork shall be as specified.

F. Multiple signs shall be combined on single poles where practicable. At **no** time shall the lowest panel be less than 6'-8" above grade along any accessible route to comply with provisions of MAAB.

3.02 SOLAR POWERED ELECTRONIC SCHOOL ZONE SIGNS

A. Optical and Light Output Requirement:

1. The minimum luminous intensity values and light output shall be maintained within the rated input voltage of 12volts DC.
2. LED signal modules shall not be allowed to fall short of the minimum intensity values at any of the 44 measuring points of the standard when lamp is turned on cold for measurements and after a 30 minute warm-up time period at 100% duty cycle.

B. Flashing Operation:

1. The flashing operation required for the beacon shall occur as set forth in Section 4L of the MUTCD. Proposed beacons shall flash in an alternating fashion.
2. School zones signs shall flash on the schedule provided by the School Department, which may include the school noon hour, school recess, and during those periods when children are going to or leaving school during opening and closing hours.

END OF SECTION

SECTION 102113

COMPARTMENTS AND CUBICLES

PART 1 GENERAL

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish and install the following items required to complete the work of this SECTION as shown on the Drawings and specified herein:

1. Headrail-braced high-density polymer toilet compartments, complete with doors, hardware, and specified accessories.
2. Floor-mounted headrail-braced high-density polymer urinal screens and hardware.
3. All attachments and reinforcing and additional bracing required for the proper installation of the work of this SECTION and factory drilling for items to be attached to partitions as specified.

B. LEEDv4-S Requirements:

1. The work of this section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEEDv4-S Certification at “Silver” Level is an Owner Requirement that is critical to secure project funding from the Massachusetts School Building Authority. LEEDv4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.
2. Materials Credits: Materials costs and documentation that partitions are manufactured using a minimum 33% post-consumer recycled content.
3. Meet the LEEDv4-S requirements for MR Credit 2, Building Product Disclosure and Optimization – Environmental Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers’ product documentation for each product having an Environmental Product Declaration (EPD).

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be performed under the designated SECTIONS:

1. Plywood backing up gypsum board and cement backer board in toilet room stud walls for the attachment of cubicles and toilet accessories: SECTION 061000-ROUGH CARPENTRY.

2. Furnishing templates for accessories which shall be attached to partitions: SECTION 102813-TOILET AND BATH ACCESSORIES and SECTION 220001 - PLUMBING.

3. Field painting continuous shims where wall brackets span ceramic tile wainscot and upper wall material: SECTION 090007-PAINTING.

1.04 SUBMITTALS

A. Submit complete shop drawings in accordance with the provisions of SECTION 013300-SUBMITTALS.

B. Shop drawings shall include a completely dimensioned layout of all toilet partitions and screens, and large scaled details of all items to be furnished hereunder. Details shall include all sizes and gauges, type of construction, and methods of installation to the surrounding construction.

C. Submit the following samples in accordance with the provisions of SECTION 013300-SUBMITTALS.

1. Manufacturer's standard color chips for all available colors for finishing of metal partitions and related items for selection by the Architect.

D. LEED for Schools Submittals (Refer to SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS):

1. Relevant supporting documentation required by LEED for Schools v4 and as detailed in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

2. A completed LEED MATERIALS REPORTING FORM, per SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

3. Product substitution requests are subject to additional LEEDv4-S submittal requirements. Refer to SECTION 012500-SUBSTITUTION PROCEDURES.

PART 2 PRODUCTS

2.00 LEEDv4-S PRODUCT REQUIREMENTS

A. Products and materials used for this section of the work are required to meet the following criteria for LEEDv4-S materials Credits, and a completed LEEDv4-S MATERIALS REPORTING FORM shall be submitted for all materials in this SECTION:

1. Recycled Content. (See Section 018113 Sustainable Design Requirements for overall project recycled content requirements.) Contractor shall examine each product or material specification below for a stated minimum recycled content requirement, and if none is stated, the requirements under 018113 shall govern.

2. Regional Content. (See Section 018113 Sustainable Design Requirements for overall project regional content requirements.) Contractor shall examine each product or material specification below for a stated minimum regional content requirement, and if none is stated, the requirements under 018113 shall govern.

2.01 TOILET COMPARTMENTS

A. General - Refer to the Drawings for locations and sizes of toilet compartments.

B. Manufacturer - To establish a standard of quality and design desired, specifications have been based on toilet compartments, urinal and shower screens as manufactured by General Partitions Manufacturing Corporation. Similar compartments, urinal screens, and shower screens as manufactured by Ampco Products, Santana Products or equal will be considered for approval by the Architect upon receipt of adequate supporting data.

C. Construction

1. Type - Partitions shall be headrail braced.

2. Doors, Screens, and Partitions - Shall be 1-inch thick solid high-density polyethylene formed under pressure. Solid color throughout. All edges to be machined radius and all sharp edges removed.

3. Pilasters - Shall be same construction as doors and panels. Pilasters are to be anchored to the floor with heavy gauge angle. Top of pilasters to be securely braced with chrome plated headrail with integral crown loafer rail.

4. Hardware - Compartment is to be complete with all hardware and fastenings for a complete installation. Hardware to include wrap around self-closing door hinges, latch, bumper/coat hook and keeper. Latch to be concealed type with emergency access features. All hardware to be aluminum.

5. Fittings - Wall and U brackets to be continuous aluminum extrusions. Door strikes and hinges to be fastened by means of 'one-way' head tamper-proof chrome plated sex bolts. All other screws to be Phillips Head chrome plated. All pilasters to have a 3-inch high stainless steel shoe. Headrails to be manufacturer's standard 'anti grip' extrusion.

   a. Wall Bracket Shims – Where continuous wall bracket spans across ceramic wall tile dado, furnish and install a continuous poplar shim between the wall bracket and the upper non-tiled wall surface. The poplar shim shall be two inches wider than the wall bracket. The poplar shim shall be field painted to match the wall by SECTION 090007-PAINTING.

6. Finish - Doors, partitions, and screens shall be cleaned and finish shall consist of solid high-density polymer, solid color throughout from manufacturer's standard colors.

7. Factory Drilling - Perform all required drilling of holes in toilet partitions as per templates provided by the manufacturer of the items to be attached.

8. Recycled Content: Partitions shall be manufactured using a minimum 33% post-consumer recycled content.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install toilet compartments and urinal screens in strict accordance with the approved shop drawings and the recommendations of the manufacturer.

B. Where compartments and screens are mounted on a wall having a ceramic tile wainscot, install a continuous shim the entire width and length of the upper wall portion of the wall bracket extrusion, to provide constant bearing for attachment.

END OF SECTION

SECTION 102600

PREFABRICATED SPECIALTIES

PART 1 GENERAL

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish and install the following items as shown on the Drawings and specified herein:

1. Fire extinguishers, semi-recessed and fully recessed, stainless steel cabinets and wall brackets with necessary hardware.
2. Cubical curtain and track in Exam/Resting.
3. Stainless steel corner guards in Kitchen.
4. Semi-recessed automated external defibrillator (AED) cabinets, stainless steel with fire department alarm activation and associated signage.

B. Furnish the following for installation under the designated sections:

1. Abrasive nosings for exterior concrete steps: SECTION 321313-SITE CONCRETE.

C. LEEDv4-S General Requirements

1. The work of this section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEEDv4-S Certification at “Silver” Level is an Owner Requirement that is critical to secure project funding from the Massachusetts School Building Authority. LEEDv4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.
2. Meet the LEEDv4-S requirements for MR Credit 2, Building Product Disclosure and Optimization – Environmental Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers’ product documentation for each product having an Environmental Product Declaration (EPD).

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be performed under the designated SECTIONS:

1. Ceiling construction in Exam/Resting: SECTION 090003-ACOUSTICAL TILE and SECTION 092116-GYPSUM WALLBOARD.

2. Partition construction: SECTION 040001-MASONRY, SECTION 062000-FINISH CARPENTRY, SECTION 092116-GYPSUM WALLBOARD, SECTION 090002-TILE.

3. Kitchen hood fire extinguishing system: SECTION 114000-FOODSERVICE EQUIPMENT.

4. Prefabricated elevator penthouse vents: SECTION 230001-HEATING, VENTILATING AND AIR CONDITIONING.

5. Connection of AED cabinet to fire alarm system: SECTION 260001-ELECTRICAL.

5. Room signage and designated stairway signage: SECTION 10400-IDENTIFYING DEVICES.

6. Defibrillator unit: By Owner.

1.04 SUBMITTALS

A. Submit complete shop drawings and product data in accordance with the requirements of SECTION 013300-SUBMITTALS.

B. Include large-scale details of items specified herein, showing proposed methods of anchorage to each type of surrounding structure.

C. LEEDv4-S Submittal Requirements

1. Relevant supporting documentation required by LEED for Schools v4 and as detailed in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

2. A completed LEED MATERIALS REPORTING FORM, per SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

3. Product substitution requests are subject to additional LEEDv4-S submittal requirements. Refer to SECTION 012500-SUBSTITUTION PROCEDURES.

D. Submit the following samples in accordance with the provisions of SECTION 013300-SUBMITTALS.

1. Track section 12 inches long with sample carrier.

2. Samples of curtain 12 inch by 12 inch.

3. Sample of corner guard, 12 inches long.

PART 2 PRODUCTS

2.00 LEEDv4-S PRODUCT REQUIREMENTS:

A. Products and materials used for this section of the work are required to meet the following criteria for LEEDv4-S materials Credits, and a completed LEEDv4-S MATERIALS REPORTING FORM shall be submitted for all materials in this SECTION:

1. Recycled Content. (See Section 018113 Sustainable Design Requirements for overall project recycled content requirements.) Contractor shall examine each product or material specification below for a stated minimum recycled content requirement, and if none is stated, the requirements under 018113 shall govern.

2. Regional Content. (See Section 018113 Sustainable Design Requirements for overall project regional content requirements.) Contractor shall examine each product or material specification below for a stated minimum regional content requirement, and if none is stated, the requirements under 018113 shall govern.

2.01 FIRE EXTINGUISHERS AND CABINETS

A. Multipurpose Dry Chemical: 5 lb. UL 2A-10BC and 3A-40BC by Larsen's Mfg. Co., Minneapolis, MN, JL Industries, Inc., Potter Roemer Division of Smith Industries or approved equal. Overall height and width 15 1/4 inches x 7 ¼-inches, with a 4 ¼-inch cylinder diameter.

B. Pressurized Water: 2 ½-gallon UL 2A by Larson's Mfg. Co., Minneapolis, MN or approved equal. Overall height at width 24 1/2 inches x 9 inches, with a 7-inch cylinder diameter.

C. Wet Chemical: 6 liter capacity, 2A:K in stainless steel container with pressure indicating gauge.

D. Cabinets: Semi-recessed and fully recessed architectural series (with squared edge trim) as scheduled for partition thickness. Finish to be stainless steel with vertical red die cut lettering. Door style to be "Vertical Duo" with clear tempered safety glass door with cylinder lock, having 'Larsen Loc' feature as manufactured by Larsen's Mfg. Co., Minneapolis, MN, or approved equal. Cabinet shall be sized to contain one extinguisher of the type scheduled for that location. Depth of semi-recessed trim to be as necessary by partition type. Fully recessed shall be used at the Gym.

1. Brackets – Where so scheduled, extinguishers shall be surface bracket mounted.

E. Fire extinguisher schedule – Furnish and install the following, locations referenced hereunder and as shown on the Drawings.

FIRE EXTINGUISHER SCHEDULE

Room	Number	Quantity	Type	Mounting
Ground Floor				
Corridor		4	2A	Semi (4)
Platform		1	2A	Bracket
Cafeteria		2	2ABC	Semi (2)
Kitchen		1	2AK	Bracket (1)
Mechanical Room		1	2ABC	Bracket
Custodial Workshop		1	2ABC	Bracket
Servery		1	2AK	Bracket
Teacher Dining		1	2AK	Bracket
First Floor				
Corridor		4	2A	Semi (4)
Main Lobby		1	2A	Semi
Gym		4	2A	Recessed (4)
General Office Kitchenette		1	2A	Semi
Second Floor				
Corridor		4	2A	Semi (4)
Art Storage		1	2ABC	Bracket
Teacher Dining		1	2AK	Bracket
Upper Lobby		1	2A	Semi

2.02 CURTAIN TRACK ASSEMBLY

A. Manufacturer

1. To establish a basis of quality, design and function desired, track and curtain system are based upon Construction Specialties, Inc., Lebanon, NJ.

2. Other products from Imperial Fastener Company, AR Nelson of similar quality design may be considered for approval as an equal.

B. Track

1. Model No. 6062 surface-mounted tracks with a white powder coat finish, slotted to receive roller carriers, complete with accessories and components required for a complete and secured installation including:

a. Cast aluminum ceiling brackets and 3/4 in. square or ¾ in. diameter seamless aluminum tubing at minimum 24 in. o.c. for suspending track from plane of ceiling.

b. Coordinate with metal stud suspension system supporting ceiling brackets through ATC ceiling to structure above by SECTION 092116-GYPSUM WALLBOARD.

2. Track section shall be 1-3/8 inches by 3/4 inches custom fabricated from 6063-T4 aluminum alloy.

3. Carriers: No. 1062N, virgin nylon axle with nylon wheels complete with nickel-plates brass bead-chain and hook assembly.

4. Provide end stops and removable snap outs at track.

C. Curtain

1. Curtain shall be opaque, 100% polyester, flame resistant, washable with nylon mesh No. 40 (open) sewn into top.

2. Coordinate curtain dimensions with installation conditions.

3. Antimicrobial Treatment: Nanotex + BioAM spill and stain resistant treatment combined with an antimicrobial agent.

2.03 CORNER GUARDS

A. Guards shall be 16 gauge type 304 non-magnetic stainless steel with #4 sating finish, as manufactured by Pauling Corporation, Pauling NY, Construction Specialties, Wallguard or approved equal.

B. Guards shall be 48 inches in length, 3 ½ inches x 3 ½ inches x 90 degree angle section, with 1/8 inch radius. Guards shall include stainless steel screws for mounting to concrete masonry unit construction.

C. Guards shall be located in kitchen. Refer to drawings for locations.

2.04 AED RECESSED CABINETS

A. Cabinets: Recessed (with flat trim) scheduled for partition thickness. Finish to be stainless steel with red graphic lettering/symbols with audible local 85dB alarm and door contact for connection to fire alarm system. Door to be tempered glass door type with cylinder lock, Model No. C1435F12, as manufactured by J.L. Industries, Bloomington, MN, or by Larson Manufacturing, or Phillips. Other manufacturers will be considered as an equal by the Architect upon receipt of adequate supporting data and samples.

B. SCHEDULE

Room	Quantity	Location
Ground Floor Corridor C002	1	
First Floor Corridor C102	1	
Second Floor Corridor C202	1	
Nurse's Suite, Nurse 107	1	

2.05 SAFETY TREAD NOSINGS

A. Safety tread nosings shall be cast iron with abrasive cross hatched surface of four inches wide, with concealed anchors, as manufactured by American Safety Tread, Co., Inc. Helena AL. Style 801 or approved equal.

B. Tread nosings shall be located at all site concrete stairs.

PART 3 EXECUTION

3.01 INSTALLATION OF FIRE EXTINGUISHER CABINETS, AED CABINETS AND BRACKETS

A. Install cabinets with necessary hardware in accordance with manufacturer's recommendations. The bottom of the bracket shall be installed 3 ft.-8 in. above the finish floor. Locate cabinets where shown on drawings.

3.02 CURTAIN TRACK ASSEMBLY

A. Suspend the track through suspended ceiling to structure above. Spacing shall be in strict accordance with manufacturer requirements.

B. Coordinate track suspension with pendant lighting fixtures.

3.03 KITCHEN CORNER GUARDS

A. Install to all outside partition corners in the kitchen per the manufacturer's recommendation for the respective partition construction.

3.04 SAFETY TREAD NOSINGS

A. Install safety tread nosings at concrete site steps into new concrete in strict requirements of manufacturer's recommendation and in compliance with applicable codes.

END OF SECTION

SECTION 102813

TOILET AND BATH ACCESSORIES

PART 1 GENERAL

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish the following items for installation under the designated SECTION:

1. All toilet accessories listed under paragraph 2.02 - ACCESSORIES SCHEDULE and installed by SECTION 062000-FINISH CARPENTRY.

B. LEEDv4-S General Requirements

1. The work of this section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEEDv4-S Certification at "Silver" Level is an Owner Requirement that is critical to secure project funding from the Massachusetts School Building Authority. LEEDv4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.
2. Meet the LEEDv4-S requirements for MR Credit 2, Building Product Disclosure and Optimization – Environmental Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers' product documentation for each product having an Environmental Product Declaration (EPD).

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be prepared under the designated SECTION:

1. Installation of wood blocking and plywood sheathing in toilet room walls: SECTION 061000-ROUGH CARPENTRY.
2. Wall construction: SECTION 040001-MASONRY and SECTION 092116-GYPSUM WALLBOARD.
3. Toilet partitions: SECTION 102113-COMPARTMENTS AND CUBICLES.

1.04 SUBMITTALS

A. Submit complete shop drawings in accordance with requirements of SECTION 013300-SUBMITTALS.

B. Shop drawings shall consist of cuts of all items required hereunder with all descriptive data accompanying.

C. LEEDv4-S Submittal Requirements

1. Relevant supporting documentation required by LEED for Schools v4 and as detailed in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
2. A completed LEED MATERIALS REPORTING FORM, per SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
3. Product substitution requests are subject to additional LEED-S submittal requirements, see SECTION 012500 – SUBSTITUTION PROCEDURES.

PART 2 PRODUCTS

2.00 LEEDv4-S PRODUCT REQUIREMENTS

A. Products and materials used for this section of the work are required to meet the following criteria for LEEDv4-S materials Credits, and a completed LEEDv4-S MATERIALS REPORTING FORM shall be submitted for all materials in this SECTION:

1. Recycled Content. (See Section 018113 Sustainable Design Requirements for overall project recycled content requirements.) Contractor shall examine each product or material specification below for a stated minimum recycled content requirement, and if none is stated, the requirements under 018113 shall govern.

2. Regional Content. (See Section 018113 Sustainable Design Requirements for overall project regional content requirements.) Contractor shall examine each product or material specification below for a stated minimum regional content requirement, and if none is stated, the requirements under 018113 shall govern.

2.01 MANUFACTURE

A. To establish a standard of quality, design and function desired, manufacture has been based upon BOBRICK, North Hollywood, CA. Grab bars in Pre-Kindergarten Classroom toilets are based upon BRADLEY, Menomonee Falls, WI. Baby changing tables are based upon American Specialties, Yonkers, NY, and child changing tables are based upon Smirthwaite, New York, NY.

B. Similar toilet and bath accessories by BRADLEY, Mt. Laurel, NJ, American Specialties or other manufacturers of similar hand dryers by Speedflow, Xlerator or other manufacturers with a low dB rating will be considered for approval by the Architect upon receipt of adequate supporting data.

2.02 ACCESSORIES SCHEDULE

A. Refer to the Contract Drawings for quantities, locations, and type listed hereunder.

B.

	Types	Model No.
1.	Grab bars, Bobrick 1-1/4 inch diameter, peened finish stainless steel, for surface mounting.	B-5806.99X42 B-5806.99X36
2.	Pre-K grab bars, Bradley 1 inch diameter stainless steel for surface mounting.	8522-001420 8522-001360
3.	Liquid soap dispenser at all sinks for surface mounting on walls.	Furnished by Owner for installation under SECTION 062000

4.	Bobrick stainless steel framed mirror above sinks with ½ inch bright polished finish channel frame.	B-165 1836 (at sinks mounted 34 inches AFF) B-165 1846 (at sinks mounted 30 inches AFF)
5.	Toilet tissue dispensers, multi roll, for surface mounting.	Furnished by Owner for installation under SECTION 062000
6.	Bobrick surface mounted Feminine Napkin Disposal (at all staff toilet rooms)	B-270
7.	Towel dispenser, for surface mounting on wall (at each hand wash sink in kitchen)	Furnished by Owner for installation under SECTION 062000
8.	Towel dispenser, for surface mounting on wall (at classrooms with sinks).	Furnished by Owner for installation under SECTION 062000
9.	Bobrick custodian's Utility Shelf with mop and broom holder, stainless steel, satin finish, for surface mounting. (Provide one at each mop sink)	B-224.36
10.	ASI baby changing table, nominally 38 in. l x 18 in. w, heavy duty, 400 lb. capacity stainless steel, folding / recess wall mounted (Pre-kindergarten toilets)	ASI-9013
11.	Adjustable electric child changing bench, nominally 48 in. L x 22 in. D (bench surface); Smirthwaite: "High Riser", size 1 (Nurse toilet, ISN toilet)	SW-3081 – Powder Coated Steel
12.	Bobrick coat and hat hook, bright polished stainless steel for installation on room side of all office and classroom doors and all privacy toilet room doors.	B-682
13.	Bobrick stainless steel framed tempered mirror with ½ inch bright polished finish channel frame, custom size.	B-1658-4872 (at PT 155)

PART 3 EXECUTION

3.01 APPLICATION OF ACCESSORIES

A. Installation of toilet accessories, including towel dispensers furnished by Owner, will be performed under SECTION 062000-FINISH CARPENTRY, using fastenings concealed from view as far as practicable, in locations indicated on the Contract Drawings, and in accordance with the approved shop drawings.

END OF SECTION

SECTION 105113

LOCKERS

PART 1 GENERAL

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish and install the following items required to complete the work of this SECTION as shown on the Drawings and specified herein:

1. Lockers and associated accessories to be located in the following areas:
   a. Kitchen staff (Mop 012 at Kitchen)
   b. Custodial staff (Custodian Office 019)
   c. Students (Student Project Areas)
2. All attachments, reinforcing, fillers, and recessed trim required for a complete locker installation.

B. LEEDv4-S General Requirements:

1. The work of this section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEEDv4-S Certification at "Silver" Level is an Owner Requirement that is critical to secure project funding from the Massachusetts School Building Authority. LEEDv4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.
2. Meet the LEEDv4-S requirements for MR Credit 2, Building Product Disclosure and Optimization – Environmental Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers' product documentation for each product having an Environmental Product Declaration (EPD).

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be performed under the designated SECTIONS:

1. Millwork cabinetry and wood framed base for project area student lockers: SECTION 062000-FINISH CARPENTRY
2. Wall construction at staff lockers: SECTION 040001-MASONRY and SECTION 092116-GYPSUM WALLBOARD.

1.04 SUBMITTALS

A. Submit complete shop drawings in accordance with the requirements of SECTION 013300-SUBMITTALS.

B. Include a completely dimensioned layout of all lockers with large-scale details of all items to be furnished hereunder. Include, on details, all sizes and gauges, type of instruction, and methods of installation to the surrounding construction.

C. Submit the following samples in accordance with the requirements of SECTION 013300-SUBMITTALS.

1. Manufacturer's color chips for lockers and related items for selection by the Architect.

D. LEEDv4-S Submittals (Refer to SECTION 013300-SUBMITTALS):

1. Relevant supporting documentation required by LEED for Schools v4 and as detailed in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
2. A completed LEED MATERIALS REPORTING FORM, per SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
3. Product substitution requests are subject to additional LEEDv4-S submittal requirements, see SECTION 012500-SUBSTITUTION PROCEDURES.

PART 2 PRODUCTS

2.00 LEEDv4-S PRODUCT REQUIREMENTS:

A. Products and materials used for this section of the work are required to meet the following criteria for LEEDv4-S materials Credits, and a completed LEEDv4-S MATERIALS REPORTING FORM shall be submitted for all materials in this SECTION:

1. Recycled Content. (See Section 018113 Sustainable Design Requirements for overall project recycled content requirements.) Contractor shall examine each product or material specification below for a stated minimum recycled content requirement, and if none is stated, the requirements under 018113 shall govern.

2. Regional Content. (See Section 018113 Sustainable Design Requirements for overall project regional content requirements.) Contractor shall examine each product or material specification below for a stated minimum regional content requirement, and if none is stated, the requirements under 018113 shall govern.

3. Furnish any paints and coatings such that they meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in Section 018113-SUSTAINABLE DESIGN REQUIREMENTS.

2.01 LOCKERS

A. General – Refer to the Drawings for locations and quantities of lockers.

B. Manufacturer – To establish a standard of quality and design desired, specifications have been based on standard metal series lockers as manufactured by Lyons Metal Products, Inc. Similar lockers as manufactured by Penco Products, Inc. and Republic will be considered for approval by the Architect upon receipt of adequate supporting data.

C. Construction: Standard Lockers

1. Materials – Parts to be made from mild cold-rolled sheet steel free from surface imperfections and capable of taking a high grade enamel finish.

2. Doors – To be formed from one sheet of 16-gauge steel. Bottom and top edges to be flanged, and vertical side edges to be formed channel shape. Single tier doors to be hinged at a minimum of three points. Louvers shall be provided at tops and bottoms of doors in groups of six.

3. Hinges – To be .050-inch steel, five knuckle type, projection, welded to the door frame and riveted to the side flange of the door.

4. Handles – Recessed, plated zinc die cast handle with silencer and provisions for separate padlock and a plate allowing retrofit of integral combination lock.

5. Latching Device – To be positive automatic, by means of a spring actuated steel locking channel enclosed by a formation on the door, engaging with the door jamb opposite hinges. Device shall be pre-locking permitting self-latching without manipulation of the door handle.

6. Frame – Shall be sheet steel, formed channel shape. Uprights and cross members shall be 16 gauge and electrically projected welded. Backs, sides, shelves, tops and bottoms to be 24-gauge sheet steel.

7. Tops – Individual flat tops fabricated of 24-gauge sheet steel. Sloping continuous hoods of 20-gauge sheet steel are to be furnished in addition to flat tops at kitchen and custodial lockers only.

8. Bases – Furnish and install lockers with legs at free standing kitchen and custodial lockers only. Project Area lockers shall be installed on wood framed base.

9. Trim – Furnish and install enameled steel fillers and recessed trim as shown on the drawings and required by installation conditions.

10. Finish – All steel parts shall be thoroughly cleaned and coated in a five (5) stage zinc/iron phosphatizing process and then finished with a heavy, drip-free coat of finest grade enamel and thoroughly cured in a baking oven at proper temperature.

    a. Project area lockers shall be painted a custom color to be selected by the Architect.

11. Locker sizes and types as follows (refer to drawings for quantities and location):

    a. Kitchen (Minimum 5 required. See Floor Plan – RM 012): Single tier, 12 inches wide x 15 inches deep x 72 inches high, (not including base) with hat and coat hooks, hat shelf, numbers, base and sloped tops.

    b. Custodial (Minimum 6 required. See Floor Plan – RM 018): Single tier, 12 inches wide x 15 inches deep x 72 inches high, (not including base) with hat and coat hooks, hat shelf, numbers, base and sloped tops.

    c. Project Areas (400 Students, 200 double-tier units required): Double tier, 15 inches wide x 15 inches deep x 48 inches high (each student unit 24 in. high) with hat and coat hooks, hat/book shelf and numbers for recessed installation in millwork.

12. **Lockers shall comply with Massachusetts Architectural Access Board (MAAB) requirements as follows:**

    a. At a <u>minimum</u> there shall be one accessible locker in each grouping or location and at least 5% of the total grouping.

    b. At least 5% of <u>all</u> lockers shall be accessible and distributed as directed by Architect.

PART 3 EXECUTION

3.01 INSTALLATION – LOCKERS

A. Install lockers in strict accordance with the approved shop drawings and the recommendations of the manufacturer.

B. Coordinate locker layout and installation with adjacent construction.

END OF SECTION

Division 11
Equipment

SECTION 113100

APPLIANCES

PART 1 GENERAL

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish and install the following appliances required to complete the work of this SECTION, as shown on the Drawings per the schedule of appliances specified herein.

1. Full-height refrigerator/freezers
2. Undercounter refrigerators
3. Countertop microwaves
4. Undercounter icemakers with drain pump
5. Stacked washer/dryer

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be performed under the designated SECTIONS:

1. Blocking in conjunction with wall cabinets: SECTION 061000-ROUGH CARPENTRY.
2. Plumbing Connections: SECTION: 220001-PLUMBING.
3. Electrical connections: SECTION 260001-ELECTRICAL.
4. Food service equipment: SECTION 114000-FOOD SERVICE EQUIPMENT.
5. Millwork: SECTION 062000-FINSH CARPENTRY.

1.04 SUBMITTALS

A. Submit product data sheets for appliances in accordance with the provisions of SECTION 013300-SUBMITTALS.

PART 2 PRODUCTS

2.01 MANUFACTURER

A. To establish a standard of quality, design and function, appliances are based on the following: Countertop microwaves are based on KitchenAid; washer/dryers are based on UniMac; refrigerators are based on General Electric; ice maker is based on Scotsman.

B. Other manufacturers will be considered as an equal by the Architect upon receipt of adequate supporting data.

2.02 FULL HEIGHT REFRIGERATOR / FREEZER

A. Basis of Design – Model GTE19JSNRSS as manufactured by General Electric. Frigidaire FTR 202ITS; Whirlpool WTR318FZDM or equal will be considered for approval by the Architect upon receipt of adequate supporting data.

1. Size: 19.1 cu. ft. capacity, 29-3/4 in. wide x 32-3/8 in. deep (without handle) x 66-3/8 in. high.
2. Top mounted frost-free freezer section.
3. Door design for tall bottle storage, stainless steel finish, reversible doors.
4. Electrical Rating: 120V, 60Hz, 15 amp.
5. Energy Star qualified.
6. ADA compliant.

2.03 UNDERCOUNTER REFRIGERATOR

A. Basis of Design – Model GCE06GSHSB as manufactured by General Electric. Uline UCO1224FS00B or equal will be considered for approval by the Architect upon receipt of adequate supporting data.

1. Size: 5.6 cu. ft. capacity, 23-5/8 in. wide x 23-1/4 in. deep without handle x 34-1/8 in. high.
2. Freezer section.
3. Stainless steel door.
4. Electrical Rating: 120v, 60Hz, 15 amp.
5. Energy Star qualified.
6. ADA compliant.

2.04 MICROWAVE (COUNTERTOP)

A. Basis of Design – Model KMCS1016GSS microwave as manufactured by KitchenAid; Frigidaire: FFM01611LS; LG: LMC157SST or an approved equal upon receipt of adequate supporting data.

1. Size: 21-3/4 in. wide x 17-1/4 in. deep x 13 in. high.
2. Capacity: 1.6 cu. ft.
3. 13-1/2 inch turntable recessed into the microwave.
4. Electrical Rating: 120v, 60Hz, 15 amp, 1200 watts.
5. Stainless steel exterior, powder coat interior finishes.
6. ADA compliant.

2.05 UNDERCOUNTER ICEMAKER

A. Basis of Design – Model CU50GA-1 with A39462-021 drain pump conversion kit as manufactured by Scotsman or approved equal manufactured by Sub-Zero, ACME, MARVEL or other manufacturers upon receipt of adequate supporting data.

1. Produces 65 lbs. ice/24 hours with 26 lbs. ice storage capacity.
2. Built-in drain pump or drain pump conversion kit.
3. Stainless steel front door panel, black kick plate extension.
4. Size: 34.375 in. high (without legs) x 14.875 in. wide x 22 in. deep.
5. Electrical Rating: 115V, 15 Amp (power cord).
6. Energy Star qualified.

2.06 STACKED WASHER/DRYER

A. Basis of Design – Shall be of the same manufacturer and shall include all necessary stacking accessories for a complete installation. Model LTUA7A by UniMac or an approved equal by General Electric, Frigidaire or others upon receipt of adequate supporting data.

1. Size: 27 in. x 28 in. x 75 ¼ in. high
2. Power: 30 amps circuit – 120/280/60/1 – cord and plug; 20 amps circuit – 120/60/1 – cord and plug.
3. Water Factor: Less than 7.5 gallons/ft^3/cycle
4. Certification: Unit shall be Energy Star compliant and CEE qualified.

5. Description: Washer shall be all standard construction with white exterior, see-thru door with heavy-duty stainless steel hinge, 2.84 cubic foot front loading basket, detergent dispensers, rotary controls, four wash/rinse temperatures, three spin speeds and five selectable wash cycles. Dryer shall be all standard construction with white exterior, stainless steel drum, rotary type controls, lint filter and interior light.

2.07 SCHEDULE OF APPLIANCES

Room	Room Number	Appliance	Quantity
Teacher Dining	024	Full Height Refrigerator/Freezer	2
		Countertop Microwave	2
Mop (Kitchen)	012	Stacking Washer	1
		Stacking Dryer	1
Nurse	107	Undercounter Refrigerator	1
		Microwave	1
		Icemaker	1
Kitchenette (Admin)	108	Undercounter Refrigerator	1
		Microwave	1
Teacher Dining	230	Full Height Refrigerator/Freezer	2
		Countertop Microwave	2

PART 3 EXECUTION

3.01 INSTALLATION

A. Install all equipment in strict accordance with manufacturers' recommendations.

B. Remove all packing materials, boxes, and other protective coverings and leave all equipment in a clean, ready-to-use condition.

END OF SECTION

SECTION 114000

FOODSERVICE EQUIPMENT

PART 1 GENERAL

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION

1.02 SCOPE OF WORK

A. The bidder's attention is directed to the detailed Item Specifications which provide for minimum acceptable products. These paragraphs may indicate materials or components that exceed the manufacturer's standards and are required for this project.

B. Cooperate and coordinate with others engaged on the project in order that work will progress on schedule.

C. Work to be performed under this Section is shown on Foodservice Equipment Drawings.

D. Install materials furnished under this Section, other than materials that are expressly noted for installation under other Sections. Installation work shall be performed by workmen compatible with those existent on the project site. Equipment shall be of the latest design; new and unused, complete with all standard parts for normal operation finds and including such accessories or materials as may be required to comply with these Specifications.

E. This Specification is to further describe and supplement the applicable Drawings. What is called for by either the Drawings and/or these Specifications shall be furnished and installed as part of this work. Any questions relative to discrepancies or omissions shall be submitted to the Architect.

F. Provide neatly punched openings or cutouts required to permit passage of plumbing and electrical services by related trades and to accommodate mounted switches and receptacles in the equipment.

G. Work in this Section shall include but shall not be limited to the following:

1. Catalog items of equipment.
2. Fabricated equipment other than catalog items.
3. Plumbing trim consisting of mechanical system components required for standard operation of equipment items such as faucets and waste outlets. Vacuum breakers shall be furnished for equipment where water is introduced less than 2 in. above flood level.

4. Electrical equipment forming an integral part of equipment items such as electric motors, heating elements, controls, switches, starters, temperature regulators and internal wiring to a control panel or switch, if mounted on the equipment.

H. LEEDv4-S Requirements

1. The work of this section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEEDv4-S Certification at "Silver" Level is an Owner Requirement that is critical to secure project funding from the Massachusetts School Building Authority. LEEDv4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. Finished floor and walls, structural supports for all ceiling supported equipment, acoustical ceilings and related building work as set forth in the Contract Documents for General Contract.

B. Connecting piping, waste lines, traps and vent piping, complete with shut-off valves to all the equipment, and the rough-in for sanitary waste, domestic water, floor drains and plumbing fixtures except those provided under this Section, and related mechanical work: SECTION 220001 - PLUMBING

C. Exhaust ventilating systems complete with blowers, ductwork, hangers, access panels, and insulation between the exhaust collars and the exhaust blowers: SECTION 230001 - HEATING VENTILATING AND AIR CONDITIONING.

D. External wiring; the mounting and wiring of motor starters, solenoid valves, switches and receptacles not integral with the equipment; mounting and wiring of walk-in refrigerated room ceiling mount light fixtures; wiring of walk-in refrigerated room interior evaporator coils; connecting conduit, and external connections to equipment to the building electrical distribution system: SECTION 260001 - ELECTRICAL.

E. Flooring in walk-in cooler and freezer: SECTION 090002 - TILE.

F. Appliances in Faculty Workroom/Dining, Nurse's Exam/Resting, Admin kitchenette and stacked washer/dryer in kitchen: SECTION 113100 - APPLIANCES.

1.04 SUBMITTALS

A. Submit the following in accordance with the provisions of SECTION 013300 - SUBMITTALS.

B. Stub-in drawings shall indicate the layout of equipment and dimensioned locations of all services to the equipment.

1. Hand drawn scale: 1/2 in. = 1 ft., 0 in.

2. CAD drawn scale: 3/8 in. = 1 ft., 0 in.

3. Stubbed services shall include electrical, hot and cold water, floor drains or floor sinks, solid wastes and exhaust collar connections. Point of connection services shall include steam supply, condensate return, gas connection and indirect waste connections. Service dimensions shall include height measured from finish floor.

4. Electrical and plumbing services shall be indicated and coordinated on the same drawing.

5. Call-outs for each stub point indicated at the point, or clearly keyed to a schedule on the same drawing.

6. Special conditions plan shall include all floor recesses, curbs and special wall construction indicated and dimensioned

C. Fabrication drawings shall be furnished for non-catalog items, showing plans, elevations and full construction details with gauges, components, fasteners, erection and connections. Drawings shall be to the minimum scale of 3/4 in. = 1 ft., 0 in.

D. Standard items of equipment, not built-in or part of other assemblies shall be submitted for approval in the form of bound catalog cuts. Each cut shall include a clearly marked item number, a listing of all optional accessories and finishes, and connection data.

E. Catalog Cuts shall include letters of approval indicating compliance with M.G.L. c. 142 and 248 CMR. Only products and materials that have been listed by the Board as Product-approved shall be used for plumbing and gas fitting work performed in the Commonwealth of Massachusetts.

F. Mechanical refrigeration system submittal shall include the firm name and address of the installation contractor and name of the qualified installer.

G. Energy Star - Specified Energy Star rated equipment and appliances shall serve as the standard for all types of equipment and appliances whenever possible. Kitchen Equipment Contractor shall clearly indicate that items are Energy Star rated both on the submittal cover sheet and manufacturer cut sheets.

H. Failure to comply with approved shop drawings shall be cause for rejection of an improperly built assembly.

I. LEED for Schools Submittals (Refer to SECTION 013300-SUBMITTALS):

1. Relevant supporting documentation, as required by LEED for Schools v4 and as detailed in Section 018113-Sustainable Design Requirements.

2. A completed LEED MATERIALS REPORTING FORM, per Section 018113-Sustainable Design Requirements.

3. Product substitution requests are subject to additional LEEDv4-S submittal requirements, see SECTION 012500-SUBSTITUTION PROCEDURES.

1.05 SAMPLES

A. If the bidder's proposed equipment fabricator is unknown to the Consultant's office, immediately after award of contract, submit the following samples for selection and approval:

1. Section of table showing edge, bullnose, framing, fasteners, gusset, leg, and foot, all assembled.

2. Drawer assembly (will be returned for use on this project).

B. Work delivered to the job shall match approved samples.

1.06 GUARANTEES AND WARRANTEES

A. New equipment furnished for this facility shall be guaranteed for a period of not less than one calendar year beginning on the date of final acceptance of the work of this Section. In the case of a manufacturer whose standard warranty exceeds this period the longer period shall apply. Self-contained refrigeration units for reach-in refrigerators, freezers, ice cream chests and ice machines shall carry a five-year replacement warranty for the sealed unit. The guarantee shall protect against defective material, design and workmanship.

B. In addition to the guarantee called for under the General Conditions, this Contractor shall further agree that in the event of failure of any system or item of equipment or improper functioning of specified work during the guarantee period, he shall have "on call" competent service personnel available to make the necessary repairs or replacements of specified work promptly at no cost to the Owner. In the event that replacement of an entire item is required, the Owner will have the option of full use of the defective equipment until a replacement has been delivered and completely installed.

C. Furnish manufacturer's warrantees for each item of standard equipment and a warranty on fabricated equipment. Submit guarantees and warrantees to the Architect in accordance with conditions found in "Demonstration and Operating Instructions" paragraphs, contained in Part 3, this Section.

1.07 REGULATORY AGENCIES

A. Work shall be in accordance with the governing health, building and safety, and fire protection codes and regulations.

B. Standards of the National Sanitation Foundation (NSF) shall serve as guidelines for the work of this Section.

C. Electric equipment and accessories shall conform to the standards of the National Electric Manufacturers Association (NEMA), Underwriters Laboratories, Inc. (UL) or Electrical Testing Station (ETS).

D. Steam generating equipment and accessories shall conform to the standards of the American Society of Mechanical Engineers (ASME).

E. Energy Star - Specified Energy Star rated equipment and appliances shall serve as the standard for all types of equipment and appliances whenever possible.

F. BOARD OF STATE EXAMINERS OF PLUMBERS AND GAS FITTERS

Board Required Product-approval. Only products and materials that have been listed by the Board as Product-approved shall be used for plumbing and gas-fitting work performed in the Commonwealth and governed by M.G.L. c. 142 and 248 CMR.

1.08 EQUALITY OF MATERIALS AND EQUIPMENT

A. The words "or equal" are understood to follow the name of any maker, vendor, or proprietary product, any trade name, plate or catalog number, and any detailed description used in the plans or specifications to define the material, article, assembly or system required. An item shall be considered equal to an item named or described in the plans or specifications if in the opinion of the Architect, it is at least equal in quality, durability, appearance, strength and design, it will perform at least equally the function imposed by the general design for the work, it conforms substantially, even with deviations, to the detailed requirements for the item in the plans and specifications, and it does not result in increased cost to the Owner. The words "or equal" shall not be construed to permit substantial departure from the detailed requirements of the plans and specifications for any material, article, assembly or system, or of any component parts hereof.

PART 2 - PRODUCTS

2.01 MATERIALS AND FINISHES

A. General

1. Metals shall be free from defects impairing strength, durability or appearance, made of new materials with structural properties to withstand strains and stresses to which normally subject.
2. Stock materials, patterns, products and methods of fabrication shall be approved provided that they conform to the requirements specified under Item Specifications.

B. Stainless Steel

1. Stainless steel shall be non-magnetic corrosion resistant chromium-nickel steel, Type 302 or 304 (18-8 Alloy), polished to a Number 4 finish where exposed, unless otherwise noted. Minimum gauges shall be as specified under Item Specifications.

C. Galvanized (Galvannealed) Steel

1. Galvannealed steel shall be commercial quality with tight coat of zinc galvanizing metal applied to a soft steel sheet, subsequently passed through a 1200 degree F. oven, resulting in a spangle free paintable surface. Minimum gauges shall be as specified under Item Specifications.

D. Plastic Laminate Materials

1. The laminate facing shall be GP-50, .050 in. thick, general purpose, high pressure, decorative plastic laminate that meets or exceeds the requirements of NEMA Publication LD3-1985, and NSF Standard 35. The plastic laminate exposed surfaces shall be provided in accordance with the specified manufacturer, finish and color. Balancing sheet shall be backing grade GP-28 in matching color at semi-exposed and BK-20 unfinished where hidden.
2. Plastic laminate covered surfaces shall be factory fabricated with 3/4 in. thick core having plastic laminate facing on both faces and all edges, laminated with waterproof glue under pressure in accordance with the plastic laminate manufacturer's specifications.
3. The core shall be medium density phenolic resin particleboard conforming to ANSI A208.1, Type 2-M-2, 45 pound per cubic foot density minimum.
4. Provide veneer core plywood or solid hardwood edge banding for doors and vertical dividers or panels where hardware is attached to casework.
5. Hinges shall be articulated, spring loaded type equal to Grass 1200 or Stanley, with quantity adequate to support the door without deformation. Do not provide handles on plastic laminate clad doors.

2.02 CONSTRUCTION

A. General

1. Flat metal work items of equipment, such as tables, sinks, or counter tops, and other non-catalog items described under Item Specifications, shall be manufactured by a food service equipment fabricator who has the plant, personnel and engineering facilities to properly design, detail and manufacture high quality food service equipment.

2. The equipment fabricator shall be subject to the approval of the Architect, Owner and Consultant. Refer to Paragraph 1.05, Samples.

3. Fabricated foodservice equipment shall be manufactured by one manufacturer, of uniform design, material and finish.

4. Equipment shall conform to the applicable requirements of current Federal, State, and Local Codes and Regulations.

B. Welding

1. The words "weld", "welded" or "welding" as used in this Section of the Specification shall mean that metal joints shall be continuously welded and the exposed parts ground smooth and polished to match adjoining surfaces. Welding electrodes shall match the material being welded.

2. Where spot welding is specified, the welds shall be a maximum spacing of 3 in. on center.

3. Where tack welding is specified, the pieces welded shall have 1/2 in. minimum lengths of welding material at 4 in. on center maximum spacing.

C. Grinding, Polishing and Finishing

1. Exposed welding joints shall be ground flush with the adjoining material and neatly finished to harmonize therewith. Wherever material has been depressed or sunken by a welding operation, such depressions shall be suitably hammered and peened flush with the adjoining surfaces and, if necessary, again welded and ground to eliminate low spots. Ground surfaces shall be polished or buffed to a degree consistent with good workmanship. Coves shall be ground and polished to match adjoining material.

2. Care shall be exercised in grinding operations to avoid excessive heating of metal and discoloration. Abrasives, wheels, and belts used in grinding stainless steel shall be iron free and shall have not been used on carbon steel. The texture of the final polishing operation shall be uniform and smooth. Grain direction shall be uniform, uni-directional for a total length of material. Cross grains and random polishing are not acceptable.

3. The general finish of equipment shall be consistent throughout the job. Brake ends shall be free of open texture or orange peel appearance, and where brake work mars the uniform finish of the material, the marks shall be removed by grinding and polishing, and finishing. Sheared edges shall be free of burrs, projections or fins to eliminate all danger of laceration. Mitered or bullnosed corners shall be neatly finished with the underedge of the material neatly ground to a uniform condition and in no case will overlapping material be acceptable. The equipment surfaces, where exposed, shall be finished to a grained Number 4 (satin) finish unless otherwise specified. An exposed surface shall include an inside surface, which is exposed to view when a swinging or sliding door is opened. Underside of shelves need not be satin finish unless otherwise specified.

4. Excessive distortion caused by welding shall be cause for rejection for that item of equipment.

2.03 BUY-OUT COMPONENTS

A. CASTERS: 5 in. diameter polyurethane tired, swivel, plate or stem mount to suit application, 300 pound capacity, brakes only if specified, NSF approved; Component Hardware C-21-3050 (plate/no brake), C21-3051 (plate/brake) C23-3350 (stem/no brake) or C23-3351 (stem/brake), or equal by Kason, or PDI Atlanta.

B. COUNTER LEGS: Stainless steel, 6 in. to 7-3/4 in. height adjustment; Component Hardware A72-0811, or A77-5048, or equal by Kason, or PDI Atlanta.

C. DOOR AND DRAWER PULLS: Stainless steel, full grip type with beveled edge, NSF approved for stud mounting in device, in horizontal attitude to meet NSF requirements; Component Hardware P63-1012, or equal by Kason, or PDI Atlanta.

D. DOOR HINGES: Stainless steel, lift off type, swedged knuckle for minimum clearance, nylon bearings; Component Hardware M75-1002 or equal by Kason, or PDI Atlanta.

E. DRAWER PANS: Molded plastic or fiberglass, 20 in. by 20 in. by 5 in. deep, NSF approved; Component Hardware S80-2020, or equal by Kason, or PDI Atlanta.

F. DRAWER SLIDES: Stainless steel, NSF approved, full extension, 200 pound capacity with stainless steel ball bearing wheels; Component Hardware S-52 series, or equal by Kason, or PDI Atlanta.

G. FAUCET SETS, DECK MOUNTED: Chrome plated cast bronze with 1/2 in. IPS eccentric flanged female inlets on 8 in. centers, removable cartridges, lever handles, and aerator tip on swivel nozzle or swivel gooseneck to suit the application; T&S Brass B-0221 or B-0321, or equal by Component Hardware, Chicago, or Fisher.

H. FAUCET SETS, POTWASHING SINK: Chrome plated cast bronze with removable cartridges, 3/4 in. passages, eccentric flanged female inlets on 8 in. centers with LL street EL inlets with locknuts, four prong handles, 12 in. swing spout; T&S Brass B-0290 or equal by Component Hardware, Chicago, or Fisher.

I. FAUCET SETS, SPLASH MOUNTED: Chrome plated cast bronze with 1/2 in. IPS eccentric flanged female inlets on 8 in. centers, removable cartridges, lever handles, and aerator tip on 12 in. swing spout; T&S Brass, B-0231 or equal by Component Hardware, Chicago, or Fisher. Provide each with a mounting kit.

J. GUSSETS: Stainless steel, stepped side, fully closed, NSF approved, mild steel interior reinforcement, wide flange for welding to framing, set screw anchor for leg; Component Hardware A20-0206C, or equal by Kason, or PDI Atlanta.

K. LEG AND BULLET FOOT ASSEMBLIES: Stainless steel tubing, 16 gauge, number 4 finish, adjustable bullet foot with minimum of 3 in. vertical travel, 2,000 pound capacity, top designed for mounting in gusset, length to suit application; Component Hardware A46-6272-C, or equal by Kason, or PDI Atlanta.

L. LEG AND FLANGED FOOT ASSEMBLIES: Stainless steel tubing, 16 gauge, number 4 finish, adjustable bullet foot with 3-1/2 in. diameter flange and two holes for securing to floor, minimum of 3 in. vertical travel, 2,000 pound capacity, top designed for mounting in gusset, length to suit application; Component Hardware A46-4272-C, or equal by Kason, or PDI Atlanta.

M. NUTS: Zinc plated "Pal Nuts" with integral cap and lockwasher; Component Hardware Q-34-1024 or equal by Kason, or PDI Atlanta.

N. SEALANT: Sealant for sealing equipment to walls or filling crevices between components. All materials listed below that are used in the building interior must not exceed the following requirements:

1. South Coast Air Quality Management District (SCAQMD) Rule #1168
2. For interior adhesives and sealants applied within the weatherproof barrier, submit a printed statement of VOC content.

O. SOUND DEADENING BASINS: Component Hardware Q75-1366 or equal by Kason, or PDI Atlanta.

P. SOUND DEADENING TOPS AND SHELVES: Component Hardware Q85-5225, or equal by Kason, or PDI Atlanta, "Tacky Tape" installed between all channel or angle reinforced tops, drainboards or undershelves.

Q. WASTE OUTLETS, CRUMB CUP: Stainless steel body, removable crumb cup stopper, gasket, coupling nut and sealing washer, 1-1/2 in. IPS, and optional 4 in. long nickel plated brass tailpiece with gasket; Component Hardware E38-1010, or equal by Kason, or PDI Atlanta.

R. WASTE OUTLETS, LEVER OPERATED: Cast stainless steel rotary type with 1-1/2 in. NPS and 2 in. NPS threads, and removable beehive crumb-cup; Component Hardware DSS-8000 or equal by Component Hardware, Chicago, or Fisher.

S. WELD STUDS: Copper flashed steel with 10-24 threads, length to suit; Component Hardware Q-36, or equal by Kason, or PDI Atlanta.

T. GFCI RECEPTACLES: Pass & Seymour 2095-W, 115 volt, 20 amp GFCI Duplex Receptacle or equal.

2.04 FABRICATED COMPONENTS

A. Box Type Cabinet Construction

1. Sheet metal cabinet bases of box type construction shall be fabricated without general interior framing. Structural strength shall be achieved by the gauge of the metal and the formed angle and channel edges and corners. Vertical sections shall be closed. Cabinet base shall be fabricated of 18 gauge minimum of material specified at Item Specifications. Mount on counter legs or base as specified.

2. Intermediate shelf shall be fabricated of 16 gauge stainless steel with rear and sides turned up 1-1/2 in. tight to the cabinet sides. The front edge of shelf shall be turned down 1-1/2 in. and in 1/2 in. at 45 degrees and shelf spot welded in place. Reinforce underside with longitudinal 14 gauge channel on the centerline.

3. Bottom shelf shall be fabricated of 16 gauge stainless steel similar to the intermediate shelf except that the front edge shall be formed into a full width 1-1/2 in. by 4 in. welded in boxed channel. Rear edge shall be fitted with a full width channel. Underside shall be reinforced.

B. Counters and Drainboards

1. Counters, table tops and drainboards shall be 14 gauge stainless steel, of NSF construction, with edges per Item Specifications. Metal tops shall be made of the largest pieces available and shall appear as one piece with all field and shop joints reinforced and welded, ground and polished. Short pieces of metal will not be acceptable. Counter bends shall be not less than 1/8 in. radius. Wherever a fixture has a waste or drain outlet, the surface shall pitch toward the outlet.

2. Counters, table tops and drainboards shall be reinforced with channel or angle frame as specified in the Item Specifications. Framing shall be secured to the underside with sound deadening material sandwiched between the surfaces, weld studs, and nuts.

3. Wherever bolts or screws are welded to the underside of trim or tops, neatly finish the reverse side of the weld uniform with the adjoining surface of the trim or top. Depressions at these points will not be acceptable. Raise dimples and depressions by peening, or heating and shrinking, and grind and polish to present a flat surface.

C. Crossrails

1. Crossrails shall be not less than 1-1/4 in. outside diameter 16 gauge stainless steel tubing welded, ground and polished to a Number 4 finish. Crossrails shall be welded to legs at a height of 10 in. above finished floor, and shall extend from left to right between front legs, unless otherwise specified, and from front to back between all legs.

D. Drawer Assembly

1. Drawer assemblies shall consist of a removable drawer pan set in a removable 16 gauge stainless steel channel shaped drawer support frame with gusset plate reinforced corners.
2. Support frame shall have double pan front cover consisting of boxed 18 gauge stainless steel outer shell with welded corners, flush mounted recessed stainless steel pull, 20 gauge stainless steel back shell tack welded to outer shell with fiberglass sound deadening between. Drawer shall be provided with rubber bumpers to quiet closing. Support drawer frame on full extension drawer slides.
3. Drawer shall be suspended from table in a three-sided, 16 gauge stainless steel enclosure with flanged-in bottom edges, banded lower front, flanged-out front side and top edges. All sharp corners shall be broken and any exposed exterior threads of slide mounting bolts shall be provided with solid metal acorn nuts.
4. Component Hardware S91-0020 with thermoplastic pan is considered as equivalent to the above specified construction.

E. Edges

1. Marine: Bumped up 1/2 in. at 45 degrees and turned down 1-1/2 in. and in 1/2 in. at 45 degrees; corners welded and square.
2. Raised roll: Coved up and rolled 180 degrees on a 1-1/2 in. diameter with 3 in. height; corners welded and rounded or coved.
3. Rolled: Rolled 180 degrees on a 1-1/2 in. diameter; corners welded and bullnosed.
4. Short (6 in.) splash on counters: Coved up 6 in., turned back to wall or equipment 1 in. and down 1/2 in.; ends welded closed. Secure tight to face of wall with clips unless specified otherwise and seal joint.
5. Tall (10 in.) splash on preparation sinks, dishtables,: Coved up 8-1/2 in., turned back to wall or equipment 1-1/2 in. at 45 degrees and down 1/2 in.; ends welded closed. Secure 3 in. off face of wall with brackets unless specified otherwise.
6. Turn down: Turn down 2 in. and in 1/2 in. at 45 degrees; corners welded and square.

F. Framing of Tops, Drainboards, Undershelves

1. Channel: Reinforce with 1 in. by 4 in. by 1 in. 14 gauge galvannnealed steel channels; stainless steel if exposed to view. Channels shall run front-to-back at all legs and longitudinally on the centerline. Cross and longitudinal members shall be welded into a single assembly at intersections and sharp corners shall be broken. Framing shall be secured to underside of tops with pairs of weld studs. Framing shall be installed maintaining NSF required clearance to adjacent vertical surfaces and edges of top. The following specified angle framing is considered superior to channel framing and may be used in its place.

2. Angle: 1-1/2 in. by 1-1/2 in. by 1/8 in. perimeter angle frame with crossmembers not over 30 in. on center. Framing shall be secured to top with weld studs, 18 in. on center maximum with three minimum studs on any single face of a table. Perimeter angle frame that is exposed to normal view, shall be stainless steel. Crossmembers and framing not unexposed to normal view shall be iron. Corners of angle frame shall be mitered, or notched and brake formed to form a closed corner. Corner gusset plates used for mounting of leg gussets shall be 1/8 in. thick and sealed to underside of the top. Iron framework joints shall be ground smooth, and shall be painted with a minimum of two coats of aluminum lacquer after degreasing. Framing shall be installed maintaining NSF required clearance to adjacent vertical surfaces and edges of top. Channel framing shall not be considered equal to specified angle framing.

3. Sound deaden all horizontal framed surfaces with material sandwiched between the framing and the bottom of the surface.

G. Hinged Doors

1. Hinged doors shall be double pan type stainless steel construction with 18 gauge exterior and 20 gauge interior, welded corners, and 1/2 in. fiberglass insulation for sound deadening. Each door shall be provided with a stainless steel recessed handle, and an adjustable tension door catch equal to Component Hardware M22-2430. Doors shall close against the bottom shelf and flush with body of equipment.

2. Louvered hinged doors for ventilation shall be fabricated of the same components and provided with a full perimeter 3 in. wide channel reinforcing frame on the interior face. Remaining face shall be die punched with drip-proof louvers fully utilizing the remaining flat metal or a stainless steel flattened expanded metal grille per Item Specifications.

H. Sinks and Sink Inserts

1. Unless otherwise specified, sinks including sink inserts built into tops of fixtures, shall be made of 14 gauge stainless steel with all vertical and horizontal corners rounded to a radius of approximately 3/4 in. with the intersections meeting in a spherical section. Sinks shall be integrally welded to fixture tops.

2. Sinks with two or more compartments shall have full height, 1 in. thick double wall partitions consisting of two pieces of stainless steel back-to-back so fabricated that each compartment will be a deep bowl with coved corners. Partitions shall be welded in place to the bottom, front and back of the sink with smooth rounded coved corners. Top edges of the partitions shall be continuously welded. The front of the sinks shall consist of a stainless steel smooth, flush apron, same gauge as the sinks. Bottom and rear of partitions shall be closed. Sink dimensions contained in Item Specifications are inside dimensions.

3. Sinks shall be provided with integral 14 gauge stainless steel drainboards when specified. Drainboards and sink basins shall be pitched toward waste outlets and shall be self draining. The underside of all sink basins shall sound deadened. Sink units shall be provided with an integral splash at walls. Provide the necessary holes for the mounting of faucet sets.

I. Sliding Doors

1. Sliding doors shall be double pan type stainless steel construction with 18 gauge exterior and 20 gauge interior, welded corners, and 1/2 in. fiberglass insulation for sound deadening. Each door shall be provided with a stainless steel recessed handle. Provide sliding doors with nylon roller bearing sheaves and overhead track components equal to Component Hardware B58-5523 and 5513 sheaves, B57 track, B62-1093 nylon door guides and B60-1086 door stops.

J. Undershelves

1. Undershelf in an open type table shall be 16 gauge stainless steel unless otherwise noted. Edges shall be turned down 1-1/2 in. and in 1/2 in. at 45 degrees with corners notched out to fit legs to which shelf shall be welded from underside. Line up all edges of shelf with centerline of legs. Reinforce underside with longitudinal 14 gauge channel on the centerline.

K. Wall Brackets

1. Dish tables, sinks and counters with sinks shall be securely anchored 3 in. off the face of the wall unless specified otherwise. Brackets shall be "Z" shaped and fabricated of 3 in. wide, 14 gauge stainless steel. Brackets shall be secured in a vertical attitude to the rear of equipment backsplash with weld studs, and to the wall with appropriate fasteners.

2. Counters that are specified tight-to-wall shall be secured in a hidden manner with steel clips, and the wall/fixture joint shall be sealed.

L. Wall Shelves

1. Wall shelves shall be fabricated of 16 gauge stainless steel, size per Item Specifications, with back and ends raised 1-1/2 in., front edges of ends angled back, all corners broken, and front turned down 1-1/2 in., and in 1/2 in. at 45 degrees. Shelf corners shall be welded, ground and polished. Mount shelf 1 in. off face of wall with suitable fasteners on 14 gauge stainless steel flag brackets, 48 in. on center maximum. Flag brackets shall have a web angle of 30 degrees, measured from horizontal.

2.05 ELECTRICAL EQUIPMENT AND WIRING

A. Under this Section, items of equipment having mounted electrical motors, electrical heating units, lighting fixtures, controllers, control stations, switches, receptacles and the like shall be internally wired as specified herein, terminating at a junction box mounted on the equipment and left ready for connection to the building electrical distribution system by the Electrical Contractor. Extra ceiling mount light fixtures for refrigerated rooms shall be delivered to Electrical Contractor for field installation and wiring. Connections to evaporator coils mounted inside refrigerated rooms shall be wired by the Electrical Contractor.

B. Provide openings or cutouts required to accommodate the switches and receptacles in the specified work, and the wiring in conduit from terminal blocks in junction boxes.

C. Electrically operated equipment and fabricator wiring shall conform to the requirements of Underwriter's Laboratories, Inc. Motors over one horsepower shall be equipped with overload protection.

D. Furnish wiring diagrams for equipment as requested by the Architect or Contractor.

2.06 ITEM SPECIFICATIONS

Item 1
MOP SINK AND FAUCET
No work in the Section. Item to be provided and installed by Section 22 00 01.

Item 2
MOP RACK/SHELF
Make - Advance Tabco K-245 or equal by Eagle or Aero
Size - 24 in. by 8 in. by 7-1/2 in. high
Description - Unit shall be all standard construction of welded 18 gauge stainless steel type 430 polished satin finish, back and sides turned up 1-1/2 in., mounted on two die formed wall brackets and furnished with two mop hangers and three rag hooks.

Item 3
MOP BUCKET
No work in this Section. Item to be provided by Owner.

Item 4
STACKED CLOTHES WASHER DRYER
No work in the Section. Item to be provided and installed by Section 11 31 00.

Item 5
STAFF LOCKERS
Quantity - Five
No work in the Section. Item to be provided and installed by Section 10 51 13.

Item 6
DETERGENT STORAGE CABINET
Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, Carbone Metal Fabricators, or SML Stainless Steel Group
Size - 36 in. by 18 in. by 72 in. high
Construction - 16 gauge stainless steel top with edges turned down, 18 gauge stainless steel cabinet body, fixed bottom shelf, three adjustable intermediate shelves, and 63 in. high double pan hinged doors at front. Mount on 6 in. high stainless steel adjustable legs.
Accessories - Provide unit with two (2) three point "T" handles, one locking and barrel bolts mounted to inside top and bottom of door. Provide slotted "L" bracket a top rear for securing to wall.

Item 7
Spare number

Item 8
STORAGE SHELVING
Quantity - Nine
Make - Metro Super Adjustable Super Erecta or equal by ISS or Cambro
Size - (1) 54 in. by 21 in., (4) 48 in. by 21 in., (1) 42 in. by 21 in., and (4) 36 in. by 21 in., all 74-5/8 in. high; five tier with bottom shelf up 14 in. clear above floor
Description - Unit shall be all standard construction with Super Adjustable Chrome plated wire shelves and tubular steel uprights with capped tops, adjustable feet, and 1 in. shelf height adjustment capability with Corner Release System. Each unit shall include four legs.

Item 9
DUNNAGE PLATFORM
Quantity - Three
Make - New Age 2000 Series or equal by Channel or Kelmax
Size - (1) 60 in. by 20 in., (1) 42 in. by 20 in., and (1) 36 in. by 20 in., all 12 in. high
Description - Dunnage platforms shall be all standard construction with 1-1/2 in. by 1-3/4 in. by .070 in. thick wall extruded Type 6063-T5 aluminum tubing with four horizontal tubes and four legs welded together, and each unit capable of supporting 3,000 pounds.

Item 10
WALK-IN COOLER
Make - American Panel, Bally, or Imperial Brown
Size - 7 ft., 2-1/2 in. by 11 ft., 11 in. by 7 ft., 10 in. high minimum inside dimensions; 7 ft., 8 in. high after finished floor is installed by the General Contractor
Power - 20 amps circuit - 120/60/1 to light fixtures, temperature monitor/alarm, and door defrost heater strip
Installation, Construction, Materials and Accessories - See Item 11
Guarantee - See Item 11

Item 11
WALK-IN FREEZER
Make - American Panel, Bally, or Imperial Brown
Size - 8 ft., 2 in. by 11 ft., 11 in. by 7 ft., 10 in. high minimum inside dimensions; 7 ft., 8 in. high after finished floor is installed by the General Contractor.
Power - 20 amps circuit - 120/60/1 to light fixtures, temperature monitor/alarm, door defrost heater strip, and pressure relief port
Installation - The walk-in refrigerated room shall be installed in a 7 in. deep ID recess (below finished floor). Recess depth allows 1 in. for use of leveling sand; 4 in. for the insulated floor panels; 2 in. for finished floor and setting bed that shall be carried in from the adjacent room and level to same. The finished floor and setting bed shall be furnished and installed by the General Contractor, and shall have coved joints at all walls, turned up a minimum of 4 in. inside and out. The unit shall be set level on a bed of clean, dry mason's sand. Shims are not acceptable for leveling material.
Construction - All standard construction per the manufacturer, modified to meet the specific following points:

- Walls to be 4 in. thick with CFC free urethane foam insulation, UL Class 1 rated
- Cam type locking devices
- 34 in. by 76 in. minimum door clearance
- Polished hardware (hinges and latch to match)
- Three hinges on doors (to include one Kason 1248 spring assist hinge per door)
- Leveraged pull handle (mechanical advantage type, Kason 1236 or equal)
- Quarter turn inside safety release lever handle mechanism (not screw type)
- Prewired door sections with heater wires and light fixtures and switches
- Kason 1806 LED light fixtures or Kason 1808 LED light fixtures
- Dial type thermometers at doors
- Model IC+ (with dry contacts) or Modularm 75LC temperature and HACCP monitoring system at doors. Cooler and freezer alarms to interconnect with access control system for alert monitoring. Kitchen Equipment Contractor to provide each system with a pair of 22 gauge low voltage wires. Wires shall be installed by the Controls Contractor. Wires shall run from the dry contacts to the access control panel. Kitchen Equipment Contractor to verify length prior to purchasing. To avoid false triggering, provide a shielded two-conductor cable with the shield connected to the receiving equipment.
- NSF construction throughout with exception of buried floor panels

- Interior and exterior faces of doors and exposed exterior walls shall be provided with aluminum diamond tread plate protective material to a height of 48 in. above finished floor. Hold diamond plating up 6 in. from the finish floor to accommodate the coved base.

Minimum materials - Interior and exterior wall surfaces shall be clad with .038 in. pebble finished aluminum. The ceiling shall be finished in white polyester over 24 gauge galvanized steel. Interior floor shall be 14 gauge galvanized steel.

Accessories - Freezer shall be provided with an electrically heated pressure relief port. Each door shall be provided with a heated vision panel, 14 in. by 14 in., constructed of three panels of tempered unbreakable glass, electrically heated, with sealed air spaces between. Provide matching trim strips and closure panels to adjoining surfaces, fabricated per details, made of largest pieces available to minimize number of joints, and installed in accordance with NSF Brochure 770202, Installation Manual for Walk-in Refrigerators and Freezers. Provide eight total extra Kason 1806 LED OR Kason 1808 LED light fixtures for mounting in the rooms and deliver to Electrical Contractor for field installation.

Guarantee - The walk-in refrigerated room panels shall be guaranteed for a period of ten (10) years from the date of approved installation for defects in materials and workmanship when subjected to normal use and service; remainder of rooms for one year.

Item 12
REMOTE REFRIGERATION SYSTEM
Quantity - Two
Make - Bally, Keeprite, Trenton, Heatcraft, Bohn, Larkin, Chandler, or Climate Control

Scope - Furnish and install complete refrigeration systems for the walk-in refrigerated rooms in accordance with the plans. The systems shall include condensing units, evaporator coils, piping, all specified accessories, and those components required to provide complete and satisfactory systems in accordance with accepted refrigeration practice.

Important: The installation work shall be performed by a fully qualified refrigeration contractor employing a certified mechanic fully trained in the installation of commercial refrigeration systems. Submittal shall list the installing company and the qualified system installer.

Piping - Furnish and install the interconnecting piping between the condensing units and their respective unit coolers. Piping shall be installed in a neat and workmanlike manner with adjustable hangers spaced at no more than ten foot intervals on horizontal runs; six foot intervals, vertical runs.

Line sizes shall be in accordance with ASHRAE standards and best refrigeration practice to assure proper feed to evaporator, avoid excessive pressure drop, and prevent excessive amounts of lubricating oil from being trapped in any part of the system. Line sizing shall be such that it will protect the compressor from loss of lubrication at all times, prevent liquid refrigerant from entering the compressor during operating or idle time, and maintain a clean and dry system.

Refrigeration piping shall be Type L, ACR grade, hard drawn seamless copper tubing, wrought type copper fittings, and silver soldered joints. Precharged lines are not acceptable.

Furnish and install sleeves for refrigerant and evaporator drain piping wherever piping passes through a wall or ceiling. Sleeves shall be non-conductive gray plastic tubing, with interior dimension sized at least 1/4 in. larger than piping, and shall be neatly packed with brine putty after installation.

Furnish and install condensate drain piping from the unit cooler to an open drain. Piping shall consist of not less than 7/8 in. Type L copper tubing, supported 36 in. on center maximum, in such a way that there will be 1 in. clearance between the wall and the tubing. Provide a union or slip fitting at the connection to the evaporator drain pan to allow easy disassembly for service and cleaning. Drain piping shall be pitched 4 in. to the foot and carried through the wall of the refrigerated area. It shall be trapped to prevent entry of warm air and insects to the refrigerated rooms and discharged to a floor drain with the code required air gap. The exposed drain piping shall be spray painted.

Provide an electric drainline heater tape in the freezer, with a length equal to five wraps per foot of length of the drainline located within the freezer compartment. Wrap and secure in accordance with manufacturer's recommendations.

Provide chrome plated escutcheon plates at all exposed points where piping penetrates the wall or ceilings.

Insulation - Suction lines for refrigerated rooms having a temperature above freezing shall be covered with 3/4 in. wall thickness closed cell HT Armaflex insulation with ultra violet radiation protection.

Suction lines for refrigerated rooms having a temperature below freezing shall be covered with 1 in. wall thickness closed cell HT Armaflex insulation with ultra violet radiation protection.

The insulation shall be applied to these lines in accordance with manufacturer's recommendations, and as they are being installed so that insulation will not be split. All joints shall be completely sealed with overlapping, cemented material to prevent the formation of frost on the lines.

Controls - Each evaporator shall be provided with mounted electronic controller with digital display. The time clock and heater contactor shall be removed from the condensing unit. No control wiring will be required from evaporator to the condensing unit.

Refrigerant Testing - The entire system shall be pressure and leak tested at no less than 100 PSIG, cleaned and dehydrated by maintaining a vacuum of 500 microns or lower for a period of five hours. The required operating charge of refrigerant and oil, if necessary, shall be added and the entire system tested for performance. Each system shall be clearly marked as to the type refrigerant required.

Guarantee - The equipment shall be guaranteed to maintain the specified temperatures. All mechanical refrigeration equipment shall be mechanically guaranteed for a period of one year after date of acceptance by the Owner. The emergency service shall be provided free of charge, whenever necessary on a 24 hour, seven day-per-week basis during the guarantee period.

Any leaks that occur during the first year of operation after acceptance by the Owner, shall be repaired and the necessary refrigerant added at no expense to the Owner.

The year's service shall be provided by the installing company, and under no circumstances will the service policy be sublet to another refrigeration contractor. The name of the installer/service agency for the guarantee period shall be located at a prominent place on the condensing units.

The condensing units shall be provided with an additional four year parts warranty to commence upon the completion of the aforementioned guarantee, bringing the total parts warranty to five years.

Condensing Units - The condensing units shall consist of an EC energy saving motor with variable speed controller, compressor, refrigerant condenser, liquid receiver, compressor service valves, and a dual high-low pressure control.

The condensing units shall be outdoor type. The compressor shall be serviceable semi-hermetic or scroll type per schedule, and fitted with anti-corrosion coated aluminum fin or micro-channel condenser, suction service valve, discharge service valve, compressor contactor, high and low pressure controls, receiver with fusible plug, liquid shut-off valve and charging port, mounted non-fused disconnect switch, waterproof electrical control box, discharge line vibration eliminator, weather resistant enameled galvanized steel cabinet, access guard, liquid line assembly, suction line filter and vibration eliminator, crankcase heater, and 1-1/2 in. high raised steel base.

Mount on building wall per plan with manufacturer provided brackets and suitable anchors with bottom 80" minimum above floor.

Evaporator Coils - Each evaporator shall be provided with mounted electronic controller with digital display, thermostatic expansion valve, and solenoid valve. The time clock and heater contactor shall be removed from the condensing unit. No control wiring will be required from evaporator to the condensing unit.

The freezer shall be provided with an automatic electric defrost system consisting of one evaporator coil as indicated in the schedule. Evaporator shall be low profile type six fins per inch complete with EC energy saving fan motors. Coil shall be NSF and UL Listed.

The cooler shall be provided with one evaporator coil as indicated in the schedule. Evaporator shall be low profile type six fins per inch complete with EC energy saving fan motors. Coil shall be NSF and UL Listed.

Furnish and install 1/4 in. minimum diameter stainless steel threaded mounting rods for the hanging of the evaporator coils, with stainless steel washers and nuts on the interior ends, and reinforcing angle at the exterior top of the room. Plated steel running thread is not acceptable.

Refrigeration Equipment Schedule

Cooler Room Temp: +35 degrees F		TD: 10 degrees F			
Condensing unit (12a)	Amps	Ref	BTU/hour	Evap Temp	Cond Temp
BQZA007H8-HT3A	6.5 - 208/3	448A	7,875	+25 degrees F	+95 degrees F
Evaporator coil (12b)	BTU/hour	CFM	Fan amps	Defrost amps	Defrost type
BLP209MA-S1B-T	7,879	2,020	2 - 120/1	NA	Timed ambient

Freezer Room Temp: -10 degrees F		TD: 10 degrees F			
Condensing unit (12c)	Amps	Ref	BTU/hour	Evap Temp	Cond Temp
BQZA025L8-HT3A	11.3 - 208/3	448A	8,829	-20 degrees F	+95 degrees F
Evaporator coil (12d)	BTU/hour	CFM	Fan amps	Defrost amps	Defrost type
BLP209LE-S2B-T	8,829	1,910	1.2 - 208/1	8.2 - 208/1	Timed electric

Item 12a
COOLER CONDENSING UNIT
Specified as part of Item 12

Item 12b
COOLER EVAPORATOR COIL
Specified as part of Item 12

Item 12c
FREEZER CONDENSING UNIT
Specified as part of Item 12

Item 12d
FREEZER EVAPORATOR COIL
Specified as part of Item 12

Item 13
MOBILE SHELVING
Quantity - 10
Make - MetroMax Q*C166 or equal by Eagle or Cambro
Size - (6) 48 in. by 21 in., (4) 36 in. by 21 in., all 69 in. high on casters; four tier
Description - Shelving unit shall be all standard construction and shall consist of four shelves with removable injection molded polypropylene mats with antimicrobial product protection, supported on epoxy coated steel shelf frames and similar uprights with capped tops, and mounted on 5 in. diameter polyurethane tired swivel casters with donut bumpers.
Accessories - Provide with polymer posts in lieu of standard.

Item 14
MOBILE DUNNAGE PLATFORM
Quantity - Four
Make - New Age 1200 Series or equal by Channel or Kelmax
Size - (2) 48 in. by 20 in., (4) 42 in. by 20 in. and (1) 36 in. by 20 in.
Description - Dunnage platform shall be all standard construction with 1-1/2 in. by 1-3/4 in. by .070 in. thick wall extruded Type 6063-T5 aluminum tubing with four horizontal tubes and plate mounted casters with unit capable of supporting 1200 pounds.
Accessories - Provide three total 1208 handles. All casters to swivel.

Item 15
Spare number

Item 16
TRASH BARREL
Quantity - Two
No work in this Section. Item to be provided by Owner.

Item 17
WALL SHELF
Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, Carbone Metal Fabricators, or SML Stainless Steel Group
Size - 9 ft., 0 in. by 10 in. mounted 1 in. off face of wall up 54 in. above finished floor

Item 18
UTILITY CART
Quantity - Two
Make - Lakeside 521, Kelmax, Channel, or an approved equal
Size - 32-5/8 in. by 19-3/8 in. by 34-1/2 in.
Description - Cart shall be all standard NSF construction, stainless steel throughout, with top and bottom shelves supported by an angle frame, and mounted on two 8 in. fixed and two 5 in. swivel casters. Capacity of cart to be 650 pounds.

Item 19
MANUAL CAN OPENER
Make - Edlund S-11 or equal by Garde or Nemco
Description - Opener shall be all standard construction with cast stainless steel body, base and blade. Install on table per plan.

Item 20
COOK'S TABLE WITH SINK
Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, Carbone Metal Fabricators, or SML Stainless Steel Group
Size - 9 ft., 0 in. by 30 in. by 36 in. high plus 10 in. high splash at wall; 18 in. by 20 in. by 10 in. deep integral sink basin
Construction - 14 gauge stainless steel top, basin, and splash over angle frame, front and ends formed in turndown, rear formed in tall splash, six legs with gussets and adjustable feet, partial undershelf, two crossrails, secured 3 in. off face of wall.
Accessories - Drawer assembly, splash mounted faucet set, and a 2 in. lever waste outlet.

Item 21
MOBILE EQUIPMENT STAND
Quantity - Two
Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, Carbone Metal Fabricators, or SML Stainless Steel Group
Size - 30 in. by 30 in. by 32 in. high
Construction - 14 gauge stainless steel top over channel frame, edges formed in turn down, mounted on four legs with gussets, undershelf, and 5 in. diameter casters, two with brakes.

Item 22
AUTOMATIC SLICER
Make - Hobart HS9 or equal by Bizerba or Globe
Power - 5 amps - 1/2 HP - 120/60/1 - cord and plug
Description - Slicer shall be all standard construction, automatic type with anodized cast aluminum housing and base, removable 13 in. diameter 304L stainless steel knife with removable ring guard cover, totally enclosed, permanently lubricated PSC knife motor, with poly-v belt drive, zero knife exposure, linear automatic carriage drive system with speeds of 28, 38, 48 and 58 strokes per minute, manual assist mode, and provided with thermoplastic coated steel feed grip, glass bead finished gauge plate and knife cover, tilting carriage, water protected push-button switches, top mounted and removable knife sharpener with two borazon stones, adjustable gauge plate from "0" to 1 in., lift lever system and rubber feet. Unit to be provided with mechanical and electrical interlocks to include home position start, close gauge plate to stop, carriage will not tilt away or remove if gauge plate is not closed, locked gauge plate when carriage is removed, no-volt release, and 30 second automatic shut-off without carriage motion. Slicer shall be NSF 8 compliant.
Accessories - Provide unit with knife removal tool

Item 23
HAND SINK
Quantity - Five
Make - Advance 7-PS-70-CM*C166 or equal by IMC Teddy or Krowne
Description - Units shall be all standard stainless steel construction with mounting bracket. Mount on wall with rim at 36 in. above floor
Accessories - Provide with a splash mounted faucet set with wrist handles (Item 23a), 3 in. flat strainer type (non-basket, non-lever) open type waste, chrome plated tailpiece, "P" trap and clean-out cap. Provide 8 in. high welded stainless steel splash on right end of two units adjacent to Items 22 and 52. Provide 8 in. high welded stainless steel splash on both sides of one unit between Items 20 and 26.

Item 23a
FAUCETS
Quantity - Five
Make - T&S Brass B-0330-04 modified or Fisher 1953 modified, or Encore
Description - Units shall be all standard construction with mixing body, 8 in. center inlets, and wrist blade handles. Modified unit shall be provided with 119X gooseneck with B-0199-02-F10 aerator tip in lieu of the standard.

Item 24
WASTE BIN
Quantity - Five
No work in this Section. Item to be provided by Owner.

Item 25
MOBILE WORK TABLE
Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, Carbone Metal Fabricators, or SML Stainless Steel Group
Size - 60 in. by 30 in. by 36 in. high
Construction - 14 gauge stainless steel top over angle frame with edges formed in turndown and mounted on four legs with gussets, 5 in. diameter swivel casters, two with brakes, and full undershelf.
Accessories - Drawer assembly.

Item 26
PREP COUNTER WITH SINK
Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, Carbone Metal Fabricators, or SML Stainless Steel Group
Size - 8 ft., 8 in. by 30 in. by 36 in. high plus 10 in. high splash at wall; two 18 in. by 20 in. by 10 in. deep integral sink basins
Construction - 14 gauge stainless steel top, basin, and splash over angle frame, marine edge front and ends, rear formed in tall splash, six legs with gussets and adjustable feet, partial undershelf, two crossrails, secured 3 in. off face of wall.
Accessories - Drawer assembly, splash mounted faucet set, and two 2 in. lever waste outlets.

Item 27
FOOD PROCESSOR
Make - Robot Coupe R301 Ultra, Berkel, Kitchen Aid, or an approved equal
Power - 12 amps - 120/60/1 - cord and plug
Description - Combination food cutter shall be all standard construction with 1-1/2 HP direct drive fan cooled capacitor start motor with brake, magnetic interlocks, stainless steel cutter bowl with handle and see-thru lid, continuous feed top unit with attached large feed pusher and two standard discs.

Item 28
MIXER
Make - Hobart HL-200 or equal by Globe or Univex
Power - 8 amps - 1/2HP - 120/60/1 - cord and plug
Description - Mixer frame and body shall be fabricated of welded heavy gauge steel finished in Hybrid Powder coat finish, and provided with a stainless steel splash guard at the column, stainless steel bowl guard with electrical interlock, single point bowl installation with swing-out bowl support, manual bowl lift and an attachment hub with No. 12 taper. Transmission shall be gear driven constant mesh heat treated and hardened gears on similar shafts be mounted in ball bearings with recirculating oil and grease to all gears and shafts. Mixing action shall be planetary and shall have speeds of 59 (stir), 107, 198, 365, agitator RPM speeds as selected by an external dial. Speeds to be selectable on-the-fly and include a soft start and stir speed while lifting the bowl into place and controlled with a 15 minute timer with automatic time recall
Accessories - Provide mixer with a 20 quart stainless steel bowl, one flat "B" beater and one "D" wire loop whip with stainless steel wires.

Item 29
WALL SHELF
Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, Carbone Metal Fabricators, or SML Stainless Steel Group
Size - 6 ft., 0 in. by 10 in. mounted 1 in. off face of wall up 54 in. above finished floor

Item 30
Spare number

Item 31
Spare number

Item 32
FOUR-BURNER RANGE WITH OVEN
Make - Vulcan 24S-4BN or equal by Southbend or Montague
Size - 24 in. by 32 in. by 37 in. high to work surface; 47 in. high overall
Rating - 3/4 in. gas inlet at 143,000 BTU/hour
Description - Range shall be all standard construction with fully welded aluminized steel frame, four 30,000 BTU/hour open burners with one pilot lights for every two burners, level cast iron removable grates, stainless steel front, sides, and back riser, 20-1/4 in. by 26 in. by 14-1/2 in. high thermostatically controlled 23,000 BTU/hour oven with two racks and safety pilot, full width pull-out crumb tray below burners, and provided with pressure regulator.

Accessories - Mount unit on 5 in. diameter heavy duty swivel casters, two with brakes. Provide with Flame Safety device with manual spark ignition for all open top burners, and oven pilot. Provide a 10 in. high stainless steel flue riser, and four stainless steel legs.

Item 33
FLOOR PAN AND GRATE
Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, Carbone Metal Fabricators, or SML Stainless Steel Group
Size - 20 in. by 36 in. by 4 in. deep inside dimensions; 23 in. by 39 in. overall
Construction - Pan shall be fabricated of 14 gauge stainless steel, all welded construction, pitched to a 4 in. ID drain fitting with stainless steel removable, perforated basket and perforated dome strainer. Long sides shall be fitted with integral grate support ledges. Provide a model CGF molded fiberglass grate (Chemgrate) with 1 in. by 4 in. pattern, 3/4 in. clear slots and ends finished in accordance with manufacturer's instructions. Grate shall be cut in a manner that closed pockets will not be formed where they rest on the pan ledges.

Item 34
FORTY-GALLON BRAISING PAN
Make - Groen BPP-40GC*C166 or equal by Market Forge or Fire-x
Size - 35-3/4 in. by 28-1/4 in. by 10 in. deep inside pan dimensions
Power - 5 amps - 120/60/1
Rating - 1/2 in. gas inlet at 144,000 BTU/Hour
Description - Unit shall be all standard stainless steel construction, with tubular support frame, adjustable feet, flanged feet at rear, electric motorized crank tilt mechanism with manual override and three position control switch, torsion bar counterbalanced hinged cover with vent, and a 40 gallon pan. The cooking surface shall be constructed with 5/8 in. thick stainless steel and bonded clad plate with integral heat transfer fins, and a multi-tube gas burner. Pan shall be polished to a 100 emery grit finish and provided with electronic ignition, 7 degrees off level cooking capable, power on switch and indicator light, heat on indicating light, thermostatically controlled and provided with a high limit cut-off.
Accessories - Provide unit with a faucet mounting bracket with a double pantry water fill faucet and aerator tip, and BPC pan carrier.

Item 35
CONVEYOR OVEN WITH MOBILE STAND
Make - Middleby Marshall PS520-1
Accessories - Stainless steel mobile stand

Item 36
Spare number

Item 37
Spare number

Item 38
Spare number

Item 39
WATER FILTER
Make - 3M ScaleGard HT SF165 Modified, Everpure, Selecto, or an approved equal
Description - Unit shall be all standard construction designed for wall mounting on the utility distribution system per plan, and consisting of a mounting bracket, quarter-turn cartridge release mechanism, manifold with integral pressure gauge, integral quarter turn shut-off valve, outlet check valve, filter cartridge with internal prefilter membrane and external scale feeder cartridge. Provide with HF95-CL chloramine reduction filter cartridge in lieu of standard HF65 cartridge.
Accessories - Provide four spare HF95-CL filter cartridges and four spare HF8-S cartridges.

Item 40
TWELVE PAN STEAMER
Make - Market Forge Sirius II-12*C166 or equal by Accutemp or Groen
Size - 24 in. by 28-1/2 in. by 63-1/2 in. high on legs
Power - (2) 2 amps - 120/60/1 - cords and plugs
Rating - Two 1/2 in. gas connections @ 27,000 BTU/hour each
Maximum Water Use - Less than 2 gallons per hour
Certification - Unit shall be Energy Star compliant
Description - Two compartment pressureless steamer with six pan capacity cavities capable of holding 12 in. by 20 in. by 2-1/2 in. deep pans shall be all standard construction with stainless steel body, boilerless, insulated coved corner cast aluminum cooking compartments with Teflon coated lining and reservoir, removable stainless steel racks and sloped walls and domed ceiling with heating elements, automatic water fill, gas burners below the reservoir, controls mounted in a drawer and consisting of illuminated on-off switch, standby, steam and super steam cook mode selector switch, indicator lights, dual direction circulation fan, low water and high limit switches, 60 minute mechanical timer with buzzer, and temperature probe failure shut down. Doors shall be field reversible with a flush paddle latch, insulated and provided with a silicone rubber gasket and magnetic door safety switch. Provide unit with two year parts and labor warranty and drain connections.
Accessories - Provide each unit with reservoir cover and mount on casters, two with brakes

Item 41
DOUBLE CONVECTION OVEN
Quantity - Two
Make - Blodgett DFG-200-ES or equal by Southbend or Montague
Size - 38-1/4 in. by 42-7/8 to include fan motor by 70-5/8 in. high
Power - (2) 8 amps - 1/3 HP - 120/60/1 - cords and plugs
Rating - 3/4 in. gas inlet at 100,000 BTU/Hour
Certification - Unit shall be Energy Star compliant

Description - Units shall be all standard construction with stainless steel front, sides and top, porcelain enameled steel interior with 29 in. by 28-1/4 in. by 20 in. high inside dimensions, 1 in. thick mineral fiber sheet insulation on top, back and sides, dual pane thermal glass windows in coupled doors, removable rack supports capable of holding eleven racks and five chrome plated steel wire racks, electronic ignition with fail-safe controls, solid state digital controls with separate temperature and time settings, timer with buzzer, cook and hold and fan pulse modes, manual gas service cut-off switch, removable dual tube burners, pressure regulators, two speed blowers with thermal overload protection and door interlock, and interior lighting with two 50 watt commercial bake oven lamps. Provide standard three year parts and labor warranty on the total oven and additional five year warranty on the door assembly exclusive of glass, parts only.

Accessories - Mount on heavy duty swivel casters. Manifold the two ovens for a single gas connection.

Item 42
Spare number

Item 43
FIRE SUPPRESSION SYSTEM

Make - Ansul R-102 "Overlapping" or equal by Kiddie or Pyrochem

Design - Provide an automatic liquid fire suppressant system sized to meet all local codes, UL 300 and NFPA Codes. System shall provide surface protection for cooking equipment, hood and the exhaust duct work, if required. Tanks shall be mounted in the hood manufacturer provided utility cabinet and piping shall run hidden wherever possible. All pipes and fittings used to convey the chemical shall be scale free steel, 40 weight. Exposed piping located within the ventilator shall be stainless steel or chrome and limited to vertical drops only. Horizontal piping shall be run over the ventilator's top. Nozzles shall be swivel type with metal caps. Detection shall be fusible links rated per codes, and system shall rely on no outside source of power. The system shall be provided with a control box with indicator to indicate system status. Control head shall also include integral micro switch offering "normally open" and "normally closed" terminals for use by the Electrical Contractor for the shut-down of equipment and the sounding of alarms. Suppressant tanks shall be stainless steel. Provide and install a remote pull station per codes, complete with cables, conduit and pulleys. Coordinate installation of remote pull station with General Contractor to provide a recessed junction box mounted for installing the pull box with cable conduit concealed within walls. Provide system with class-K extinguisher. **Delete standard gas valve. Gas valve shall be provided as part of Item 46**

Workmanship - Exposed stainless steel fittings and piping shall be assembled with special care to avoid marring or damaging the surfaces. Any pieces showing marks shall be removed and replaced with new materials. Chrome sleeves are not acceptable.

Test - Perform a puff test on the completed system and obtain the written approval of the local Fire Inspector.

Accessories - Provide metal blow-off caps on the nozzles.

Item 44
EXHAUST VENTILATOR
Make - AquaMatic AM-ND-2 or equal by Gaylord or Halton
Size - 24 ft., 0 in. plus 12 in. utility cabinet by 60 in. plus 10 in. extended rear stand-off by 24 in. high plus 4 in. high collars, consisting of 13 ft., 9 in. and 10 ft., 3 in. long canopies joined end-to-end, mounted up 6 ft., 8 in. above finished floor; flat bottom; two make-up air plenums each 25 ft., 0 in. by 12 in. by 6 in. high plus five 2-3/4 in. high collars; perforated bottom of make-up air plenums mounted flush with the ceiling grid.
Power - 1.4 KW - 120/60/1 to lights from Item 20
Exhaust Left - 4,469 total CFM through (2) 10 in. by 21 in. collars @ -0.983 in. static pressure.
Exhaust Right - 2,819 total CFM through a 10 in. by 27 in. collar @ -0.887 in. static pressure. Blower and ductwork provided and installed by Ventilation Contractor.
Supply Left - 1,678 total CFM through (3) 10 in. by 24 in. collars @ 0.145 in. static pressure
Supply Right - 1,373 total CFM through (2) 10 in. by 24 in. collars @ 0.173 in. static pressure. Air unit and ductwork provided and installed by Ventilation Contractor.
Description - Ventilator shall be of all standard construction, built of not less than 18 gauge 304 stainless steel throughout with welded joints and seams in accordance with NFPA-96, with reinforced front bottom edges with integral front baffle, double wall insulated fronts, and NSF Listed. Units shall have grease collection troughs, storage containers, and hanger brackets. Provide with 430 stainless steel Captrate Grease-Stop Solo Filter UL classified S-baffle extractors that shall remove at least 75 percent of grease particles five microns in size, and 90 percent of grease particles seven microns in size and larger, with a corresponding pressure drop not to exceed 1.0 inches of water gauge. Provide all materials necessary for the hanging of the ventilator. Make-up air plenum box shall be standard construction fabricated in accordance with NFPA Pamphlet 96 and shall be NSF and UL approved and/or listed. All exposed surfaces of the body shall be 18 gauge 304 type stainless steel with a number 4 finish. The box will have a bottom discharge through removable perforated stainless steel panels and will include internal baffling to provide even air distribution. Mount with the bottom of the plenum box flush with the ceiling grid
Accessories - Provide unit with fourteen recessed UL Listed LED light fixtures, factory prewired and left ready for final connection by the Electrical Contractor. Provide utility cabinet on right end, and closure trim per detail to a point 3 in. above finished ceiling to close to adjacent surfaces on four sides. Provide one filter removal tool, quarter end panels, and balancing dampers.

Item 45
VENTILATOR DEMAND CONTROL SYSTEM
Make - CaptiveAire DCV or equal by Gaylord or Halton
Power - 20 amps circuit - 120/60/1 to logic controller
Scope - Furnish and install complete exhaust control system for the exhaust canopy in accordance with the plans and Manufacturers shop drawings. The system shall include programmable logic controller (PLC), variable frequency drive (VFD), stainless steel control enclosure, exhaust duct temperature sensors, room temperature sensor, LCD screen interface with cable, all specified accessories, and those components required to provide complete and satisfactory systems in accordance with accepted HVAC practice. System shall control Item 44. Mount LCD screen control in UDS riser.
Mount system processor in the cabinet mounted on the left end of exhaust ventilator.
Important: The installation work shall be performed by a fully qualified contractor employing a certified mechanic fully trained in the installation of the DCV hood system. Submittal shall list the installing company and the qualified system installer. Provide wiring diagrams and guidance to related trades to achieve correct operation of the system.
Accessories - Service Design Verification: Factory Services and on site coordination to be performed by the Manufacturers service technician (not a sales representative). On site supervision shall include two site visits: One visit to coordinate preparations for installation, and a second visit at startup and calibration.
Accessories - Provide BacNet monitoring system.

Item 45a
VENTILATOR CONTROL INTERFACE
Specified as part of Item 45

Item 45b
ROOM TEMPERATURE SENSOR
Specified as part of Item 45

Item 46
UTILITY DISTRIBUTION SYSTEM
Make - AquaMatic AM-UDI or equal by Gaylord or Halton
Size - 25 ft., 0 in. by 12 in. by 6 ft., 8 in. high
Power - 50 amps circuit - 120/208/60/3
Rating - 2 in. gas manifold at 581 MBTU/Hour (1,175 MBTU/Hour capacity)
Description - Utility distribution system shall be all standard construction of 300 series stainless steel with primary service riser, secondary riser and a horizontal raceway with separate compartments for plumbing and electrical services. Plumbing compartment shall include a gas manifold with electric gas valve, service drops with shut-off valves, Dormont quick disconnect gas hoses and flexible water connectors. Electrical compartment shall include bus bar with individually sized breakers along raceway. Primary riser shall include breaker panel with main shunt trip breaker, emergency kill switch with status lights, two GFI convenience outlets, pre-plumbed 2 in. electric gas valve, and gas delay reset. Mount demand control system interface screen in riser. Provide bumper strips on back side of assembly.

Item 50
MOBILE PAN RACK
Quantity - Two
Make - New Age 1332, Channel, Piper, or an approved equal
Size - 20-1/2 in. by 26 in. by 69 in. high
Capacity - Fifteen 18 in. by 26 in. pans on 4 in. centers
Description - Rack shall be fabricated of welded extruded aluminum 1 in. by 1 in. by .070 in. tubular uprights and framing, and 1-1/4 in. by 1-5/8 in. by .100 in. angle pan slides with corners chamfered and deburred. Gussets of 1-1/2 in. by 1-1/2 in. by 5/8 in. angle aluminum shall be welded to the bottom inside angles where horizontal bracing meets vertical uprights. Mount on platform type, 5 in. polyurethane tired swivel casters.

Item 51
MOBILE UTENSIL STORAGE RACK
Quantity - Two
Make - MetroMax Q*C166 or equal by Eagle or Cambro
Size - 42 in. by 21 in. by 69 in. high on casters; four tier
Description - Shelving unit shall be all standard construction and shall consist of four shelves with removable injection molded polypropylene mats with antimicrobial product protection, supported on epoxy coated steel shelf frames and similar uprights with capped tops, and mounted on 5 in. diameter polyurethane tired swivel casters with donut bumpers.
Accessories - Provide with polymer posts in lieu of standard.

Item 52
CLEAN WARE TABLE
Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, Carbone Metal Fabricators, or SML Stainless Steel Group
Size - 45 in. by 30 in. by 34 in. high plus 10 in. splash at wall; 3 in. high raised roll at front and end
Construction - 14 gauge stainless steel top and splash over channel frame with raised roll front and end, tall splash at rear, turned down into dishwasher and secured with stainless steel machine screws, and mounted on two legs with gussets, and adjustable feet. Provide a 36 in. long undershelf welded to table legs at one end and mounted at opposing end on two 10 in. high legs with gussets, and adjustable feet. Secure table 3 in. off face of wall.

Item 53
WAREWASHER, VENTLESS
Make - Hobart AM-15VLT (Hot Water Sanitizing) or equal by Champion or Stero
Power - 45.4 amps - 208/60/3
Maximum Water Use - 0.74 Gallons per Rack
Certification - Unit shall be Energy Star compliant
Description - Dishwasher shall be door type with extended hood of all standard construction with 40 rack per hour capacity, 16 gauge stainless steel drawn tank, 18 gauge stainless steel chamber, and 12 gauge stainless steel frame and stainless steel feet, microcomputer controls with digital status indicators and LED cycle display and temperature readings, 1, 2, 4 and 6 minute timed cycles, thermostatically controlled electric tank heat with low-water cut-off, internal condensing system with 1/2 HP condenser blower motor, corrosion resistant tube and fin condenser coil, and heat energy recovery from condensation chamber, interchangeable upper and lower revolving wash arms, door actuated drain closer, self flushing stainless steel strainer pans with removable scrap basket, snap-in front panel and front access door. Tank doors shall be coupled with a chrome plated lift handle and counter balanced and fitted with a cycle starting switch. Pump shall be stainless steel with stainless steel impeller and shaft, fitted with a stainless steel and carbon ceramic seal, capable of 160 gallon per minute flow and self draining. Motor shall be 2 HP, three phase, squirrel cage, induction-run type with inherent thermal protection, grease packed ball bearings, splashproof design, and ventilated.
Accessories - Provide machine with Sense-A-Temp 70 degree F rise electric booster heater, single point electrical connection, and four plastic racks; two peg, two flat. Provide drain water tempering kit.

Item 54
THREE-COMPARTMENT SINK
Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, Carbone Metal Fabricators, or SML Stainless Steel Group
Size - 12 ft., 0 in. by 30 in. by 34 in. high plus 10 in. high splash at rear; 3 in. high raised open roll on front and end, three 21 in. by 27 in. by 12 in. deep integral sink basins.
Construction - 14 gauge stainless steel top, basins and splash, stainless steel channel reinforced, six legs with gussets, adjustable feet, and five lengths of crossrail. Secure 3 in. off face of wall. Top of splash shall be fitted with integral flat spot for mounting of the hose reel assembly fixture. Turn end down into dishwasher and secure with stainless steel machine screws and nuts. Provide each sink basin with a lift out, 16 gauge stainless steel cover with all edges flanged down 1 in., corners rounded and welded, provided with two neatly punched thumb holes, and designed to rest on 1/4 in. rod stock supports welded across the basin corners at proper height to provide a flush surface. Provide a hook under the drainboard for hanging the lids when not in use. Weld disposer cone integral and provide a rigid stainless steel bracket for mounting of the disposer control switch in a set back position below the drainboard.
Accessories - Provide two splash mounted pot sink fill faucet sets and three 2 in. lever waste outlets.

Item 55
DETERGENT SYSTEM
No work in this Section. Item to be provided by Owner's Vendor.

Item 56
WALL SHELF
Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, Carbone Metal Fabricators, or SML Stainless Steel Group
Size - 60 in. by 10 in. mounted 1 in. off face of wall up 54 in. above finished floor

Item 57
DISPOSER
Make - In-Sink-Erator SS-200-18A*C166, Salvajor, Red Goat, or an approved equal
Power - 3.3 amps - 2 HP - 208/60/3
Description - Disposer shall be all standard construction with stainless steel grinding chamber, Hycar resilient mounting with chrome plated exterior, and grinding chamber water inlet. Motor shall be clad with a stainless steel cover and shall be totally enclosed, fan cooled, induction type with built-in manual reset inherent thermal overload protection, double tapered Timkin roller bearings, centrifugal moisture shield, pressure relief vent, timed or continuous run operation options, and provided with two 24 volt solenoid valves and two flow control valves (1 GPM & 7 GPM). Weld cone integral with the drainboard.
Accessories - Provide unit with a No. 18A cone assembly integral with the drainboard, complete with safety baffle and stopper, bowl cover, water inlet for mounting in sink basin, a solenoid valve, vacuum breaker, and an AS-101 AquaSaver control center for mounting on fabricator provided bracket below the dish table.

Item 58
HOSE REEL ASSEMBLY
Make - T&S Brass B-1457-7102-01C, Fisher, Reel Craft, or an approved equal
Size - 12 foot hose, 3/8 in. ID
Maximum Water Use - 1.07 gallons per minute
Description - Unit shall be all standard construction with stainless steel open type reel, adjustable bumper, blue hose, B-107-J low flow spray valve, heat resistant spray valve handle, chrome risers, two wall brackets, continuous pressure vacuum breaker, 36 in. flexible water hose, control valve, and deck type base faucet, designed for wall mounting per plan up 7 ft., 6 in. measured at the inlet.
Accessories - Provide with stainless steel pivoting wall bracket.
Installation - The hose reel bracket for wall mounted units shall be rotated 90 degrees downward and installed such that it allows the hose to hang straight down and parallel to the wall. Refer to T&S Brass instructions manual page four figure one for further details.

Item 61
MOBILE WORK TABLE
Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, Carbone Metal Fabricators, or SML Stainless Steel Group
Size - 60 in. by 30 in. by 36 in. high
Construction - 14 gauge stainless steel top over angle frame with edges formed in turndown and mounted on four legs with gussets, 5 in. diameter swivel casters, two with brakes, and full undershelf.
Accessories - Drawer assembly.

Item 62
Spare number

Item 63
MOBILE WORK TABLE
Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, Carbone Metal Fabricators, or SML Stainless Steel Group
Size - 60 in. by 30 in. by 36 in. high
Construction - 14 gauge stainless steel top over angle frame with edges formed in turndown and mounted on four legs with gussets, 5 in. diameter swivel casters, two with brakes, and full undershelf.
Accessories - Drawer assembly.

Item 64
REFRIGERATOR, REACH-IN
Make - Victory RS-2D-S1-HD-HC, or equal by Continental or Utility
Size - 52-1/8 in. by 35 in. by 84-1/4in. high overall
Power - 6.5 amps - 120/60/1 - cord and plug
Doors - Half height, standard hinging
Certification - Unit shall be Energy Star compliant
Description - Refrigerator shall be all standard construction with stainless steel exterior, aluminum interior, self-closing door hardware with a hold-open at 120 degrees, Humidity control wires around the door jamb, automatic LED interior lighting, exterior digital thermometer, heavy duty epoxy plated wire shelves adjustable in one inch increments, self-contained top mounted refrigeration system capable of maintaining a 33 degree to 38 degree temperature range with Secure-Temp 1.0 temperature monitoring technology, condensate evaporator, and R-290 Refrigerant.
Accessories - Provide adjustable tray slide kit in the top half, and two shelves in the bottom half. Provide with stainless steel kick plate.

Item 65
PASS-THROUGH HOT FOOD CABINET
Make - Victory HS-1D-PT-HD, or equal by Continental, Utility or an approved equal
Size - 26-1/2 in. by 35-1/4 in. by 84-1/4 in. high overall
Power - 6.3 amps - 208/60/1 - cord and plug (NEMA 6-20P)
Doors - Half height, hinged on left (both sides)
Description - Heated cabinet shall be all standard construction with stainless steel exterior, stainless steel coved interior floor and ceiling, stainless steel interior walls and door liner, foamed-in-place polyurethane insulation, self-closing door hardware with a hold-open at 120 degrees, automatic interior lighting, exterior digital thermometer, heavy duty epoxy plated wire shelves adjustable in one inch increments, built-in adjustable humidity control vent, externally mounted blower, safety shielded strip type heating elements, adjustable electronic temperature control from 80 degrees to 180 degrees Fahrenheit with Secure-Temp 1.0 temperature monitoring technology. Mount on 6 in. high stainless steel legs.
Accessories - Provide adjustable tray slide kit in the top and bottom sections. Provide with stainless steel kick plate.

Item 66
Spare number

Item 67
PASS-THROUGH HOT FOOD CABINET
Make - Victory HS-1D-PT-HD, or equal by Continental, Utility or an approved equal
Size - 26-1/2 in. by 35-1/4 in. by 84-1/4 in. high overall
Power - 6.3 amps - 208/60/1 - cord and plug (NEMA 6-20P)
Doors - Half height, hinged on right (both sides)
Description - Heated cabinet shall be all standard construction with stainless steel exterior, stainless steel coved interior floor and ceiling, stainless steel interior walls and door liner, foamed-in-place polyurethane insulation, self-closing door hardware with a hold-open at 120 degrees, automatic interior lighting, exterior digital thermometer, heavy duty epoxy plated wire shelves adjustable in one inch increments, built-in adjustable humidity control vent, externally mounted blower, safety shielded strip type heating elements, adjustable electronic temperature control from 80 degrees to 180 degrees Fahrenheit with Secure-Temp 1.0 temperature monitoring technology. Mount on 6 in. high stainless steel legs.
Accessories - Provide adjustable tray slide kit in the top and bottom sections. Provide with stainless steel kick plate.

Item 70
FILL FAUCET
Quantity - Two
Make - T&S Brass B-0208, Fisher, Encore, or an approved equal
Description - Unit shall be all standard construction with a B-199-02F-12 aerator tip.

Item 71
DROP-IN HOT FOOD WELL
Quantity - Eight
Make - Piper CCF-D-A-I-L-20-10, Hatco, Wells, or an approved equal
Power - 1.0 KW - 208/60/1 each
Description - Hot food wells to be all standard construction, top mount type with one-piece, coved corner stainless steel interior, galvanized steel outer wrap, insulated on five sides, lead wires encased in Fabricator provided flexible armored conduit, drain outlet, infinite heat switch controls with off position, and mounting hardware. Groups of wells shall be Fabricator wired to a single point with disconnect switch in accordance with UL Requirements.
Accessories - Mount in two groups of four and provide a quarter turn ball type shut-off valve and Fabricator installed 3/4 in. copper manifold connecting the wells, complete with cleanout, left ready for extending to the floor drain by the Plumbing Contractor.

Item 72
DROP-IN COLD PAN
Quantity - Two
Make - Hatco CWB-2 or equal by Atlas or Wells
Size - 32 in. by 27 in. by 25-1/2 in. high
Power - 6.7 amps - 1/4 HP - 120/60/1 - cord and plug
Description - The NSF 7 approved refrigerated drop-in well shall be standard construction per the manufacturer's standard details with an angled interior wall design. Unit shall utilize R-404A refrigerant and consist of aluminized steel housing with a stainless bezel, mounted electronic temperature control, pan support bars for full-size pans, condenser unit (can be rotated), compressor with flexible refrigerant lines, sight glass, service valves, receiver, and dryer/filter.
Accessories - Provide optional five year warranty on the compressor. Provide with 20 in. pan support bar and perforated false bottom.

Item 73
SERVING COUNTER
Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, Carbone Metal Fabricators, or SML Stainless Steel Group
Size - 12 ft., 6 in. by 33 in. plus 10 in. deep trayslide by 36 in. high; 32 in. high to top of trayslide; mitered trayslide corners per plan
Power - 4.0 KW - 208/60/1 to disconnect for four hot food wells
20 amps circuit - 120/60/1 to apron mounted GFI outlet
20 amps circuit - 120/60/1 to body mounted GFI outlet at cold pan
Construction - Same as Item 74
Accessories - Provide with a 69 in. long (between end supports on center) Versa-Gard VG6S-CT protector case with brushed stainless steel finished uprights, surface mount flanges, and mounted over hot wells. Provide with a 42 in. long (between end supports on center) Versa-Gard VG9 self-serve food protector with 3/8 in. top glass, brushed stainless steel finished uprights, surface mount flanges, and mounted over cold pan.

Item 73a
FOOD PROTECTOR CASE
Specified as part of Item 73

Item 73b
FOOD PROTECTOR DISPLAY CASE
Specified as part of Item 73.

Item 74
SERVING COUNTER
Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, Carbone Metal Fabricators, or SML Stainless Steel Group
Size - 12 ft., 6 in. by 33 in. plus 10 in. deep trayslide by 36 in. high; 32 in. high to top of trayslide; mitered trayslide corners per plan
Power - 4.0 KW - 208/60/1 to disconnect for four hot food wells
20 amps circuit - 120/60/1 to each of two apron mounted GFI outlets
20 amps circuit - 120/60/1 to body mounted GFI outlet at cold pan

Construction - 14 gauge stainless steel top over angle frame with all edges turned down 2 in. and corners welded. Provide raw openings for the hot food wells and a flanged opening for the refrigerated pan with all edges flanged down 1 in. and corners filled and welded.

Mount on eight 2 in. square 16 gauge stainless steel tubular legs with Component Hardware A15-0851 adjustable feet. Reinforce between all front and end legs with 2 in. square stainless steel tubing welded in place 6-1/4 in. clear above floor. Provide similar reinforcement between rear legs where an undershelf does not exist.

Undershelves shall be fabricated of 16 gauge stainless steel with reinforcing and sound deadening as specified for open base table undershelves. Front face shall be turned down 1-1/2 in. and in 1/2 in. at 45 degrees. Rear and ends shall be turned up 1-1/2 in. and corners welded. Weld to legs at a point 10 in. above floor. Shelf shall be mounted on the inside face of legs, not cut-out at each leg. Leave 2 in. clearance between the shelf edge and the counter front and end panels for passing of services by Related Trades.

Trayslide shall be fabricated of 14 gauge stainless steel with front and ends turned down and corners welded. Rear shall be turned up under the counter front edge Mount on Component Hardware J19-4966 brackets bolted through the front panels to reinforced area.

Front and ends of counter shall be provided with plastic laminate clad panels. Plastic laminate manufacturer shall be as selected by the Architect. Plastic laminate color shall be as selected by the Architect from Wilsonart's full range of colors. Panels shall be mounted with a minimum of joints. All joints to be hairline type. Joint between a front and end panel shall appear on the end panel face. Panels shall be secured to counter legs and crossrails with welded stainless steel clips and stainless steel wood screws. Do NOT secure THROUGH the legs or crossrails. Provide a continuous 14 gauge support-protector strip at the lower edge of all finish panels, extending 1/16 in. past front face.

Apron shall be provided per elevations, fabricated of 18 gauge stainless steel, and shall be used for the mounting of switches, outlets, and controls. Apron shall include a formed reinforced bottom edge and shall be set in 1 in. from leg face.

Accessories - Provide with a 69 in. long (between end supports on center) Versa-Gard VG6S-CT protector case with brushed stainless steel finished uprights, surface mount flanges, and mounted over hot wells. Provide with a 42 in. long (between end supports on center) Versa-Gard VG9 self-serve food protector with 3/8 in. top glass, brushed stainless steel finished uprights, surface mount flanges, and mounted over cold pan.

Item 74a
FOOD PROTECTOR CASE
Specified as part of Item 73

Item 74b
FOOD PROTECTOR DISPLAY CASE
Specified as part of Item 73

Item 75
MILK COOLER
Make - Beverage-Air STF58HC-1-S*C166, Continental, True, or an approved equal
Size - 58 in. by 34 in. by 47-3/4 in. high; sixteen 13 in. by 13 in. by 11 in. milk crate capacity
Power - 3.3 amps - 1/3 HP - 120/60/1 - cord and plug
Description - Dual access milk cooler shall be all standard construction with stainless steel interior and exterior fronts and ends, self-contained refrigeration system with thermostatic controls and blower, urethane foam insulation, exterior dial thermometer, and hinged and lockable drop-front covers. Interior shall be fitted with a vinyl coated wire rack. Mount on 4 in. diameter swivel casters and provide with R-290 refrigerant.
Accessories - Provide unit with optional five year compressor warranty

Item 76
MOBILE CONDIMENT COUNTER
Quantity - Two
Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, Carbone Metal Fabricators, or SML Stainless Steel Group
Size - 48 in. by 27 in. by 32 in. high
Construction - 14 gauge stainless steel top over angle frame with all edges turned down 2 in. and corners welded. Mount on four 2 in. square legs with undershelf and plastic laminate clad panels on four sides all of similar construction to the serving counter. Rear face shall be provided with a pair of hinged doors in a 36 in. wide opening. Provide 5 in. diameter swivel casters; two with brakes.

Item 77
MOBILE CASHIER STAND
Quantity - Two (one left, one right)
Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, Carbone Metal Fabricators, or SML Stainless Steel Group
Size - 30 in. by 30 in. by 36 in. high main section with 42 in. by 12 in. trayslide set at 32 in. above floor; mitered trayslide corner per plan
Construction - 14 gauge stainless steel top over angle frame with all edges turned down 2 in. and corners welded. Provide a 3 in. diameter grommeted hole in top behind the cashier terminal for cable passage. Mount on four 2 in. square legs with crossrails on three sides, footrest set in 8 in., undershelf and plastic laminate clad panels on three sides and solid mounted trayslide all of similar construction to the serving counter. Mount trayslide on fold down brackets. Provide 5 in. diameter swivel casters; two with brakes.
Accessories - Provide unit with a Component Hardware S95-1000 locking cashier drawer.

Item 78
CASHIER TERMINAL
Quantity - Two
No work in this Section. Item to be provided by Owner.

Item 79
Spare number

Item 80
CLEAN WARE TABLE
Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, Carbone Metal Fabricators, or SML Stainless Steel Group
Size - 63 in. by 28 in. by 34 in. high plus 10 in. splash at walls; 3 in. high raised roll at front
Construction - 14 gauge stainless steel top and splash over channel frame with raised roll front, tall splash at rear and end, turned down into dishwasher and secured with stainless steel machine screws, and mounted on four legs with gussets, adjustable feet and undershelf. Secure table 3 in. off face of wall.

Item 81
WAREWASHER, CONVEYOR, VENTLESS (ADD ALTERNATE)
Make - Champion 44 PRO VHR*C166, Hobart, Stero, or an approved equal
Size - 60 in. by 35-3/4 in. by 64-1/4 in. high to top of machine; 89 in. high over top mount heat recovery system
Power - 78 amps - 208/60/3 (machine); 58 amps - 208/60/3 (booster heater)
Conveyor speed - 5.8 feet per minute; 209 racks per hour
Maximum Water Use - 0.48 gallon per rack
Certification - Unit shall be Energy Star compliant
Description - Dishwasher shall be all standard stainless steel construction throughout, single tank machine having hood with integral tank, top mount ventless heat recovery system, mounted on a frame with adjustable feet and removable closure panels on the front and ends. Vertical clearance shall be 20-3/4 in. to accept standard sheet pans. Hood to have full 180 degree opening leak proof insulatedhinged access doors. All interior surfaces to be stainless steel including easily removable scrap basket, two-piece scrap screens and one-piece cast stainless steel upper and lower spray assemblies. Stainless steel pump shall be self draining type with cast stainless steel impeller and designed to be non-clogging with standard NEMA frame, drip-proof pump motor and with grease packed ball bearing shaft. Provide a pre-wired top mounted control panel having an approved magnetic motor starter with overload heaters and low voltage protection for each motor, energy saver idle pump shut-down, touch screen user interface with self-diagnostics, problem recognition, and repair recommendation, and 120 volt control circuit. Tank heater shall consist of a 15.0 KW element in the wash tank with thermostatic control and low-water cut-off. Furnish standard temperature thermometers for tank and final rinse line, vacuum breaker and air gap, fill valve, door operated drain valve, splash curtains, door safety switch, automatic tank fill, common hot water connection and final rinse saver.

Accessories - Provide machine with built-in 21.0 KW electric hot water booster, ION scale prevention device, table limit switch, drain water tempering kit, and standard assortment of three plastic dish racks; two peg, one flat. Provide with 30 in. cantilever sideloader.

Item 82
Spare number

Item 83
SOILED WARE TABLE WITH PASS-THROUGH FRAME
Make - Fabricate per General Construction this Section by Custom Metals of Massachusetts, Carbone Metal Fabricators, or SML Stainless Steel Group
Size - 10 ft., 3 in. by 27 in. plus 7 ft., 6 in. by 27 in. return to dishwasher, plus pass-thru by 34 in. high plus 10 in. high splash at walls; 3 in. high raised open roll on working faces and end; 54 in. by 48 in. pass thru with 35 in. sill height; 18 in. by 18 in. by 8 in. deep integral sink; approximately 10 ft., 0 in. long by 5 in. by 5-1/2 in. to 3 in. deep sloped trough from pass-window to sink, shaped per plan.
Construction - 14 gauge stainless steel top, sink basin, trough and splash, channel frame, twelve legs with gussets, adjustable feet, and eleven crossrails. Secure 3 in. off wall. Turn end down into sideloader and secure with stainless steel machine screws. Prepare end for integration with dishwasher sideloader. Top of splash shall be fitted with integral flat spot for mounting of the pre-rinse fixture. Top shall pass through the wall and be an integral part of the pass window. Pass-thru ledge shall extend through the wall and be secured to the frame. Provide a 16 gauge stainless steel telescoping window frame at the opening with front edges turned out 2 in. and returned 1/2 in.. Rear edges to be turned out 2-1/2 in. flat to wall. Integral scrapping sink shall be provided with a 2 in. by 1/4 in. bar stock rack guide attached to the reinforced splash with stainless steel through bolts. Sink shall be provided with two 16 gauge perforated stainless steel scrapping baskets, 6 in. deep, on 1/2 in. high angle legs set back to clear the basin cove, and integral tubular handles flush with counter tops.
Accessories - Provide unit with a 2 in. free flow waste outlet Component Hardware D36-2080

Item 84
HOSE REEL ASSEMBLY
Make - T&S Brass B-1457-7102-01C, Fisher, Reel Craft, or an approved equal
Size - 12 foot hose, 3/8 in. ID
Maximum Water Use - 1.07 gallons per minute
Description - Unit shall be all standard construction with stainless steel open type reel, adjustable bumper, blue hose, B-107-J low flow spray valve, heat resistant spray valve handle, chrome risers, two wall brackets, continuous pressure vacuum breaker, 36 in. flexible water hose, control valve, and deck type base faucet, designed for wall mounting per plan up 7 ft., 6 in. measured at the inlet.
Accessories - Provide with stainless steel pivoting wall bracket.
Installation - The hose reel bracket for wall mounted units shall be rotated 90 degrees downward and installed such that it allows the hose to hang straight down and parallel to the wall. Refer to T&S Brass instructions manual page four figure one for further details.

Item 85
ROLL-DOWN SHUTTER
Make - Raynor DuraShutter Select/surface mount or equal by Alpine or Cornell
Size - Opening approximately 54 in. wide by 50 in. high; verify
Description - Assembly shall be all standard construction and shall consist of a self-coiling rolling counter shutter, all anodized aluminum construction with interlocking extruded slats, extruded aluminum bottom bar with rubber astragal, designed for surface type mounting with extruded guides with wool pile inserts, and complete with recessed inside lifting handles and thumb-turn locks, and complete covers.
Installation - Install with tracks located 1 in. clear above table surface to permit proper cleaning.

Item 86
Spare number

PART 3 EXECUTION

3.01 SANITATION REQUIREMENTS

A. Equipment specified herein shall be fabricated to conform to the "Food Service Equipment Standards" of the National Sanitation Foundation prepared by the Committee on Food Service Standards, and published by the National Sanitation Foundation, Ann Arbor, Michigan. Any differences of opinion on sanitation will be referred to the State Department of Health for a ruling.

B. Equipment shall be installed in accordance with the manufacturer's instructions and the best practices of the food service industry, with careful attention to eliminating all cracks, crevices and concealed spaces in wet areas that would be difficult to clean or keep free of vermin and soil.

3.02 EXAMINATION AND ACCEPTANCE

A. Determine whether the General Contractor shall furnish and provide temporary power and light, openings and storage space to permit scheduled delivery of equipment. Verify water pressure and provide necessary reducing valves.

B. Examine space in which specified work is to be installed to assure that conditions are satisfactory for the installation of specified work. Report in writing to the Architect, any deficiency in the work of other contractors affecting specified work. Commencement of specified work will be construed as acceptance of space conditions.

C. Obtain and verify all measurements and conditions on the job, and assume responsibility in respect to same.

D. Inspect flooring, wall finishes, painting, ceiling installation and all related work for readiness to commence installation of foodservice equipment. Verify the existence of required mechanical and electrical rough-ins.

3.03 CLEANING UP

A. Debris and surplus materials resulting from installation work shall be removed promptly as work progresses, to a location indicated by the General Contractor.

B. Following completion, and before final acceptance by the Owner, clean finished surfaces in accordance with the manufacturer's instructions, and leave specified work free of imperfections.

3.04 DEMONSTRATION AND OPERATING INSTRUCTIONS

A. Before final acceptance, and by appointment with the Owner and his representatives, completely demonstrate with power, the correct operation of each new item of operating equipment.

B. Prior to the demonstration, turn on all mechanical and electrical foodservice equipment. Test for leaks, poor connections, and inadequate or faulty performance and correct if necessary. Adjust for proper operation. Thermostatically controlled equipment and equipment with automatic features shall be operated for a sufficient length of time with proper testing equipment to prove controls are functioning as intended. Recalibrate thermostats if necessary.

C. Provide Architect or Consultant with a loose leaf bound manual of operating data and maintenance instructions (three copies) containing complete description, wiring diagrams, operating data, maintenance requirements and other information pertaining to the proper operation and upkeep of the various items of electrical or mechanical equipment. Include names, addresses and telephone numbers of authorized service agencies for all items. Arrange all material in alphabetical order by Manufacturer. Book shall be turned over to Owner after review and approval.

D. Submit guarantees and warrantees to the Architect in the above specified manuals with all warranty cards completed and becoming effective at the time the equipment was satisfactorily demonstrated.

3.05 PROTECTION OF WORK

A. Protect specified work from damage during transportation to the project site, storage at the site, during installation, and after completion until acceptance by the Owner.

B. Protect adjacent work under other contracts during installation until completion of specified work. After completion, the contractor for other work shall be responsible for the protection of his work until acceptance by the Owner.

C. Damaged work as determined by the Architect, shall be repaired or replaced as determined by the Architect.

END OF SECTION

SECTION 115213

PROJECTION SCREENS

PART 1 GENERAL

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish and install the following items for installation under the designated SECTION:

1. Above ceiling mounted, electrically operated automatic rear projection screen above Cafeteria stage.
2. Electrically operated automatic projection screen at Gymnasium.

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be prepared under the designated SECTION:

1. Power wiring for motorized screens: SECTION 260001-ELECTRICAL.
2. Blocking for mounting platform / cafeteria screen (SECTION 061000-ROUGH CARPENTRY) and wood panel wall finish (SECTION 062000-FINISH CARPENTRY).
3. Bent plate mounting brackets for gymnasium screen: SECTION 050001-MISCELLANEOUS AND ORNAMENTAL IRON.

1.04 SUBMITTALS

A. Submit complete shop drawings in accordance with requirements of SECTION 013300-SUBMITTALS.

B. Shop drawings shall include large scale mounting details showing surrounding construction, manufacturers specifications, and electrical characteristics and wiring diagrams for electrically operating screens.

PART 2 PRODUCTS

2.01 MANUFACTURE

A. To establish a standard of quality, design and function desired, drawings and specifications are based on projection screens manufactured by Da-Lite Filmscreen. Similar projection screens by Stewart and Draper will be considered for approval by the Architect upon receipt of adequate supporting data and samples.

2.02 AUTOMATIC ELECTRIC REAR PROJECTION SCREEN (CAFETERIA)

A. Tensioned Advantage Deluxe (34623C) electrically operated dual vision rear projection screen as follows:

1. Motor and Controls – Electrically operated 120 volt (60Hz), 1 amp. Motor shall be quick reversing, oiled for life, with automatic thermal overload cut-out, integral gears, capacitor and an electric brake to prevent coasting. Motor controls shall be low voltage with three button (up/stop/down) switch and coverplate in standard 1-gang flush wall box. Screen to be listed by Underwriters' Laboratories and CSA.
2. Screen Construction – Screen shall be tab-tensioned with tensioning cable system to prevent curl and wrinkles. Screen fabric shall be flame retardant and mildew resistant. Screen image surface shall be seamless, 1.3 gain. Image size as follows:
   a. Size: Wide format (16:10): 139 in. wide x 87 in. high, with 12 in. of black drop
   b. Case Construction: Designed with wall trim and white powder coated case. No closure doors required at case opening.
3. Mounting – Include all brackets, suspension members and fasteners required by job conditions to wall mount to the inside face of the proscenium wall as shown on the drawings.

2.03 AUTOMATIC ELECTRIC PROJECTION SCREENS (GYMNASIUM)

A. Tensioned Contour Electrol electrically operated projection screen as follows:

1. Motor and Controls – Electrically operated 120 volt (60Hz), 1 amp. Motor shall be quick reversing, oiled for life, with automatic thermal overload cut-out, integral gears, capacitor and an electric brake to prevent coating. Motor controls shall be low voltage with three button (up/stop/down) switch and coverplate in standard 1-gang flush wall box. Screen to be listed by Underwriters' Laboratories and CSA.

2. Screen Construction – White aluminum screen housing screen shall be tab-tensioned to prevent curl and wrinkles. Screen fabric shall be flame retardant and mildew resistant. Screen image surface shall be seamless, 1.3 gain. Image size as follows:

   a. Size: Wide format (16:10): 160 in. wide x 100 in. high with 12 in. of black drop, surface mounted on face of soffit.

   b. Case Construction: Designed with ceiling mount trim to attach to bent plate bracket arms. Case shall be white powder coat finish. No closure doors required at case opening.

3. Mounting – Include all brackets, suspension members and fasteners required by job conditions.

PART 3 EXECUTION

3.01 INSTALLATION

A. Screens shall be mounted as shown in the drawings, in accordance with the approved shop drawings.

B. Wiring of electrically operated screen will be performed under SECTION 260001 -ELECTRICAL.

END OF SECTION

SECTION 116143

STAGE DRAPERY

PART 1 GENERAL

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish and install the following, as shown on the drawings and specified herein:

1. Electrically operated draw and manual (walk) stage drapery and traveler tracks at Cafeteria platform.

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be performed under the designated SECTIONS:

1. Overhead Structure: SECTION 051200-STRUCTURAL STEEL.
2. Cubical curtains at Nurse's suite: SECTION 102600-MISCELLANEOUS SPECIALTIES.
3. Gymnasium divider curtain: SECTION 116600-ATHLETIC AND SPORTS EQUIPMENT.
4. Power for draw curtains: SECTION 260001-ELECTRICAL

1.04 SUBMITTALS

A. Submit the following in accordance with the provisions of SECTION 013300 – SUBMITTALS:

1. Bill of Materials: Bidders shall supply a complete bill of materials with their bids, clearly indicating the equipment the bidder shall furnish, including quantities, sizes, manufacturers' sample cards for fabric, cut sheets for track, and installation drawings. Colors and fabric shall be approved by the owner before fabrication or installation, as noted to describe the work.
2. Drawings: Submit component drawings and cut sheets, project specific installation drawings, and schedules showing all information necessary to explain the design features, appearance, function, fabrication, installation, and use of system components. This submission shall also include a copy of the bill of material listed above. They shall be approved by the Architect before beginning any fabrication, installation, or erection.

PART 2 PRODUCTS

2.01 GENERAL

A. Refer to Drawings for locations and sizes of openings at curtains.

2.02 MANUFACTURE

A. To establish a standard of quality, construction and design, specifications are based on curtains manufactured by KM and tracks manufactured by H&H.

B. Similar curtains and tracks by other manufacturers will be considered for approval by the Architect, upon receipt of adequate supporting data and samples.

C. Stage Curtain Scope:

1. Main Stage Curtain: Electrically operated, independent draw curtains manufactured by KM, Majestic Velour, color as selected by Architect from full range, complete with H & H 500 heavy duty cord operated track. Main curtain shall be visible through exterior windows and shall have velour fabric on both sides. Curtain machines shall be H & H Model 462 or equal, top mounted motors. Controls shall be synchronized to same speed of opening. Provide controls allowing for various curtain set up configurations. Curtains shall be controlled from the same location allowing simultaneous operation.
2. Rear Stage Curtain: Bi-parting walk curtain, manufactured by KM, Majestic Velour, color as selected by Architect from full range, complete with H&H 500 track.

D. All curtains to be manufactured with 50% fullness to form box pleats 12 in. on center. Heavy-duty jute webbing shall be double stitched into the header to accept grommets and S hooks for fastening to the curtain tracks. Bottom hem shall contain #10 jack chain, sewn in to a separate interior hem pocket that shall ride 2 in. above the finished curtain. All side hems and leading edges to be 12 in.

E. For all soft goods, provide a Certificate of Flame Resistance. Tag each piece with a permanent label providing flame retardancy information. Strictly comply with the manufacturer's instructions and recommendations except where more restrictive requirements are specified in this section.

PART 3 EXECUTION

3.01 INSTALLATION

A. Deliver materials and products in unopened factory packages. Store and handle all materials in strict compliance with manufacturer's instructions and recommendations. Protect all materials from damage. Sequence deliveries to avoid delays, but minimize on-site storage.

B The Drapery Subcontractor shall be responsible for storage of stage equipment, tools, and equipment during the period of the installation.

C. All specified equipment and drapery shall be installed by fully trained superintendents and workmen who are fully responsible to, and fully represent the stage drapery company.

D. Equipment shall be installed in a workman like manner, per plans, specifications and approved shop drawings.

E. Equipment shall be aligned, adjusted, and trimmed for the most efficient operation, the greatest safety and for the best visual appearance.

F. Installation practices shall be in accordance with OSHA safety and health standards and all local codes.

G. All operating parts shall be adjusted to work easily, smoothly and correctly.

H. All curtain panels should be clean and free of dust, lint, threads and dirt upon final installation and inspection by the owner.

3.02 CLEAN UP

A. The Drapery Subcontractor shall be responsible for clean-up, including removal of packing materials and the protection of surfaces or equipment provided by other contractors.

END OF SECTION

SECTION 116600

ATHLETIC AND SPORTS EQUIPMENT

PART 1 GENERAL

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish and install the following items required to complete the work of this SECTION as shown on the drawings and specified herein:

1. Full and Side Court Backstops – Ceiling mounted, front braced, forward folding basketball backstops with backboard, goal, height adjuster feature, electronic winch, and all necessary hardware and components for a complete installation.
2. Gym divider curtains, electric fold up operation.
3. Volleyball standard systems.
4. Wall pads.
5. Traverse climbing wall with floor mats and mounting accessories.
6. Folding bleachers, manual operation, complete with accessories.
7. Refer to structural drawings for roof framing and furnish and install all supplemental members required to install ceiling and wall hung athletic equipment. **Structural calculations prepared by a Massachusetts registered structural engineer for all specified equipment hung from or supported by the building structure**.

B. LEEDv4-S Requirements:

1. The work of this section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEEDv4-S Certification at “Silver” Level is an Owner Requirement that is critical to secure project funding from the Massachusetts School Building Authority. LEEDv4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.
2. For all paints and coatings, meet the requirements for IEQ Credit 2, Low-Emitting Materials and as defined in SECTION 018113 - SUSTAINABLE DESIGN REQUIREMENTS.

3. For all composite wood and agrifiber products installed inside the weatherproofing, meet the requirements for IEQ Credit 2 as defined in SECTION 018113 - SUSTAINABLE DESIGN REQUIREMENTS.

4. Meet the LEEDv4-S requirements for MR Credit 2, Building Product Disclosure and Optimization – Environmental Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers' product documentation for each product having an Environmental Product Declaration (EPD).

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be performed under the designated SECTIONS:

1. Slab on deck subfloor and athletic flooring systems at recessed volleyball equipment: SECTION 033000 - CAST-IN-PLACE CONCRETE, SECTION 096566 – WOOD AND ATHLETIC FLOORING.

2. Wall and partition construction at wall mounted athletic equipment: SECTION 040001-MASONRY, SECTION 092116-GYPSUM WALLBOARD, and SECTION 098400-ACOUSTICAL WALL TREATMENT.

3. Overhead structure at ceiling supported equipment: SECTION 051200-STRUCTURAL STEEL.

4. Concealed wood blocking at wall mounted athletic equipment: SECTION 061000-ROUGH CARPENTRY.

5. Power for backstops and curtains: SECTION 260001-ELECTRICAL.

6. Electronic gymnasium scoreboard and shot clocks and associated consoles and accessories: SECTION 260001-ELECTRICAL.

1.04 SUBMITTALS

A. Submit complete shop drawings in accordance with the provisions of SECTION 013300-SUBMITTALS.

B. Shop drawings shall include manufacturers specifications, and large scaled details of connection of equipment specified herein with adjacent construction accurately drawn with all pertinent dimensions provided. Include with shop drawings flame spread test results prepared by independent testing laboratory for wall padding and divider curtain.

1. Submit all structural calculations prepared by a Massachusetts registered **structural** engineer for all items proposed to be hung or supported by the building structure.

C. Submit the following samples in accordance with requirements of SECTION 013300-SUBMITTALS.

1. Mesh and solid divider curtain samples – 12 inches x 12 inches each type.
2. Color samples of divider curtains and wall pads, for full range of available colors, for selection by Architect.
3. Samples of plastic seat material for bleathers.

D. LEEDv4-S Submittals (Refer to SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS):

1. Relevant supporting documentation required by LEED for Schools v4 and as detailed in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
2. A completed LEED MATERIALS REPORTING FORM, per Section 018113-Sustainable Design Requirements.
3. Product substitution requests are subject to additional LEEDv4-S submittal requirements. Refer to SECTION 012500-SUBSTITUTION PROCEDURES.

1.05 QUALITY ASSURANCE

A. Source limitation: All components including suspension system, frame assembly, backboards, goals, electric winches, and controls for backstops shell be of a single manufacturer.

B. All welding to be performed by personnel having passed Welder Qualification testing in accordance with American Welding Society (AWS) code D1.1 or higher. Manufacturer to provide certification and test results upon request.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Provide volleyball floor sleeves, covers and floor inserts in accordance with requirements of related trades that are responsible for installation. Do not deliver balance of athletic equipment until building is enclosed and other construction within gymnasium is substantially complete.

1.07 WARRANTY

A. All Basketball Backstop support structures including clamps, fittings and tube to have a minimum warranty of 25 years from date of substantial installation. Warranty for other items to be as indicated in product specifications.

PART 2 PRODUCTS

2.00 LEEDv4-S REQUIREMENTS

A. Products and materials used for this section of the work are required to meet the following criteria for LEEDv4-S materials Credits, and a completed LEEDv4 Materials Reporting Form shall be submitted for all materials in this SECTION:

1. Furnish any composite wood and agrifiber products such that they meet the formaldehyde emissions requirements for CARB ATCM for ultra-low-emitting formaldehyde (ULEF) or no-added formaldehyde (NAF) resins. Laminating adhesives used to fabricate on-site and shop applied composite wood and agrifiber assemblies must also meet this requirement. Refer to the requirements for IEQ Credit 2 as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

2. Furnish ceiling and wall systems, including gypsum board products, insulation products, acoustical ceiling systems and wall coverings installed in the building interior (e.g., tackable surfaces), such that they meet the requirements for IEQ Credit 2 as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

2.01 MANUFACTURE – BASKETBALL BACKSTOPS, GYM DIVIDER CURTAINS, VOLLEYBALL EQUIPMENT AND WALL PADDING

A. To establish a standard of quality, design and function, drawings and specifications are based on athletic equipment by Jaypro Sports, LLC, Waterford, CT. Similar equipment by Porter Athletic Equipment, Draper and other manufacturers will be considered for approval by the Architect upon receipt of adequate supporting data.

2.02 FULL AND SIDE COURT BACKSTOPS WITH GLASS BACKBOARDS (6 REQUIRED)

A. Jaypro Model 849-FFFB ceiling mount, front braced, forward folding backstops as follows:

1. Ceiling Suspended Backstop shall be a welded together main frame constructed from steel mechanical tubing to form a rigid tetrahedral "T" design of back-to-back right triangles. The main stem shall be 6 inch OD 11-ga. steel tubing, the top of the "T" shall be 4 inch OD 11-ga. steel tubing and the side braces shall be 2-1/4 inch OD 14-ga. steel tubing. Side braces shall join stem no higher than 4 feet 6 inch above goal (18 inch above top of backboard). The main stem shall be long enough to allow ± 6-inch height adjustment of either fan or rectangular banks. The folding front brace shall be jackknife type, fully adjustable, self-locking in the down position and constructed of 2-1/2-inch OD 13-gauge (outer) steel tubing and 2-1/4 inch OD 14-gauge (inner) steel tubing.

2. Pivot or hinge joint for folding of backstop shall not exceed 15 inches from roof structure except when required by architectural conditions for coordination with other trades or equipment. Pivot or hinge point to be designed in a manner to provide a minimum structural capacity of 25,000 Lbs. and a safety factor of 55:1. The main backstop frame shall pivot on 1-1/4-inch minimum solid steel shaft secured in a milled bearing hole in ½-inch minimum steel plate hangers to insure accurate positioning of bank.

3. Bank attached to the 6-inch OD main stem by heavy-duty bank hangers. Hangers constructed of 1-inch x 2 inch 11-ga. steel tubing and formed ¼-inch steel plate with slotted holes for lateral adjustment. All banks shall have one upper bank hanger and include a goal brace, which attaches directly to the goal mounting plate and directly to the 6inch main stem of the backstop to eliminate any strain on the bank and help prevent glass breakage. This direct mount feature shall conform to NCAA recommendation No. 5-F.

4. Backstop shall be supported from 4 inch OD 11-ga. steel mechanical tubing anchored to roof structure by means of heavy steel support hangers. Attachment to building structure to be with clamps capable of supporting a minimum of 20,000 Lbs. each. Superstructure shall be designed with a minimum of four attachment clamps to produce a combined minimum attachment point safety factor of 75 to 1 and manufacture must be able to present independent testing data to substantiate safety factor. Superstructure tubes shall be reinforced with bridging and/or bracing when truss centers exceed 10 feet.

5. Finish: All metal parts shall have a gloss white powder coat finish.

2.03 BACKBOARDS, GOALS AND RELATED ACCESSORIES

A. Backboards – Provide backboard Model 503136 rectangular backboard 72 inches x 42 inches) tempered plate glass cushioned with shock absorbing vinyl gasket. Constructed of high strength clear anodized aluminum channel outer frame with engineered lower reinforced steel member. Standard white borders and target area shall be fired permanently into the glass. Provide Limited Lifetime Warranty against breakage. Backboard shall have MBBP-6 Bolt-on Safety Padding installed according to manufacturer's specifications.

1. ½-inch thick, fully tempered glass section with uniform load and impact strength. Official white border and target area is permanently fired into front side of glass section so that it cannot wear away.

2. Goal mount structure provided with two holes (7/16 inch) and two studs (3/8 inch-16) to secure backboard and goal to a direct mount "goal brace" feature which relieves all stress and shock on the backboard conforming to the latest NCAA Rules (BR-73, D-5). Goal mounting holes (4) to be standard 5 inch (horizontal) x 4 inch (vertical) mounting centers.

3. Backboard shall be covered by a Lifetime Limited Warranty when installed on a Jaypro basketball backstop with Goal Brace or Direct Mount Height Adjuster.

B. Backboard Safety Padding – Backboard Edge Padding shall be the Jaypro 5032XX. Provide pre-molded square corners. Padding shall meet or exceed all NCAA and High School Federation specifications.

C. Goals – Goal shall be the Jaypro Model 503576. Goal shall be designed to withstand shock loads. The rim shall deflect down when a static load of 230 pounds is applied. The rim shall return to the playing position once the load is removed.

1. Rim shall be fabricated from a 5/8-inch diameter steel rod formed into an 18 inch inside diameter ring. Inside of ring shall be positioned 6-inch from the face of backboard by a heavy-duty mounting plate with mounting holes centered to match 5 inches x 5 inches or 5 inch x 4 inch backboard mounting holes.

D. Controls – Flush wall mounted dual key switches shall be furnished complete with a stainless-steel cover plate. For safety, key switch to be located so that the operator has full view of all backstops while being operated. Switch shall be identical to that used for gym divider curtain. Wiring of all electrical components shall be in accordance with local codes and in accordance with manufacturer's instructions. All conduit, wiring, junction boxes and components not specified herein shall be furnished and installed by the electrical subcontractor.

E. Height Adjuster – 8 feet to 10 feet Height Adjuster shall be the Jaypro Model 503092 mount manual height adjuster with gloss white powder coat finish.

F. Safety Straps – Safety Strap shall be the Jaypro Model 503029.

1. Posilok safety strap shall be directly speed sensitive to automatically lock a basketball backstop in position at any time whether in storage or during the raising/lowering cycle. In the event of an over-speed situation caused by a malfunction of the hoisting apparatus, such as winch, cable, pulley, support fitting problems and similar issues, any increase in cycle speed or tension, whether sudden or gradual, immediately activates the locking device. The locking mechanism shall react to the actual speed of the reel and prevent it from exceeding a strap speed of 1.5 feet per second.

2. The Posilok shall incorporate a 2 in. wide belt rated at 7,300 lbs., maximum breaking strength. The entire unit must be capable of withstanding a test using a 1,750 lb. falling weight, without strap failure or structural damage. The locking mechanism must be fail-safe, so that any sticking, jamming or breakage of any of the components of the arresting mechanism results in immediate, positive locking of the reel. The locking mechanism to be self-checking and shall actively and positively confirm, six times per revolution, that the reel is traveling at a safe speed.

3. The strap shall extend a maximum of 38 feet and shall have a safety alert patch stitched to the strap to indicate the maximum safe extension. The strap shall also incorporate a breakaway loop stitched into its lower end to indicate if the unit has been subjected to a heavy load. A bright colored warning label will be exposed if the loop stitching has been broken.

4. The strap shall be automatically retracted and stored on a reel equipped with a special negator type constant force spring. The strap anchoring system must bear on the full width of the strap and be capable of taking the full breaking strength of the strap. The unit shall incorporate a fully automatic reset requiring no poles, ropes, levers or buttons to be used. The unit shall have an interlocking all-steel frame for strength and be powder coated for corrosion resistance and a modern, aesthetically pleasing appearance.

2.04 GYM DIVIDER CURTAIN

A. Roll-up curtain, Jaypro SC-680 Fold up Curtain, as follows:

1. Curtain shall be 51 ft.-3 in. wide by approximately 24 ft. high and shall be in one continuous section. When fully raised, the lowest portion of the curtain shall be at or above the level of the bottom of trusses – approximately 23 ft.-3 in. – above finish floor at the main basketball court, refer to the Drawings. Curtain manufacturer shall be the same as the basketball backstops to assure similar operation, safety, routine maintenance and service.

2. Gym Divider curtain shall be designed to fold compactly to the contour of the roof structure in order to allow maximum clearance for basketball or volleyball courts.

3. Curtain shall be hoisted by 1/8 in. dia. vandal proof, galvanized aircraft cable 2,100 lb. breaking strength each cable, spacing not to exceed 12 ft.-0 in.) passing thru D-ring type cable guides secured to the solid and mesh sections of the divider on approximate 18 in. centers. Bottom end of cables to terminate around 1-5/8 in. O.D. tube in bottom pocket and hinged in middle to form to roof contour in up position. Hinge to have torsion spring to assist bottom tube to lay flat in down position. Each end of bottom pocket shall be weighted for proper curtain operation.

4. Each hoist cable shall terminate in individual hoist spools on remote electric operator. Each hoist drum shall be sized with a variable diameter ratio system to allow divider curtain to raise and store into sloped ceilings, peaked or arched structure to conform to existing building conditions to all maximum clearance for all sports.

5. Hoist system shall be powered by means of a heavy duty 3/4 H.P., 115 V., single phase reversible capacitor start motor furnished with automatic overload protection.

6. Flush wall mounted dual key switch shall be furnished complete with a stainless steel cover plate. For safety, key switch to be located so that the operator has full view of the curtain while being operated. Switch shall be identical to that used for the basketball backstops. Wiring of all electrical components shall be in accordance with local codes and in accordance with manufacturer's instructions. All conduit, wiring, junction boxes and components not specified herein shall be furnished and installed by the electrical contractor.

7. Upper net section shall be designed for air breathing and light transfer. Net material to be an open polyester raschel knit with an approximate 80% open area. Color: To be selected by the Architect from manufactures standard colors. Materials shall be fire retardant (NFPA-701). Lower section of curtain shall be 8 ft.-0 in. high solid vinyl, polyester reinforced fabric 18 oz. per square yard containing anti-bacterial and flame retardant chemicals and shall meet NFPA-701 large and small scale test requirements. Color to be selected by Architect from manufacturers standard swatches. Curtain material shall be electronically welded. All hems and pockets on curtain shall be double needle lock stitched seams.

8. All metal components shall have gloss white powder coat finish.

9. Refer to drawings for locations of divider curtains and for roof structure for attachment conditions. Furnish and install all supplemental framing required to support curtains.

2.05 VOLLEYBALL EQUIPMENT

A. Rollaway System – Jaypro PVBC-270 Second Floor Competition Net Center Package (Infinite):

1. Standards shall be telescoping type that does not exceed above the net and impede the official's vision. Standards shall be constructed of 3-1/2 inch diameter 6063T6 type aluminum extrusion and finished with plastic molded foot to protect against gym floor damage. Upper end of the standard shall be equipped with an integral 2-1/3 inch diameter steel pulley to reduce cable drag and unnecessary tension. Upper telescoping portion of the standard shall be micro-adjustable for net heights from 6 feet-1 inch to 7 feet-11-5/8 inch by means of integral winch with removable handle.

2. Standards shall be equipped with a tensioning winch self-locking ratchet mechanism with a compression, disc-brake type release mechanism to eliminate the danger of suddenly released cable tension when removing a net. Standards shall include height-markings for ease in set-up. This system shall meet USAV, NCAA, NFSHSA and NAGWS requirements.

3. Net shall be 32 feet x 39 inch Jaypro PVBN-6 Flex Net International with heavy duty woven nylon top and bottom bands.

4. Furnish for one volleyball court.

2.06 WALL PADDING

A. JayPro plywood backed pads for interior use for application to masonry walls using “Z” clip attachment. Pads shall be installed on all wall surfaces in gym, as shown on the drawings. Provide custom dimensions shown on drawings.

1. Vinyl Cover: 14 oz. Vinyl with leather grain appearance, anti-fungal, Class A Fire Rated as a complete assembly Tear strength 92 x 83, strip tensile strength 365 x 348. Cover shall be wrapped around the backside of the plywood and stapled every 3 inches with galvanized steel staples. Color as selected by the Architect

2. Plywood: 7/16 in.: OSB (Oriented Strand Board), exterior exposure durability rating.

3. Attachment: One Pair of 18 ga. metal “Z” Clips are used to mount the pads to the wall at the top and 1-inch nailing margins at the bottom. “Z” Clips are mounted by ¼-inch bolts screwed into threaded washer inserts. The wall “Z” Clips are fastened with an appropriate anchor (provided by installer) for each wall type.

4. Foam Core: Glued to the plywood backing 2-inch prime polyurethane foam 10

2.07 TRAVERSE CLIMBING WALL SYSTEM

A. Manufacturer – To establish a standard of quality, design and function, Drawings and Specifications are based on traverse climbing wall system “Ultraverse” as manufactured by Gopher Sport, Owatonna, MN. Similar traverse climbing wall systems by Everlast Climbing, Minneapolis, MN, Entre-prises, Bend, OR and other manufacturers will be considered for approval by the Architect upon receipt of adequate supporting data.

B. Traverse Climbing Wall System – Traverse climbing wall system shall consist of the following:

1. One 20 ft. long by 8 ft. high and one 8 ft. x 4 ft. high installation made up of neoprene covered panels measuring 4 ft. wide by 8 ft. high. Each panel shall accommodate a variety of positions with fifty (50) t-nuts, pre-installed. Panels shall be predrilled to mount to gym masonry wall, including all mounting anchors and bolts hardware.

2. Floor Mats – Provide five floor mats measuring 6 ft. long by 4 ft. wide for the full length of the 20-foot climbing wall at the gymnasium and four (4) floor mats measuring 6 ft. long x 4 ft. wide at PT Room 155.

2.08 FOLDING BLEACHERS

A. To establish a standard of quality, design and function, drawings and specifications are based upon Maxam 26 with Courtside XC10 seat module manually operated folding bleachers by Hussey Seating Co., North Berwick, ME. Similar equipment by Irwin Seating Co., Interkal Polaris, CSM or other manufacturers will be considered for approval by the Architect, upon receipt of adequate supporting data.

1. Type: Manually operated telescoping bleachers.

B. Bleacher Components:

1. Enclosed deck.
2. Plastic Bleacher Seats – Bleacher seats shall be curved on the forward edge, 18 in. long (side to side) and 10 in. deep (front to back).
3. Accessible seating positions per Massachusetts's Architectural Access Board and ADA requirements. Accessible seats shall be recoverable with "Flex-row" or equal.
4. Handrails and Guardrails: Powder coated steel

C. Description:

1. The bleacher system shall be comprised of tiered, closed deck seating rows.
2. Bleachers shall be operable on the telescopic principle, stacking vertically in minimum floor area when not in use.
3. Each bleacher row shall be comprised of risers and seat components, and a complete set of supportive columns and braces.
4. The first moving row shall be secured by both mechanical and key locks. All other rows shall be mechanically locked, operable only upon unlocking and releasing the first row.

D. Wall Attached, Front Access Bleacher Units

1. Seating Area – Two banks, nominal 16 ft.-6 in. long banks, three rows high, wall attached, manually operated. Manual operation: User operates system by manually pulling / pushing each bank with operating handles.
2. Nominal Dimensions – Overall height: 3 ft.-1 in., open depth: 5 ft.-3 in. (6 ft.-2 in. including front step), closed depth: 3 ft.-5 in.
3. Row Spacing – 24 inches. Row rise: 9-5/8 inches.
4. Aisle Width – 3 ft.

5. Accessories:

   a. End Rails (where required): Self storing type, at the open ends of each group.

   b. End panels and extended rear deck walkway.

E. Design Criteria

1. Folding and telescopic seating shall be designed to support, in addition to its own weight, and the weight of added accessories, a uniformly distributed live load of not less than 100 lbs. per sq. ft. (488 kg. per sq. m.) of gross horizontal projection.

   a. Seat boards and footrest shall be designed for a live load of not less than 120 lbs. per linear foot (179 kg. per linear m).

   b. A sway force applied to seats shall be 24 lbs. per linear ft. (36 kg. per linear m.) parallel to the seats and 10 lbs. per linear ft. (15 kg. per linear m.) perpendicular to the seats. Sway forces shall not be considered simultaneously applied.

   c. Static point load (bleachers loaded with spectators) shall be no greater than 200 psi. Rolling load shall be no greater that 337 psi. Compliance with these load requirements shall be in the form of a certified engineers report.

2. Railings, posts and sockets designed to withstand the following forces applied separately:

   a. Handrails shall be designed and constructed for

      - A concentrated load of 200 lbs. (91 kg.) applied at any point and in any direction

      - A uniform load of 50 lbs. per ft. (74 kg/m) applied in any direction. The concentrated and uniform loading conditions shall not be required to be applied simultaneously. The concentrated and uniform loading conditions shall not be required to be applied simultaneously

   b. Guards shall be designed and constructed for:

      - A concentrated load of 200 lbs. per ft. (91 kg/m) applied at any point and in any direction along the top railing member and

      - A uniform load of 50 lbs. per ft. (74 kg/m) applied horizontally at the required guardrail height and simultaneous uniform load of 100 lbs. per ft. (149 kg/m) applied vertically downward at the top of the guardrail. The concentrated and uniform loading conditions shall not be required to be applied simultaneously.

3. American Institute of Steel Construction (AISC), American Iron and Steel Institute (AISI) and Aluminum Association (AA) design criteria shall be the basis for calculation of member sizes and connections.

F. Accessories

1. Aisles shall be footrest level. Aisle covers shall be steel and extend down to provide automatic closure panels to eliminate the "ladder effect" when the gym seats are closed. Aisles at the footrest level shall have non-slip treads on the top front edge.

2. End panels of plywood and supports shall be provided to enclose the open ends of the group in the closed position. End panels shall enclose the space between the wall and the back of the self-storing end rails. Finish to match deck panels.

3. End rails, if required, of the self-storing type, finished with textured epoxy powder-coated enamel, color to be selected by the architect from manufacturer's full line of standard colors, shall be provided at the open ends of the group. Rails shall meet all national building codes. End rails shall start at row two.

4. Rear filler panels located at the deck level used to close openings between top row and wall. Closure panel to match panelam deck surface.

5. Handicap seating areas shall be supplied according to codes that apply. Front rails and closure panels shall be provided behind these areas if required by system. Basis of design does not require rails.

6. Intermediate aisle steps shall be provided. Steps are permanently attached closed design. Steps shall be designed to eliminate any possible toe catch between the top of the intermediate step and the bottom of the nose beam per ADA or other applicable codes. Front step shall be hinged for storage on first row deck without the need for removal. Walking surface to match deck panels. Provide non-slip tread identification strip on leading edge of all stair nosing.

7. Aisle Handrails – Non-Removable folding aisle handrails shall be provided. Aisle railings shall be permanently attached to the mounting pocket and allow railings to pivot and fold within the deck without the need for removal. Aisle railing shall be an individual rail design, located on every other row starting at row two (2). Railing to be constructed of 1-1/2 in. 11 ga. round steel tubing, finished in a textured powder coated epoxy. Color will be selected by the Architect from manufacturer's full line of standard colors. Aisle rails that require removal, rails made of square tubing or rails systems spanning several rows will not be acceptable. For safety, rail pockets that protrude beyond the face of the bleacher while in the closed position shall not be allowed.

G. Fabrication

1. Understructure System:

   a. Steel supports and rolling frames shall be constructed of formed steel shapes of the size and shape necessary to support the design loads. All support bracing shall begin at Row 2 and be of diagonal “slant” or "knee" type for rigidity. Diagonal bracing to be a "U" shaped formed steel channel. Angle iron or "X" type bracing is unacceptable. Finish shall be rust-inhibiting black finish.

   b. Wheels shall not be less than 4" diameter x 1" non-marring soft rubber face to protect wood or synthetic floor surfaces. Each operating row shall have a minimum of 8 wheels.

   c. Provide lower frame interlocking to provide frame reliability.

   d. Each fully skirted wheel channel shall be continuously in contact with adjacent channels by nylon guides. Eliminate metal to metal contact. Non-binding guide rods to provide alignment when opening and closing. Lubrication shall not be required either at time of installation or periodically.

   e. Each cantilever arm shall be securely welded to the post assembly and contain non-binding interlocks with each row post assembly. Lubrication shall not be required either at time of installation or periodically.

   f. Columns and other supports shall be high tensile steel structural tube to meet design criteria.

   g. Deck stiffeners shall be bolted to both the rear beam and the nose with locking hardware.

2. Deck system:

   a. Lower rear riser shall be a continuous formed steel member recessed to provide full heel room and provide a continuous envelope for the deck and longitudinal support of the deck surface.

   b. Front nose beam to be a continuous structural member to support design loads and provide continuous longitudinal support of the deck surface.

   c. Panelam decking shall have a 0.030 (30 thousandths) high density polyethylene overlay, permanently bonded to structural western fir plywood in strict compliance with U.S. Product Standard PS 195. Finished thickness to be 5/8". Polyethylene finish to be textured grey or beige. Plywood shall be supported along the front and back edge for maximum rigidity. An "H" type aluminum splice beam shall be provided between all decks. Plywood with clear or painted finish is unacceptable.

d. Decking shall be through bolted to steel supports with locking hardware. Decking attached by the use of self-tapping fasteners is unacceptable.

3. Polymer Seat System:

   a. Plastic seat shall be provided in a monochromatic color, injection molded high density, 100% recyclable HDPE, 10 inches deep seat surface with ½ inch minimum interlock on seat and face. Tested to 600 lbs. occupant load.

   b. Module Size: 18 in. long x 10 in. deep.

   c. Seat height from deck to top of seat: Nominal 16 in.

   d. Color: As selected by the Architect from full range of manufacturer's standard colors.

   e. Integrally molded end caps, aisles and rear closure panel at back of seat to facilitate deck sweeping.

4. ADA Accessible Seating: Provide wheelchair accessible seating at locations indicated on the Drawings, or a minimum of one per bank of bleachers.

   a. Provide first row modular recoverable seating units that can be closed to accommodate persons requiring ADA spaces (Hussey "Flex-Row" or equal). Each Flex-Row unit shall have a handle for operation.

   b. Provide signage to mark the location of each recoverable Flex-Row module.

5. Finish

   a. For rust resistance in standard conditions all painted surfaces shall be finished in textured epoxy powder coated Semi-Gloss Black.

   b. Steel rear riser, steel nose and diagonal knee bracing shall be pre-galvanized with a minimum of G-90 zinc plating.

   c. Panel at decking shall have a textured polyethylene grey or beige finish.

PART 3 EXECUTION

3.01 GENERAL

A. Install equipment specified herein in accordance with approved shop drawings, and manufacturer's recommendations.

B. Cooperate fully with General Contractor and respective subcontractors to ensure that required back-up work is in place for mounting and installation of athletic equipment.

END OF SECTION

Division 12
Furnishings

SECTION 122413

ROLLER SHADES

PART 1 GENERAL

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish and install the following, as shown on the drawings and specified herein:

1. Roller shades for manual operation at all windows in classrooms, offices, and as otherwise scheduled herein. Roller shades at interior borrowed lites in hollow metal and curtainwall frames.
2. Roller shades for electronic operation in Cafeteria and Media Center.
3. Spring roller shades at interior door lites as noted herein.

B. LEED v4-S Requirements:

1. The work of this section includes material and submittal requirements for fulfillment of Project LEEDv4-s Certification. LEEDv4-S Certification at “Silver” Level is an Owner requirement that is critical to secure project funding from the Massachusetts School Building Authority. LEEDv4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be performed under the designated Sections:

1. Wood blocking and grounds for mounting roller shades and accessories SECTION 061000-ROUGH CARPENTRY.
2. Electrical power for electronic operating shades: SECTION 260001-ELECTRICAL.
3. Acoustic tile and grid at ceiling pocket box: SECTION 090003-ACOUSTICAL TILE.
4. Hollow metal door and borrowed lite frames: SECTION 081113-HOLLOW METALWORK

5. Aluminum windows, storefront and curtainwall: SECTION 080001-METAL WINDOWS

1.04 SUBMITTALS

A. Submit the following in accordance with the requirements of SECTION 013300 - SUBMITTALS.

B. Product Data: For each type of product indicated. Include styles, material descriptions, construction details, dimensions of individual components, electrical requirements and profiles, features, finishes, and operating instructions.

C. Shop Drawings: Show location and extent of roller shades. Include elevations, sections, details, and dimensions not shown in Product Data. Show installation details, mountings, attachments to other work, operational clearances, and relationship to adjoining work.

D. Provide tabular schedule of all shades. Schedule shall include the following information: Window / frame / door type, room number, shade type, mounting, sizes of shade (to be field verified, number of shades, control type, control position, roll orientation, fabric, notes for special mounting instructions.

E. Samples for Initial Selection: For each colored component of each type of shade indicated.

1. Include similar Samples of accessories involving color selection.

F. Samples for Verification:

1. Complete, full-size operating unit not less than 16 inches wide for each type of roller shade indicated.

2. For the following products:

a. Shade Material: Not less than 12-inch- square section of fabric, from dye lot used for the Work, with specified treatments applied. Show complete pattern repeat. Mark top and face of material.

G. Product Certificates: For each type of roller shade, signed by product manufacturer.

H. Qualification Data: For Installer.

I. Product Test Reports: For each type of roller shade.

J. Maintenance Data: For roller shades to include in maintenance manuals. Include the following:

1. Methods for maintaining roller shades and finishes.

2. Precautions about cleaning materials and methods that could be detrimental to fabrics, finishes, and performance.

3. Operating hardware.

K. LEED for Schools Submittals (Refer to SECTION 013300-SUBMITTALS)

1. Relevant supporting documentation required by LEED for Schools v4 and as detailed in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

2. A completed LEED MATERIALS REPORTING FORM, per SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

3. Product substitution requests are subject to additional LEED-S submittal requirements. Refer to SECTION 012500-SUBSTITUTION PROCEDURES.

4. Meet the LEEDv4-S requirements for MR Credit 2, Building Product Disclosure and Optimization – Environmental Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers' product documentation for each product having an Environmental Product Declaration (EPD).

1.05 QUALITY ASSURANCE

A. Installer Qualifications: Fabricator of products.

B. Source Limitations: Obtain roller shades through one source from a single manufacturer.

C. Fire-Test-Response Characteristics: Provide roller shade band materials with the fire-test-response characteristics indicated, as determined by testing identical products per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:

1. Flame-Resistance Ratings: Passes NFPA 701.

D. Electrical Components: NFPA Article 100 listed and labeled by either UL or ETL or other testing agency acceptable to authorities having jurisdiction, marked for intended use, and tested as a system. Individual testing of components will not be acceptable in lieu of system testing. Where applicable, system components shall be FCC compliant.

E. Requirements for Electronic Hardware, Controls, and Switches:

1. Roller shade hardware, shade fabric, and all related controls shall be furnished and installed as a complete system and assembly.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver shades in factory packages, marked with manufacturer and product name, fire-test-response characteristics, and location of installation using same designations indicated on Drawings and in a window treatment schedule.

1.07 PROJECT CONDITIONS

A. Environmental Limitations: Do not install roller shades until construction and wet and dirty finish work in spaces, including painting, is complete and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

B. Power and control wiring shall be complete and certified, fully operational with uninterrupted communication on the lines and minimal noise.

C. Field Measurements: Where roller shades are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings. Allow clearances for operable glazed units' operation hardware throughout the entire operating range. Notify Architect of discrepancies. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1.08 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Rollers Shades: Before installation begins, for each size, color, texture, and pattern indicated, full-size units equal to 5 percent of amount installed.

1.09 WARRANTY

A. Warranty: Provide manufacturer’s standard warranties, including the following:

1. Roller Shade Hardware, and Shade cloth: Manufacturer’s standard non-depreciating twenty-five year limited warranty.

a. EcoVeil standard non-depreciating 10-year limited warranty.

2. Electronic Roller Shade Control Systems: Manufacturer’s standard non-depreciating five-year warranty.

PART 2 PRODUCTS

2.00 LEED v4-S PRODUCT REQUIREMENTS

A. Products and materials used for this section of the work are required to meet the following criteria for LEEDv4-S materials Credits, and a completed LEEDv4-S MATERIALS REPORTING FORM shall be submitted for all materials in this SECTION:

1. Furnish any adhesives and sealants meeting the requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
2. Furnish any ceiling and wall system components, including gypsum board products, insulation, acoustical ceiling systems and wall coverings such that they meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113-SUSTIANABLE DESIGN REQUIREMENTS.

2.01 CLUTCH ROLLER SHADES

A. Manufacture: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:

1. Mecho Shade Systems, Inc.
2. Walker Specialties, Inc., Boston, MA
3. Hunter Douglas Nysan Solar Control.

B. Shade Band Material: PVC-coated fiberglass or polyester, “shearweave” style 2500 (1% openness factor) as manufactured by Phifer Wire Products, Inc. or an approved equal:

1. Pattern: Basket weave, woven into a 45 x 45 mesh
2. Colors: As selected by Architect
3. Weight: 14.26 ounces per sq. yd.
4. Material openness factor: 1% at all locations.

C. Rollers: Electro-galvanized or epoxy primed steel or extruded-aluminum tube of diameter and wall thickness required to support and fit internal components of operating system and the weight and width of shade band material without sagging; designed to be easily removable from support brackets; with removable spline fitting integral channel in tube for attaching shade material.

D. Direction of Roll: Regular, from back of roller. “Regular roll” as a default. Reverse roll as indicated on drawings confirmed in field and noted on Shop Drawings, at locations where reverse roll is required to clear hardware.

E. Mounting Brackets: Galvanized or zinc-plated steel.

F. Bottom Bar: Steel or extruded aluminum. Provide concealed, by pocket of shade material, internal type bottom bar with concealed weight bar required for smooth, properly balanced shade operation.

G. Mounting Enclosures:

1. Full-head box for use at all reverse roll wall or window frame mounted shades, head box shall fully enclose reverse roll except necessary at bottom for shade. Reverse roll shall be provided where required for shade fabric to pass freely in front of operable window hardware.
2. Ceiling pocket box: (Draper: Type D Pocket; Armstrong: Axiom Perimeter Shade Pocket, or equal) shall be extruded aluminum pocket. Box shall enclose roller with bottom closure extrusions set for regular or reverse roll necessary at given applications. Provide ceiling box as indicated in schedule herein and as shown on the Drawings. Provide matching aluminum covers at corners as shown on the Drawings to cover gaps in pocket; covers shall be mitered.
3. Fascia: Where jamb to jamb mounting is used at regular roll.
4. Head box, ceiling pocket box or fascia panel shall be installed to conceal the roller tube and mounting hardware, providing a clean, finished look. Head box, ceiling pocket box and fascia panel shall be made of approximately .062 in. extruded aluminum, painted with a high-quality baked enamel finish. Color to be selected by the Architect.
5. Mounting brackets shall support both the roller tube and must be capable of inside mounting, outside mounting or to the ceiling, or to the vertical window mullions, with the clutch on either end of the roller. All brackets shall be made of .060 in. steel, painted with a high-quality finish to match the full-head box, ceiling pocket box or fascia panel.
6. Head box and ceiling pocket shall support the roller tube.
7. Fascia shall hook onto the top of the bracket and snap in place, remaining firmly attached.

H. Hold-Down Brackets and Hooks or Pins: Manufacturer's standard for anchoring roller shade bottom in place and keeping shade band material taut.

I. Valence: Double fascia (front and back), manufacturer’s standard, color as selected by the Architect.

J. Ceiling pocket box with 3 in. closure panel for all motorized shades,

2.02 MOTORIZED CLUTCH ROLLER SHADES – CAFETERIA & MEDIA CENTER

A. General: Provide factory-assembled motorized shade operation systems designed for lifting shades of type, size, weight, construction, use and operation frequency indicated. Provide operation systems of size and capacity and with features, characteristics and accessories suitable for Project conditions and recommended by shade manufacturer, complete with electric motors and factory-prewired motor controls, remote-control stations, remote-control devices, power disconnect switches, enclosures protecting controls and all operating parts, and accessories required for reliable operation without malfunction. Include wiring from motor controls to motors. Coordinate operator wiring requirements and electrical characteristics with the building electrical system.

1. Shade manufacturer, rollers, bottom bar, mounting enclosure and shade material: as specified under Article 2.01.B.

2. Mounting enclosure at all motorized shades shall be ceiling pocket box, with custom covers at corners to cover gap in shades.

B. Comply with NFPA 70.

C. Control Equipment: Comply with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6 with NFPA 70, Class 2 control circuit, maximum 24-V ac or dc.

D. Electric Motors: UL-approved or recognized, totally enclosed, insulated motor, complying with NEMA MG 1, with thermal-overload protection, brake, permanently lubricated bearings, and limit switches; sized by shade manufacturer to start and operate size and weight of shade considering service factor or considering Project's service conditions without exceeding nameplate ratings.

1. Service Factor: According to NEMA MG 1, unless otherwise indicated.

2. Motor Characteristics: Single phase, 220 V, 60 Hz.

3. Motor Mounting: Within manufacturers standard roller enclosure.

E. Position of Motor and Electrical Connection: Right side of roller, as determined by hand of user facing shade from inside, unless otherwise indicated on Drawings.

F. Remote Controls: Electric controls with NEMA ICS 6, Type 1 enclosure for recessed mounting. Provide the following devices for remote-control activation of shades:

1. Control Stations: Keyed, maintained-contact, three-position, switch-operated control station with open, close and off functions. Provide two keys per station:

a. Color: White.

2. Group Control Stations: Maintained-contact, three-position, rocker-style, wall switch-operated control station with open, close and center off functions for single-switch group control.

3. Microprocessor Controls: Electronic programmable means for setting, changing, and adjusting control features. Provide unit isolated from voltage spikes and surges.

G. Limit Switches: Adjustable switches, interlocked with motor controls and set to automatically stop shade at fully raised and fully lowered positions.

H. Operating Function: Stop and hold shade at any position.

I. Operating Features: Include the following:

1. Group switching with integrated switch control; single face plate for multiple switch cut-outs.

2. Capable of interface with audiovisual control system.

3. Capable of accepting input from building automation control system.

4. Override switch.

5. Backup gear and crank operator for manual operation during power failures with detachable handle, length required to make operation convenient from floor level.

2.03 CLUTCH ROLLER SHADE FABRICATION

A. Product Description: Roller shade consisting of a roller, a means of supporting the roller, a flexible sheet or band of material carried by the roller, a means of attaching the material to the roller, a bottom bar, and an operating mechanism that lifts and lowers the shade.

B. Concealed Components: Non-corrodible or corrosion-resistant-coated materials.

1. Lifting Mechanism: With permanently lubricated moving parts.

C. Unit Sizes: Obtain units fabricated in sizes to fill window and other openings as follows, measured at 74 degrees F:

1. Shade Units Installed Outside Jambs: Width and length as indicated, with terminations between shades of end-to-end installations at centerlines of mullion or other defined vertical separations between openings.

D. Installation Brackets: Designed for easy removal and reinstallation of shade, for supporting fascia, roller, and operating hardware and for hardware position and shade mounting method indicated.

E. Installation Fasteners: No fewer than two fasteners per bracket, fabricated from metal noncorrosive to shade hardware and adjoining construction; type designed for securing to supporting substrate; and supporting shades and accessories under conditions of normal use.

F. Color-Coated Finish: For metal components exposed to view, apply manufacturer's standard baked finish complying with manufacturer's written instructions for surface preparation including pretreatment, application, baking, and minimum dry film thickness.

2.04 CLUTCH ROLLER SHADE COMPONENTS

A. Access and Material Requirements:

1. Provide shade hardware allowing for the removal of shade roller tube from brackets without removing hardware from opening and without requiring end or center supports to be removed.

2. Provide shade hardware that allows for removal and re-mounting of the shade bands without having to remove the shade tube, drive or operating support brackets.

B. Motorized Shade Hardware and Shade Brackets:

1. Provide shade hardware constructed of minimum 1/8-inch (3.18 mm) thick plated steel, or heavier, thicker, necessary to support 150 percent of the full weight of each shade. Plastic components without use of steel angle construction do not meet the intent of this specification and shall not be accepted.

2. Provide shade hardware system that allows for field adjustment of EDU or replacement of any operable hardware component without requiring removal of brackets, regardless of mounting position (inside, or outside mount).

C. Manual Operated Chain Drive Hardware and Brackets:

1. Provide for universal, regular and offset drive capacity, allowing drive chain to fall at front, rear or non-offset for all shade drive end brackets. Universal offset shall be adjustable for future change.

2. Provide hardware capable for installation of a removable fascia, for both regular and/or reverse roll, which shall be installed without exposed fastening devices of any kind.

3. Provide shade hardware system that allows for removable regular and/or reverse roll fascias to be mounted continuously across two or more shade bands without requiring exposed fasteners of any kind.

4. Provide shade hardware system that allows for operation of multiple shade bands (multi-banded shades) by a single chain operator, subject to manufacturer's design criteria. Connectors shall be offset to assure alignment from the first to the last shade band.

5. Provide shade hardware system that allows multi-banded manually operated shades to be capable of smooth operation when the axis is offset a maximum of 6 degrees on each side of the plane perpendicular to the radial line of the curve, for a 12 degrees total offset.

6. Provide positive mechanical engagement of drive mechanism to shade roller tube. Friction fit connectors for drive mechanism connection to shade roller tube are not acceptable.

7. Provide shade hardware constructed of minimum 1/8-inch (3.18 mm) thick plated steel or heavier as necessary to support 150 percent of the full weight of each shade.

8. Drive Bracket / Brake Assembly:

    a. MechoShade Drive Bracket model M5 shall be fully integrated with all MechoShade accessories, including, but not limited to: SnapLoc fascia, room darkening side / sill channels, center supports and connectors for multi-banded shades.

    b. M5 drive sprocket and brake assembly shall rotate and be supported on a welded 3/8 inch (9.525 mm) steel pin.

    c. The brake shall be an over running clutch design which disengages to 90 percent during the raising and lowering of a shade. The brake shall withstand a pull force of 50 lbs. (22 kg) in the stopped position.

    d. The braking mechanism shall be applied to an oil-impregnated hub on to which the brake system is mounted. The oil impregnated hub design includes an articulated brake assembly, which assures a smooth, non-jerky operation in raising and lowering the shades. The assembly shall be permanently lubricated. Products that require externally applied lubrication and or not permanently lubricated are not acceptable.

    e. The entire M5 assembly shall be fully mounted on the steel support bracket, and fully independent of the shade tube assembly, which may be removed and reinstalled without effecting the roller shade limit adjustments.

9. Drive Chain: #10 qualified stainless steel chain rated to 90 lb. (41 kg) minimum breaking strength. Nickel plate chain shall not be accepted.

2.05 SCHEDULE OF CLUTCH ROLLER SHADES

A. Furnish and install manual roller shades at all window openings, curtainwall systems and corridor sidelights adjacent to door frames. Refer to Contract Drawings for windows, curtainwall and hollow metal sidelight frame opening sizes and installation conditions:

1. Exterior windows and curtainwall:
Types A, A1, A2, A3, B, B1, C, C1, D, E, E1, F

B. Furnish and install electrically operated roller shades:

1. Curtainwall: Types CWA.1, CWA.2, CWA.3, CWC.3 (portion at Cafeteria only), CWE (portion at Cafeteria only).

2.06 SPRING ROLLER SHADES

A. Manufacture: To establish a basis of design, quality and function, drawings and specifications are based on spring roller shades by Walker Specialties. Shades by other manufacturers will be considered by the Architect as an equal upon receipt of adequate supporting data and samples.

B. Shade Cloth: High quality 12 oz. 100% polyester with acrylic backing opaque room darkening shade cloth, Sierra Sol “Tempe” by Roll Ease or approved equal, as follows:

1. Cloth shall show no streaks and no evidence of bleeding.
2. There shall be no evidence of holes, cracking or breaking.
3. Material shall be washable and non-tearable.
4. Breaking Strength: 160 x 140 lb.
5. Thread Count: 64 threads per square inch.
6. The finish length of each single hung shade after hemming should be 12” longer than the portion of the sash covered by the shade.
7. The finish width of shades shall be 2 in. wider than the sash width. Sash width as determined by glazing width plus stops.

C. Rollers: All shades to be mounted on 1-¼ in. wood rollers with springs; suitable for shade size and meeting Fed. Standards.

D. Hem Bar: Bottom hem bar shall be 1-¼ in. straight grained pine with stainless steel eyelet and rayon pull.

E. Brackets: Brackets shall be heavy duty cadmium plated steel. Suitable size and type to fit based on the size of the shades. Bracket is capable of mounting into head, side or back of windows.

F. Fascia: Furnish and install fascia and fascia end cap covers for concealed appearance. Fascia color as selected by Architect.

2.07 SCHEDULE OF SPRING ROLLER SHADES

A. Furnish and install spring roller shades in the following interior hollow metal borrowed lites openings. Refer to Contract Documents for quantities, window opening sizes and installation conditions:

B. Interior Borrowed Lites:

1. Interior borrowed lites at hollow metal and wood frames:
Frame Types 3, 3A, 4, 4A, 5, 5A, 6, 6A
(Note: No shade required at transom lites).

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, operational clearances, accurate locations of connections to building electrical system, and other conditions affecting performance.

1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 ROLLER SHADE AND SPRING ROLLER SHADE INSTALLATION

A. Install shades level, plumb, and aligned with adjacent units according to manufacturer's written instructions, and located so shade band is not closer than 2 inches to interior face of glass. Allow clearances for window operation hardware.

3.03 ADJUSTING

A. Adjust and balance roller shades to operate smoothly, easily, safely, and free from binding or malfunction throughout entire operational range.

3.04 CLEANING AND PROTECTION

A. Clean roller shade surfaces after installation, according to manufacturer's written instructions.

B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer that ensure that roller shades are without damage or deterioration at time of Substantial Completion.

C. Replace damaged roller shades that cannot be repaired, in a manner approved by the Architect, before time of Substantial Completion.

3.05 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner’s maintenance personnel to adjust, operate, and maintain roller shades. Refer to SECTION 017700-PROJECT CLOSEOUT.

END OF SECTION

SECTION 124813

MATS

PART 1 GENERAL

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Furnish and install the following, as shown on the drawings and specified herein:

1. Entrance grilles and related accessories.
2. Mats and related accessories.

B. Prepare new surfaces to properly receive the materials to be furnished and installed hereunder. Include sanding, cleaning, and installing mastic underlayment, as necessary, to ensure the specified level of tolerance and bonding of tile and base.

C. Test moisture content/relative humidity (RH) and alkalinity (pH) level of concrete slabs to receive finishes specified herein.

D. Furnish and install adhesives complying with minimum relative humidity of 99% and a level of alkalinity (pH) not less 7 nor greater than 11.

E. LEEDv4-S Requirements:

1. The work of this section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEEDv4-S Certification at “Silver” Level is an Owner Requirement that is critical to secure project funding from the Massachusetts School Building Authority. LEEDv4-S requirements for the work of this Section are detailed herein, and additionally in DIVISION 1 of this Project Manual.
2. For all adhesives and sealants, meet the requirements for IEQ Credit 2, Low-Emitting Materials and as defined in Section 018113 - SUSTAINABLE DESIGN REQUIREMENTS.
3. For all flooring systems, meet the requirements for IEQ Credit 2, Low-Emitting Materials and as defined in Subparagraph 2.04 of Section 018113-SUSTAINABLE DESIGN REQUIREMENTS.

4. Meet the LEEDv4-S requirements for MR Credit 2, Building Product Disclosure and Optimization – Environmental Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers' product documentation for each product having an Environmental Product Declaration (EPD).

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be performed under the designated SECTIONS:

1. Recesses for mats and grilles, where shown on the drawings: SECTION 033000-CAST-IN-PLACE CONCRETE.
2. Adjacent floor finishes: SECTION 090005-RESILIENT FLOORING and SECTION 096816-CARPETING.
3. Moisture mitigation for resilient flooring and carpeting: SECTION 090005 - RESILIENT FLOORING and SECTION 096816 - CARPETING, respectively.
4. New concrete slabs including floor leveling to comply with specified floor flatness and floor levelness criteria: SECTION 033000-CAST-IN-PLACE CONCRETE.

1.04 SUBMITTALS

A. Submit complete shop drawings in accordance with the provisions of SECTION 013300-SUBMITTALS.

B. Show dimensions and details of mats and grilles, indicating installation details showing proposed anchorage to surrounding materials.

C. Submit product and color samples of entrance mat, grilles and edging.

D. Qualifications:

1. The Flooring Subcontractor shall have a master mechanic or associate mechanic on his staff. As part of the submittal process, submit master mechanic or associate mechanics credentials.

E. LEED for Schools Submittals (Refer to SECTION 013300-SUBMITTALS):

1. Relevant supporting documentation required by LEED for Schools v4 and as detailed in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
2. A completed LEED MATERIALS REPORTING FORM, per SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.
3. Product substitution requests are subject to additional LEED-S submittal requirements, see SECTION 012500-SUBSTITUTION PROCEDURES.

1.05 ADDITIONAL MATERIALS

A. Upon completion of the mat flooring work, furnish to maintenance representative of the Owner, the following materials for future maintenance replacement:

1. Twenty (20) lineal feet of each grille insert material, in each color used.

B. Additional materials shall be taken from the same manufacturer's run used on the project, to avoid possible deviation in colors.

1.06 PRODUCT DELIVERY, STORAGE AND HANDLING

A. All materials shall be delivered in their original unopened packages and protected from exposure to the elements.

B. Damaged or deteriorated materials shall be removed from the premises.

C. Liquid materials shall be stored at a temperature not less than 45 degrees F.

PART 2 PRODUCTS

2.00 LEEDv4-S PRODUCT REQUIREMENTS:

A. Products and materials used for this section of the work are required to meet the following criteria for LEEDv4-S materials Credits, and a completed LEEDv4-S MATERIALS REPORTING FORM shall be submitted for all materials in this SECTION:

1. Furnish any adhesives and sealants, meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113 - SUSTAINABLE DESIGN REQUIREMENTS.

2. Furnish all flooring materials and all associated adhesives/sealants and paints/coatings such that they meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113 - SUSTAINABLE DESIGN REQUIREMENTS.

2.01 GENERAL

A. Refer to Drawings for locations and sizes of mats.

2.02 MANUFACTURE

A. To establish a standard of quality, construction and design, manufacture has been based upon products by Forbo Flooring Systems, Hazelton, PA. Similar mats and grilles by other manufacturers will be considered for approval by the Architect, upon receipt of adequate supporting data and samples.

B. Interior Grilles – Grilles shall have steel linkage and scraper bars with wiper strip inserts and metal perimeter edging. Grilles are based upon “Nuway Tuftguard” by Forbo.

1. Assembly: aluminum (100% recycled) brass scraper bars and buffed prime rubber and polyamide fiber composite wiper strips. Wiper strips ad scraper bar assembled in a closed construction with high tensile electro galvanized steel wire linkages running through the components.

2. Size: Refer to edge of slab drawings (series 3.4) and V.I.F. extent of slab depression.

3. Style: Classic; 17mm.

C. Interior Mats – Mats shall be reinforced with resilient monofilament fiber strips composed of capillary, heavy-duty textured yarn.

1. Coral Brush by Forbo mats incorporate three types of 100% polyamide cut-pile forms and vinyl backing. Two colors shall be used. Color Type 1 and Color Type 2.

a. Physical Characteristics: (dimensions are approximate)

Gouge	(0.354 in.) 9mm
Backing	EVERFORT vinyl
Width	Approx. 79 in. (2 meters)

Length 90.22 ft. (27.5 meters)
Roll Size 65.78 yards^2 (55 meters^2)
Mat Sizes: Refer to Drawings

b. Slip Resistance: Meets or exceeds A.D.A. recommendation of 0.6 for flat surfaces when tested in accordance with ASTM D 2047, Standard Test Method for Static Coefficient of Friction.

c. Durability: Wear Classification of 33 when tested in accordance to EN 1307.

d. Castor Resistance: Suitable for office chairs with castors when tested in accordance with EN 985, Castor Chair Test.

e. Impact Sound Reduction: 32db when tested in accordance with ISO 140-8, Measurement of sound insulation in buildings and of building elements. aW 0.25 when tested in accordance with ISO 354, Measurement of sound absorption in a reverberation room.

f. Fire Testing: Class 1 when tested in accordance with ASTM E 648/NFPA 253, Standard Test Method for Critical Radiant Flux. Meets 450 or less when tested in accordance with ASTM E 662/NFPA 258, Standard Test Method for Smoke Density. Passes when tested in accordance to ASTM D 2859, Standard Test Method for ignition Characteristics of Finished Textile Floor Covering Materials/Pill Test.

g. Color Fastness: Rated 5.0 when tested in accordance to AATCC 129-01, Colorfastness to Ozone in Atmosphere Under High Humidity. Rated 5.0 when tested in accordance to AATCC 129-01, Colorfastness to Oxide of Nitrogen in Atmosphere Under High Humidity.

2.03 FABRICATION

A. General: Where possible, verify sizes by field measurement before shop fabrication.

B. Grilles: Shop fabricate units to greatest extent possible in sizes as indicated. If not otherwise indicated, provide single unit for each mat installation; do not exceed manufacturer's recommended maximum sizes for units that are removed for maintenance and cleaning. Where joints in mats are necessary, space symmetrically and away from normal traffic lanes. Miter corner joints in framing elements with hairline joints or provide prefabricated corner units without joints.

C. Recessed Metal Mat Frames: Extruded aluminum of size and style to fit floor mat type specified, for permanent recessed installation, complete with corner pins or reinforcement and anchorage devices.

1. Fabricate edge-frame members in single lengths or, where frame dimensions exceed maximum available lengths, provide minimum number of pieces possible, with hairline joints equally spaced and pieces spliced together by straight connecting pins.

D. With manufacturer's standard protective coating, coat surfaces of aluminum frames that will contact cementitious material.

2.04 FINISHES, GENERAL

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

2.05 ALUMINUM FINISHES

A. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.

B. Class II, Clear Anodic Finish: AA-M12C22A31 (Mechanical Finish: non-specular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class II, clear coating 0.010 mm or thicker) complying with AAMA 611.

2.06 APPLICATION

A. It is the intent of this SECTION that the carpet and the additional backing be fabricated as a single system and delivered to the job site for installation. The carpet and backing as a system shall meet all requirements for CLASS I fire rating.

2.07 ADHESIVES (MOISTURE MITIGATION)

A. Adhesives – as recommended by the respective Mat Manufacturers and in compliance with:

1. Relative humidity (RH) up to 99%.
2. Alkalinity (pH) range not less than 7 and/or not greater than 11.

B. Manufacturers shall be compatible with products provided herein and be one of the following or an approved equal:

1. “Sustain 1299” adhesive (by Forbo International)
2. “Magellan XPA” adhesive (by LJM Technologies)
3. “AquaFlex” adhesive (by Formulators, Inc.)

4. Other manufacturers of similar moisture mitigation system / product / adhesives meeting SCAQMD, Rule 1168 for low VOC adhesives will be considered as an equal upon receipt of adequate supporting data and performance criteria.

PART 3 EXECUTION

3.01 MOISTURE CONTENT OF CONCRETE SLABS

A. Monitor Moisture Content of Concrete Slabs

1. Monitor moisture content of new concrete floor slabs to receive floor finishes to verify that moisture control procedures are sufficient to dry slabs sufficiently to permit floor finishes to be installed.
2. Continuously monitor relative humidity and moisture content of floor slabs starting after curing of concrete is complete. Perform the following procedures at least once every two weeks, increase frequency to once per week for the month prior to floor finish installation.
    a) Perform a hydrous calcium chloride test, ASTM F 1869.
    b) Perform relative humidity test using in situ probes, ASTM F 2170.
3. ***Conduct minimum of one test for each 150 sq. ft.*** of floor area or more frequently when drying rate is slower than anticipated.

3.02 SUBSTRATE

A. Sub floor preparation, including installation of moisture mitigation system and leveling materials as recommended by the respective resilient flooring material manufacturers.

1. The resilient flooring subcontractor shall be responsible for furnishing and installing leveling materials as recommended by respective manufacturers for the various substrate conditions resulting in smooth, feathered changes in plane.
2. Concrete subfloor preparation, including leveling to be performed under this SECTION, shall include but is not limited to the following:
    a. Filling of minor cracks and imperfections in new subfloors.

3.03 INSTALLATION

A. Install recessed mat frames to comply with manufacturer's written instructions. Set mat tops at height recommended by manufacturer for most effective cleaning action; coordinate top of mat surfaces with bottom of doors that swing across mats to provide clearance between door and mat.

1. Install necessary shims, spacers, and anchorages for proper location and secure attachment of frames.
2. Install grout and fill around frames and, if required to set mat tops at proper elevations, in recesses under mats. Finish grout and fill smooth and level.

3.04 PROTECTION

A. After completing frame installation and concrete work, provide temporary filler of plywood or fiberboard in recesses and cover frames with plywood protective flooring. Maintain protection until construction traffic has ended and Project is near Substantial Completion.

B. Defer installation of floor mats until Project is near Substantial Completion.

3.05 CLEANING

A. General Cleaning: Refer to Manufacturer's Cleaning and Maintenance Instructions.

B. Owner's Personnel: Instruct Owner's personnel in proper maintenance procedures.

END OF SECTION

Division 14
Conveying Systems

SECTION 140001

ELEVATORS

*(Filed Sub-Bid Required)

PART 1 GENERAL

1.00 TIME, MANNER AND REQUIREMENTS FOR SUBMITTING TRADE SUB-BIDS

A. Trade Sub-bids shall be submitted in accordance with provisions of the General Laws (Ter. Ed.), Chapter 149, Section 44A to 44L, inclusive, as amended. The time and place for submission to Sub-Bids shall be set forth under INSTRUCTIONS TO BIDDERS.

B. Each Trade Sub-Bid filed with the Awarding Authority must be accompanied by BID BOND, or CERTIFIED CHECK, or a TREASURER'S CHECK or CASHIER'S CHECK issued by a responsible bank or trust company, payable to the **City of Amesbury**, in the amount stipulated in the INSTRUCTIONS TO BIDDERS. A Trade Sub-Bid accompanied by any other form of bid deposit than those specified will be rejected.

C. Each Trade Sub-Bid submitted for the work, under this SECTION, shall be on a form furnished by the Awarding Authority, and required by SECTION 44F of Chapter 149 of the General Laws, as amended.

D. Work to be performed under this SECTION is shown on Contract Drawings numbered:

G.0.01, G.0.02, G.0.04-G.0.08, inclusive; 2.1.00-2.8.03, inclusive; 3.4.01-3.5.01, inclusive; 5.2.01-5.2.07, inclusive; 5.4.01-5.5.03, inclusive; 7.4.01; 9.4.01-9.8.07, inclusive; 9.7.01-9.7.07, inclusive; and 10.0.01-10.3.13, inclusive.

Remaining Contract Drawings are included for reference and coordination.

1.01 GENERAL REQUIREMENTS

A. PART A and DIVISION 1 of PART B are hereby made a part of this SECTION.

B. Examine all conditions as they exist at the project prior to submitting a sub-bid for the work of this SECTION.

1.02 SCOPE OF WORK

A. Provide all materials, labor and equipment required for the complete installation of the work of this Section including but not limited to:

1. One three-stop machine room-less (MRL) elevator system.
2. Emergency battery back-up for lowering of cab and opening of doors during power outage for a period of one hour.

B. Provide all labor, engineering, tools, transportation, services, supervision, materials, and equipment necessary for and incidental to satisfactory completion of required work as indicated in Contract Documents.

C. Provide all required staging, hoisting, and movement of new equipment.

D. Furnish and install sill support angles as necessary.

E. Elevator subcontractor shall provide empty conduit and a back box in elevator cab for a card reader access control system.

F. All code mandated signage: elevator certificate frame, no smoking and serial numbers; code compliant signage on Elevator Control Room door; code compliant signage on head of frame at main elevator entrance level.

G. Furnish and install an emergency battery back-up for lowering cab and opening doors during a power outage.

H. Elevator subcontractor's duties include, but are not limited to, the following:

1. Coordination, scheduling, and management of work of component suppliers and subcontractors.
2. Furnish and install equipment as specified utilizing newly constructed hoistway and control room.
3. Coordinating with and assisting electrical subcontractor with running LAN cabling in hoistway duct to the monitoring equipment compartment in each machine room. Elevator contractor to coordinate with electrical contractor to install all required wiring/cabling for a complete system. Include in the base bid the required time to assist with LAN cable installation. No additional fees will be accepted for coordination and assisting with cable installation by the electrical contractor.
4. Provide and pay for labor, materials and equipment, tools, construction equipment and machinery, and other facilities and services necessary for proper execution and completion of required work.
5. Give required notices.
6. Comply with codes, ordinances, rules, regulations, orders and other legal requirements of public authorities which bear on performance of required work.
7. Promptly submit written notice to Architect of observed variance of Contract Documents from legal requirements.
8. Enforce strict discipline and good order among employees. Do not employ persons unskilled in assigned task.

I. Furnish the following items for installation under the designated SECTIONS:

1. All inserts including elevator shaft angles and rail supports to be installed/secured to masonry: by SECTION 040001-MASONRY.
2. All inserts required to be installed in concrete: SECTION 033000-CAST-IN-PLACE CONCRETE.

3. All inserts required to be attached to structural steel: SECTION 051200-STRUCTURAL STEEL.

J. LEEDv4-S Requirements (Refer to SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS):

1. The work of this section includes material and submittal requirements for fulfillment of Project LEEDv4-S Certification. LEEDv4-S Certification at "Silver" Level is an Owner Requirement that is critical to secure project funding from Massachusetts School Building Authority. LEEDv4-S requirements for the work of this section are detailed herein, and additionally in DIVISION 1 of this Project Manual.

2. Meet the LEEDv4-S requirements for MR Credit 2, Building Product Disclosure and Optimization – Environmental Product Declarations as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS. Provide manufacturers' product documentation for each product having an Environmental Product Declaration (EPD).

1.03 RELATED WORK SPECIFIED ELSEWHERE

A. The following related work is to be performed under the designated SECTIONS:

1. The following shall be provided under SECTION 015000-TEMPORARY FACILITIES AND CONTROLS.

a. Temporary electrical power for erection requirements and testing purposes.

b. Protection for hoistway during installation of elevator equipment.

2. Concrete, in conjunction with the elevator equipment: SECTION 033000-CAST-IN-PLACE CONCRETE.

3. Hoistway and grouting solid masonry at sill support angles and other attachments: SECTION 040001-MASONRY.

4. Ladder for elevator pit and bar grate cover for sump: SECTION 050001-MISCELLANEOUS AND ORNAMENTAL IRON.

5. Waterproofing, for elevator pit: SECTION 070001-WATERPROOFING, DAMPPROOFING AND CAULKING.

6. Finish flooring for cab: SECTION 090005-RESILIENT FLOORING.

7. Voice station cabling to phone connection to police department and fire department: SECTION 275000-DISTRIBUTED COMMUNICATION SYSTEM.

8. The following shall be provided under SECTION 260001-ELECTRICAL.

a. Lighting and GFCI convenience outlets in pit, machine room, and overhead machinery spaces. (Provide one additional non-GFCI convenience outlet in pit for sump pump –

b. Three-phase mainline copper power feeder with true earthen grounding to terminals of each elevator controller in the machine room with protected, lockable "open"

c. Single-phase copper power feeder to each elevator controller for car lighting and exhaust blower with individual protected, lockable "open" disconnecting means located in machine room.

d. Emergency telephone line to each individual elevator control panel in elevator machine room.

e. Fire alarm initiating devices in each elevator lobby for each group of elevators or single elevator and each machine room to initiate firefighters' return feature. Provide alarm initiating signal wiring or machine room connection point to elevator controller terminals. Device in machine room to provide signal for general alarm and discrete signal for Phase II firefighters' operation.

f. Conduit from the closest hoistway of each elevator group or single elevator to the firefighters' control room or lobby panel if present. Coordinate size, number, and location of conduits with Elevator Contractor.

9. Card / Proximity Reader Security System provided and installed (including reader control units, mounting brackets, wiring materials, logic circuits): SECTION 281000-INTEGRATED SECURITY SYSTEM.

10. Area of Rescue Assistance system and signage: SECTION 260001-ELECTRICAL.

1.04 SUBMITTALS

A. Submit shop drawings in accordance with the provisions of SECTION 013300-SUBMITTALS.

B. Shop Drawings shall include general arrangements of elevator equipment, installation details dimensioned with relation to structural conditions, and all electrical characteristics and requirements for the equipment. Indicate the following information on the shop drawings.

1. Provide large scale (minimum ½ inch) shop drawings for fabrication, installation and erection. These drawings shall include plan view of hoistway, pit, section through pit, hoistway; detailed scaled drawings of all accessories, fixtures, anchorages and connections. Include rail reactions and load reactions in elevator pit. Provide scaled plan elevations and details of car enclosures and hoistway entrances.

2. Elevator diagrams showing service to each level. Show layout, access, and ventilating requirements for hoistway.

3. Seismic design data in accordance with A17.1 Part XXIV for Seismic Risk Zone 2 or greater. Only steel "T" rails are to be used and rail connections shall comply with seismic requirements of the Massachusetts Building Code, certified by a Professional Structural Engineer who is registered in the Commonwealth of Massachusetts.

4. Elevator control functions and operational description.

C. Submit scaled shop drawing layouts for all code required signage for Elevator Control Room door and at main level elevator head frame.

D. Product Data: Provide data on the following items:

1. Signal and operating fixtures, operating panels, indicators.
2. Cab design, dimensions, layout and components.
3. Cab and hoistway door and frame details.

E. The elevator subcontractor shall submit the following certificate, signed by an officer of the company with the shop drawings: “I certify that all materials and equipment shown on the attached shop drawings, to be installed at **New Amesbury Elementary School, Amesbury, MA**, comply with the specifications in all respects.”

F. Schematic: Provide legible schematic of electric wiring diagrams describing installed equipment. Provide one copy of master schematic, mounted in plastic glazed metal frame, mounted in elevator pit next to access pit loader.

G. All equipment included in the elevator installation shall have repair or replacement parts readily accessible to the general elevator trade. Without limitation, this shall include diagnostic tools, solid state boards, and controller components required for the complete maintenance of the installed equipment. See section G1. i-k below.

H. In accordance with SECTION 017823-OPERATIONS AND MAINTENANCE DATA, upon completion of the installation, the elevator contractor shall submit to the Architect for transmittal to the Owner the items listed herein.

1. Maintainable Equipment Design: OEM equipment is acceptable if this section can be adhered too in every detail.
    a. Provide three sets of neatly bound written information necessary for proper maintenance and adjustment of equipment within 30 days following final acceptance. Final retention will be withheld until data is received by Owner and reviewed by Consultant. Include the following as minimums:
    b. Straight-line wiring diagrams of “as-installed” elevator circuits with index of location and function of components. Mount one set wiring diagrams on panels, racked, or similarly protected, in elevator machine room. Provide remaining set rolled and in a protective drawing tube. Maintain all drawing sets with addition of all subsequent changes. These diagrams are Owner’s property. A legend sheet shall be furnished with each set of drawings to provide the following information:
        1) Name and symbol of each relay, switch, or other apparatus.
        2) Location on drawings, drawing sheet number and area, and location of all contacts.
        3) Location of apparatus, whether on controller or on car.

c. Written Maintenance Control Program (MCP) specifically designed for the equipment included under this contract. Include any unique or product specific procedures or methods required to inspect or test the equipment. In addition, identify weekly, bi-weekly, monthly, quarterly, and annual maintenance procedures, including statutory and other required equipment tests.

d. Printed instructions explaining all operating features.

e. Complete software documentation for all installed equipment.

f. Lubrication instructions, including recommended grade of lubricants.

g. Parts catalogs listing all replaceable parts including Contractor's identifying numbers and ordering instructions.

h. Four sets of keys for all switches and control features properly tagged and marked.

i. Diagnostic test devices together with all supporting information necessary for interpretation of test data, troubleshooting of elevator system, and performance of routine safety tests.

j. The elevator installation shall be a design which can be maintained by any licensed elevator maintenance company employing journeymen mechanics, without the need to purchase or lease additional diagnostic devices, special tools, or instructions from the original equipment Contractor.

1) Provide onsite capability to diagnose faults to the level of individual circuit boards and individual discrete components for the solid-state elevator controller.

2) Provide a separate, detachable device to the Owner as part of this installation if the equipment for fault diagnosis is not completely self-contained within the controller. Such device shall be in possession of and become property of the Owner.

3) Installed equipment not meeting this requirement shall be removed and replaced with conforming equipment at no cost to the Owner.

k. Provide upgrades and/or revisions of software during the progress of the work and a period of 10 years.

2. Acceptance of such records by Owner and/or Consultant shall not be a waiver of any Contractor deviation from Contract Documents or shop drawings or in any way relieve Contractor from his responsibility to perform work in accordance with Contract Documents.

l. Maintenance Instruction – In accordance with the provisions of SECTION 017700-PROJECT CLOSEOUT, provide the Owner's maintenance staff with up to eight hours of operation and maintenance instruction for the installed elevator systems.

J. Submit the following samples in accordance with the provision of SECTION 013300-SUBMITTALS.

1. Manufacturer's standard samples of plastic laminate proposed for use in cars, for color and pattern selection by the Architect.
2. Samples chips of all paints and finishes proposed for use, for selection by the Architect.

K. LEEDv4-S Submittal Requirements (See SECTION 013300-SUBMITTALS)

1. Relevant supporting documentation required by LEED for Schools v4 and as detailed in Section 018113-Sustainable Design Requirements.
2. A completed LEED MATERIALS REPORTING FORM, per SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

1.05 QUALITY ASSURANCE

A. Consultant’s final observation and review requirements:

1. Review procedure shall apply for individual elevators, portions of groups of elevators and completed groups of elevators accepted on an interim basis, or elevators and groups of elevators completed, accepted, and placed in operation.
2. Contractor shall perform review and evaluation of all aspects of its work prior to requesting Consultant’s final review. Work shall be considered ready for Consultant’s final contract compliance review when all Contractor’s tests are complete and all elements of work or a designated portion thereof are in place and elevator or group of elevators are deemed ready for service as intended.
3. Furnish labor, materials, and equipment necessary for Consultant’s review. Notify Consultant five working days in advance when ready for final review of elevator or group of elevators.
4. Consultant’s written list of observed deficiencies of materials, equipment, and operating systems shall be submitted to Contractor for corrective action. Consultant’s review the following.
    a. Workmanship and equipment compliance with Contract Documents.
    b. Contract speed, capacity, floor-to-floor, and door performance comply with Contract Documents.
    c. Performance of following is satisfactory:
        1) Starting, accelerating, running
        2) Decelerating and stopping accuracy
        3) Door operation and closing force
        4) Equipment noise levels
        5) Signal fixture utility
        6) Overall ride quality

7) Performance of door control devices

8) Operations of emergency two-way communication device

9) Operations of firefighters' service

10) Operations of seismic devices if installed

11) Operations of special security features and floor lock-off provisions

12) Operations of remote monitoring devices

d. Test Results:

1) In all test conditions, obtain specified contract speed, performance times, stopping accuracy without re-leveling, and ride quality to satisfaction of Owner and Consultant. Tests shall be conducted under both no load and full load condition.

2) Temperature rise in motor windings limited to 50° Celsius above ambient. A full-capacity one-hour running test, stopping at each floor for ten seconds in up and down directions, may be required.

5. Performance Guarantee: Should Consultant's review identify defects, poor workmanship, variance or noncompliance with requirements of specified codes and/or ordinances, or variance or noncompliance with the requirements of Contract Documents, Contractor shall complete corrective work in an expedient manner to satisfaction of Owner and Consultant at no cost as follows:

a. Replace equipment that does not meet code or Contract Document requirements.

b. Perform work and furnish labor, materials, and equipment necessary to meet specified operation and performance.

c. Perform retesting required by Governing Code Authority, Owner, and Consultant.

6. A follow-up final contract compliance review shall be performed by Consultant after notification by Contractor that all deficiencies have been corrected. Provide Consultant with copies of the initial deficiency report marked to indicate items which Contractor considers complete.

1.06 ELEVATOR ACCEPTANCE

A. The elevator installation shall be fully operational, with all necessary permits, tests and inspections obtained, prior to acceptance by the Architect. All equipment shall be test operated, and adjusted by the elevator subcontractor and the proper operation of the elevator and its various component systems shall be demonstrated to the Owner.

1.07 SERVICE AND GUARANTEE

A. Provide preventive maintenance and emergency callback service for one year commencing on date of final acceptance by Owner. Systematically examine, adjust, clean, and lubricate all equipment. Repair or replace defective parts using parts produced by the Contractor of installed equipment. Maintain elevator machine room, hoistway and pit in clean condition.

B. Maintenance shall be performed on regular time. Included overtime callbacks and any repairs necessary to restore the elevator to operation as necessary.

C. Annual test permit and labor to perform the annual test before the end of the warranty period shall be included. Apply for permit 90 days prior to the end of the warranty period.

D. Use competent personnel, acceptable to the Owner, supervised and employed by Contractor.

E. The warranty maintenance period shall be extended one month for each three-month period in which equipment related failures average more than 1 per unit per month.

1.08 DEFINITIONS

A. All terms in this Specification shall have the meaning defined in the Safety Code for Elevators, Dumbwaiters, Escalators and Moving Walks A17.1, as approved by the United States of America Standards Institute, including all revisions and authorized changes to date. In all cases where a device or part of the equipment is herein referred to in the singular number, it is intended that such reference shall apply to as many such devices as are required to complete the installation.

1.09 CODES

A. Compliance with Regulatory Agencies: Comply with most stringent applicable provisions of following codes, laws, and/or authorities, including revisions and changes in effect:

1. Safety Code for Elevators and Escalators, ASME A17.1 and Massachusetts 524 CMR
2. Guide for Inspection of Elevators, Escalators, and Moving Walks, ASME A17.2
3. Elevator and Escalator Electrical Equipment, ASME A17.5
4. National Electrical Code, NFPA 70
5. Americans with Disabilities Act, ADA
6. Local Fire Authority
7. Requirements of IBC, DSA, and all other Codes, Ordinances and Laws applicable within the governing jurisdiction
8. Life Safety Code, NFPA 101
9. Uniform Federal Accessibility Standard, UFAS

1.10 PERMITS, TESTS AND INSPECTIONS

A. Obtain and pay for necessary Municipal or State Elevator Inspections and permits; also, make such tests as called for by the regulations of such authorities. The capacity and operational performance tests shall be conducted in the presence of the code enforcement officer after completion of the installation.

1.11 INSERTS

A. Provide all items which require insertion into the concrete and masonry or be secured to the structural steel in sufficient time as not to delay the progress of the respective trades. Should such items not be delivered in time to be built in, the Elevator Subcontractor shall pay all costs for the cutting and installation of same.

1.12 POWER REQUIREMENTS

A. Elevator power supply: 480 Volts, 3-phase, 3 wire, 60 hertz with reduced voltage starting. Feeders and breakers furnished and installed under SECTION 260001 have been engineered based upon the following elevator apparatus power requirements:

1. Tractor Drive Rating: 15 HP

   Full Load Amps

   Running: 24 Amps

   Accelerating: 36 Amps

B. Lighting supply: 120 Volts, 15 AMP capacity, 60 hertz.

C. Starters shall be solid state type.

1.13 CHANGES IN THE WORK

A. The Elevator Subcontractor shall bear all costs incurred for changes in the work from that shown on the Contract Drawings, due to the requirements of this equipment.

B. Hoistway Coordination, Spatial Coordination, Building Coordination: Provide a complete, fully functional, Code complying elevator system and assembly which fits the hoistway and spaces indicated and which is coordinated with the adjacent and related work indicated.

1. Do not assume the hoistway or any other space will be resized or reconfigured to accommodate the proposed or submitted elevator. Make the elevator fit the hoistway and spaces indicated.

2. Do not assume any other building modifications will be made to accommodate the elevator installation. The total cost of all modifications required to install the submitted elevator system including, without limitation, modifications to run by space, doors, access panels, structural members, walls, ceilings, floors, stairs, steps, platforms, ladders, guards, louvers, vents, power, services, utilities, fire alarms and any other item or work shall be included in the base bid elevator cost.

PART 2 PRODUCTS

2.00 LEEDv4-S REQUIREMENTS

A. Products and materials used for this section of the work are required to meet the following criteria for LEEDv4-S materials Credits, and a completed LEEDv4-S MATERIALS REPORTING FORM shall be submitted for all materials in this SECTION:

1. Furnish any adhesives, sealants, paints and coatings such that they meet the requirements for IEQ Credit 2, Low-Emitting Materials as defined in SECTION 018113 - SUSTAINABLE DESIGN REQUIREMENTS.
2. Recycled Content. (See SECTION 018113 - SUSTAINABLE DESIGN REQUIREMENTS for overall project recycled content requirements.) General Contractor shall examine each product or material specification below for a stated minimum recycled content requirement, and if none is stated, the requirements under 018113 shall govern.
3. Regional Content. (See Section 018113 Sustainable Design Requirements for overall project regional content requirements.) General Contractor shall examine each product or material specification below for a stated minimum regional content requirement, and if none is stated, the requirements under 018113 shall govern.
4. Furnish any composite wood and agrifiber products such that they meet the formaldehyde emissions requirement for CARB ATCM for ultra-low-emitting formaldehyde (ULEF) or no-added formaldehyde (NAF). Laminating adhesives used to fabricate on-site and shop applied composite wood and agrifiber assemblies must also meet this requirement. Refer to the requirements for IEQ Credit 2 as defined in SECTION 018113-SUSTAINABLE DESIGN REQUIREMENTS.

2.01 ELEVATOR MATERIALS AND EQUIPMENT

A. Manufacturer: To establish a standard of quality, design and function, drawings and specifications are based on the following manufacturers or client approved equal:

1. Controllers: KONE, Otis, Schindler, ThyssenKrupp, Motion Control (MCE), Vertitron Midwest (VMI) Elevator Controls, (EC), SmartRise,
2. Door Operators: KONE, GAL, Otis, Schindler, ThyssenKrupp, AMD
3. Traction Elevator, KONE, Otis, Schindler, ThyssenKrupp, Imperial
4. Car Enclosure: Eklund's Inc., Gunderlin, Ltd., Hauenstein & Burmeister, KONE, Otis, Schindler, ThyssenKrupp, Tyler
5. Hoistway Entrance: Hauenstein & Burmeister, KONE, Otis, Schindler, ThyssenKrupp, Tyler,

B. Elevators and elevator equipment manufactured by other manufacturers will be considered as an equal by the Architect upon receipt of adequate supporting data.

C. Description of Elevator Equipment and Car

Quantity	One
Type of Elevator	Gearless, Machine Room-Less (MRL) Passenger Elevator
Operation	Microprocessor based simplex collective
Drive	AC, VVVF
Capacity, Class A	3,500 lbs.
Car Speed (FPM)	200 FPM
Travel in Feet	30 feet 0 inches
Number of landings	3
Number of Openings	3
Front	3
Rear	0
Machine Location	In hoistway overhead, rail mounted
Car Doors	3 ft.-6 in. wide x 7 ft. high, single speed side opening
Hoistway Doors	3 ft.-6 in. wide x 7 ft. high, single speed side opening
Cab Interior (clear inside must meet stretcher code)	6 ft.-8 in. wide x 5 ft.-5 in. deep
Door Operation	Automatic Medium Speed, 2.0 fps. Power-Operated for Car and Hoistway Doors
Seismic	Install elevator in accordance with A17.1 Part XXIV for Seismic Risk Zone 2 or greater and Seismic requirements of the Massachusetts Building Code.

D. Furnish and install, including necessary hardware and software to the elevator controllers, emergency battery back-up for lowering cabs and opening doors during power outage.

E. Materials – General

1. Steel:

   a. Sheet Steel (for Unexposed Work): Hot-rolled, commercial quality carbon steel, pickled and oiled, complying with ASTM A568/A568M-03.

   b. Structural Steel Shapes and Plates: ASTM A36.

2. Stainless Steel (**All Exposed Work**): Type 302 or 304 complying with ASTM A240, or equal with standard tempers and hardness required for fabrication, strength and durability. Apply mechanical finish on fabricated work in the locations shown or specified, Federal Standard and NAAMM nomenclature, with texture and reflectivity required to match Architect's sample. Protect with adhesive paper covering.

   a. No. 4 Satin: Directional polish finish. Graining directions as shown or, if not shown, in longest dimension.

3. Aluminum: Extrusions per ASTM B221; sheet and plate per ASTM B209.

4. Plastic Laminate: ASTM E84 Class A and NEMA LD3.1, Fire-Rated Grade (GP-50), Type 7, 0.050 in. ±.005 in. thick, color and texture as follows:

   a. Exposed Surfaces: Color and texture selected by Architect.

   b. Concealed Surfaces: Contractor's standard color and finish.

5. Fire-Retardant Treated Particle Board Panels: Minimum 3/4" thick backup for natural finished wood and plastic laminate veneered panels, edged and faced as shown, provided with suitable anti-warp backing; meet ASTM E84 Class "I" rating with a flame-spread rating of 25 or less, registered with local authorities for elevator finish materials.

6. Paint: Clean exposed metal parts and assemblies of oil, grease, scale, and other foreign matter and factory paint one shop coat of standard rust-resistant primer. After erection, provide one finish coat of industrial enamel paint. Galvanized metal need not be painted.

7. Prime Finish: Clean all metal surfaces receiving a baked enamel paint finish of oil, grease, and scale. Apply one coat of rust-resistant primer followed by a filler coat over uneven surfaces. Sand smooth and apply final coat of primer.

8. Baked Enamel Finish: Prime finish per above. Unless specified "prime finish" only, apply and bake three additional coats of enamel in the selected solid color.

9. Entrance Support Equipment within Hoistway: Include strut angles, headers, sill support angles, fascia, hanger covers, and similar items. Clean, remove, and check for corrosive activity. Replace components that exhibit severe deterioration. Tighten all fastenings. Repaint exposed surfaces with two coats of rust preventive primer.

2.02 CAR AND GROUP PERFORMANCE

A. Car Speed: ± 3% of contract speed under any loading condition.

B. Car Capacity: Safely lower, stop and hold 125% of rated load.

C. Car Stopping Zone: ±1/4 in. under any loading condition.

D. Door Opening Time: 2.5 Seconds from start of opening to fully open. (typical 42 in. x 84 in. SSSO doors)

E. Door Closing Time: 4.0 Seconds from start of opening to fully closed. (typical 42 in. x 84 in. SSSO doors)

F. Car Ride Quality:

1. Acceleration and Deceleration: Smooth constant and not more than 3 feet/second^2 with an initial ramp between 0.5 and 0.75 second.
2. Sustained Jerk: Not more than 6 feet/second^3.
3. Measurement Standards: Measure and evaluate ride quality consistent with ISO 18738, using low pass cutoff frequency of 10 Hz and A95 peak-to-peak average calculations.

G. Noise and Vibration Control:

1. Airborne Noise: Measured noise level of elevator equipment and its operation shall not exceed 55 dBA inside car under any condition including door operation and car ventilation exhaust blower on its highest speed. Limit noise level in the machine room relating to elevator equipment and its operation to no more than 80 dBA. All dBA readings to be taken 3 ft. off the floor and 3 ft. from the equipment using the "A" weighted scale.
2. Vibration Control: All elevator equipment provided under this contract, including power unit, controller, oil supply lines, and their support shall be mechanically isolated from the building structure and electrically isolated from the building power supply and to each other to minimize the possibility of objectionable noise and vibrations being transmitted to occupied areas of the building.

2.03 OPERATION

A. Selective Collective Microprocessor-Based.

1. Operate car without attendant from pushbuttons in car and located at each floor. When car is available, automatically start car and dispatch it to floor corresponding to registered car or hall call. Once car starts, respond to registered calls in direction of travel and in the order the floors are reached.
2. Do not reverse car direction until all car calls have been answered, or until all hall calls ahead of car and corresponding to the direction of car travel have been answered.
3. Slow car and stop automatically at floors corresponding to registered calls, in the order in which they are approached in either direction of travel. As slowdown is initiated for a hall call, automatically cancel hall call. Cancel car calls in the same manner. Hold car at arrival floor an adjustable time interval to allow passenger transfer.

4. Answer calls corresponding to direction in which car is traveling unless call in the opposite direction is highest (or lowest) call registered.

5. Illuminate appropriate pushbutton to indicate call registration. Extinguish light when call is answered.

B. Elevator Security:

1. Controls and fixtures including, but not limited to, car button, position, indicator, control panels, fans, lights, emergency call buttons, placards and access panels shall be of vandal resistance construction. All exposed fasteners shall be tamperproof.

2. In the car station install an on/off key switch adjacent to each floor landing push button. The key switch is to be removeable in both the on/off position and is to control that individual push button.

3. Install an on/off key switch in the ground floor hall station. The key is to removeable in both positions. When in the off position, the elevator shall shut down with the doors closed.

C. Other Items:

1. Load Weighing: Provide means for weighing car passenger load. Control system to provide dispatching at main floor in advance of normal intervals when car fills to capacity

2. Independent Service: Provide controls for operation of each car from its pushbuttons only. Close doors by constant pressure on desired destination floor button or door close button. Open doors automatically upon arrival at selected floor.

3. Car-to-Lobby Feature: Provide the means for automatic return to the floor. Return car nonstop after answering pre-registered car calls, and park with doors open for an adjustable time period of 60-90 seconds. Upon expiration of time period, car shall automatically revert to normal operation and close its doors until assigned as next car or until the car is placed on manual control via in-car attendant or out-of-service switch.

D. Firefighters' Service: Provide equipment and operation in accordance with code requirements.

E. Automatic Car Stopping Zone: Stop car within 1/4" above or below the landing sill. Maintain stopping zone regardless of load in car, direction of travel, distance between landing.

F. Remote Monitoring and Diagnostics: Equip each controller and the group dispatch logic controller, with standard ports, interface boards, and drivers to accept maintenance, data logging, fault finding diagnostic, and monitoring computers, keyboards, modems, and programming tools.

G. Motion Control: AC type with unit valve suitable for operation specified and capable of providing smooth, comfortable car acceleration and retardation. Limit the difference in car speed between full load and no load to not more than ±10% of the contract speed in either direction of travel.

H. Door Operation: Automatically open doors when car arrives at main floor. At expiration of normal dwell time, close doors. Reopen doors when car is designated for loading. Provide front or rear selective door operation if dual entrances are present. Provide "heavy door/variable air pressure" feature for consistent specified door operation within appropriate speed and inertia limits.

1. Elevator shall be programmed so that the cab control panel only responds after the card reader has been utilized from each floor landing upon which the cab floor buttons in the cabs will be activated.

I. Standby Lighting and Alarm: Car mounted battery unit with solid-state charger to operate alarm bell and car emergency lighting. Battery to be rechargeable with minimum five-year life expectancy. Include required transformer. Provide constant pressure test button in service compartment of car operating panel. Coordinate location of light fixture with Owner/Architect.

1. Emergency Battery Back-up - Furnish and install all necessary hardware and software to each elevator controller and provide emergency battery back-up. The battery lowering unit shall automatically lower the elevator cabs to the first floor and open the doors upon loss of power to the building. When normal power has been restored the elevator system shall return to normal operation.

J. Card/Proximity Reader Security System: Provide wiring provisions to interface with security devices provided by SECTION 281000-INTEGRATED SECURITY SYSTEMS for reader unit. Mount reader units as described below and cross connect from car pushbuttons to control module in machine room. Reader control units mounting brackets, wiring materials, logic circuits, and similar items by Security Subcontractor. Provide a filler plate to match card slot size and car return panel finish.

1. Install one (1) card reader at corridor call buttons at each floor level (total of 3).
2. Integrate with the elevator control system so that a positive card read at a card reader allows the elevator call button associated with a specific floor to be activated and respond. The call button shall not respond without first initiating a positive card read.
3. Installation and integration with the elevator control system shall be coordinated and performed in conjunction with the elevator subcontractor.

4. Install one (1) card reader inside each elevator cab (total of 1). Integrate with elevator control system so that a positive card read at a card reader allows the elevator cab call buttons to respond. The cab call buttons shall not respond without first initiating a positive card read.

5. Installation and integration with the elevator control system shall be coordinated and performed in conjunction with the security subcontractor.

2.04 HOISTWAY COMPONENTS

A. Guides for the elevator car shall be planed steel elevator "T" guide rails, 15 lbs./ft. properly fastened to the building structure with steel brackets. The car stile shall be fitted at top and bottom with roller type guide shoes.

B. Machine: AC gearless machine, rail mounted, with permanent magnet synchronous motor, direct current electro-mechanical disc brakes and integral traction drive sheave, mounted to the Gearless Traction Hoist Machine:

C. Governor: Friction type over-speed governor rated for the duty of the elevator specified.

D. Buffers, Car and Counterweight: Polyurethane buffer.

E. Hoistway Operating Devices:

1. Emergency stop switch in the pit
2. Terminal stopping switches.
3. Emergency stop switch on the machine

F. Positioning System: System consisting of magnets and proximity switches.

G. Buffers, Car, and Counterweight: Spring type with blocking and support channels.

H. Sheaves: Machined grooves and sealed bearings. Provide mounting means to machine beams, machine bedplate, car and counterweight structural members, or building structure.

I. Counterweight: Steel frame with metal filler weights.

J. Counterweight Guide Shoes: Spring dampened roller guide shoes.

K. Governor Rope and Encoder Tape Tensioning Sheaves: Mount sheaves and support frame on pit floor or guide rail. Provide frame with guides or pivot point to enable free vertical movement and proper tension of rope and tape.

L. Hoist and Governor Ropes:

1. 8 x 19 or 8 x 25 Seale construction, traction steel type. Fasten with staggered length, adjustable, spring isolated wedge type shackles or OEM suspension means for machine room-less elevators
2. Governor rope to suit Contractor's specification.

M. Electrical Wiring and Wiring Connections:

1. Conductors and Connections:
   a. Copper throughout with individual wires coded and connections on identified studs or terminal blocks.
   b. Use no splices or similar connections in wiring except at terminal blocks, control compartments, or junction boxes.
   c. Provide 10% spare conductors throughout. Run spare wires from car connection points to individual elevator controllers in the machine room.
   d. Provide four (4) pair of spare shielded communication wires in addition to those required to connect specified items.
   e. Tag spares in machine room.
2. Conduit:
   a. Painted or galvanized steel conduit, EMT, or duct.
   b. Minimum Conduit Size: 1/2 in.
   c. Flexible heavy-duty service cord may be used between fixed car wiring and car door switches for door protective devices.
   d. Conduit from the closest hoistway of each elevator group or single elevator to the firefighters' control room, and/or main control console. Coordinate size, number, and location of conduits with Electrical Contractor.
3. Traveling Cables:
   a. Flame and moisture-resistant outer cover.
   b. Prevent traveling cable from rubbing or chafing against hoistway or equipment within hoistway.
   c. Provide 5 pair of shielded wires and twisted shielded pair for card reader.
   d. Provide one (1) RG-6/U coaxial CCTV cables within traveling cable from car controller to car top, plus 3 f excess loop at both ends.
   e. Provide two pair 14-gauge wire for CCTV power.

4. Auxiliary Wiring: Connect fire alarm initiating devices, emergency two-way communication system, firefighters' phone jack, paging speaker, CCTV, card reader

2.05 MACHINE ROOM EQUIPMENT

A. Arrange equipment in existing machine room spaces and/or as shown on drawings.

B. Solid State Power Conversion and Regulation Unit:

1. Provide solid state, alternating current, variable voltage, variable frequency (ACV3F), I.G.B.T. converter/inverter drives.

2. Design unit to limit current, suppress noise, and prevent transient voltage feedback into building power supply. Provide internal heat sink cooling fans for the power drive portion of the converter panels. Conform to IEEE standards 519-1992 for line harmonics and switching noise.

3. Isolate unit to minimize noise and vibration transmission. Provide isolation transformers, filter networks, and choke inductors.

4. Suppress solid-state converter noises, radio frequency interference, and eliminate regenerative transients induced into the mainline feeders or the building standby power generator.

5. Supplemental direct-current power for the operation of hoist machine brake, door operator, dispatch processor, signal fixtures, from separate static power supply.

6. ACV3F Drives for gearless elevators shall be regenerative and utilize IGBT converter/inverter and dynamic braking during overhauling condition.

C. Encoder: Direct drive, solid-state, digital type. Update car position at each floor and automatically restore after power loss.

D. Controller: UL/CSA labeled.

1. Compartment: Securely mount all assemblies, power supplies, chassis switches, relays on a substantial, self-supporting steel frame. Completely enclose equipment with covers. Provide means to prevent overheating.

2. Relay Design: Magnet operated with contacts of design and material to insure maximum conductivity, long life, and reliable operation without overheating or excessive wear. Provide wiping action and means to prevent sticking due to fusion. Contacts carrying high inductive currents shall be provided with arc deflectors or suppressors.

3. Microprocessor-Related Hardware:

a. Provide built-in noise suppression devices which provide a high level of noise immunity on all solid-state hardware and devices.

b. Provide power supplies with noise suppression devices.

c. Isolate inputs from external devices (such as pushbuttons) with opto-isolation modules.

d. Design control circuits with one leg of power supply grounded.

e. Safety circuits shall not be affected by accidental grounding of any part of the system.

f. System shall automatically restart when power is restored.

g. System memory shall be retained in the event of power failure or disturbance.

h. Equipment shall be provided with Electro Magnetic Interference (EMI) shielding within FCC guidelines.

4. Wiring: CSA labeled copper for factory wiring. Neatly route all wiring interconnections and securely attach wiring connections to studs or terminals.

5. Permanently mark components (relays, fuses, PC boards) with symbols shown on wiring diagrams.

6. Provide controller or machine mounted auxiliary, lockable “open,” disconnect if mainline disconnect is not in sight of controller and/or machine.

2.06 HOISTWAY ENTRANCES

A. Complete entrances bearing fire labels from a certified testing laboratory approved by authority having jurisdiction.

B. Frames: 14-gauge stainless steel at all floors. Bolted and lapped head to jamb assembly at all floors. Provide Arabic floor designation/Braille plates, centered at 60" above finished floor, on both side jambs of all entrances. Provide plates at main egress landing with “Star” designation. For designated emergency car, provide “Star of Life” cast designation plates at height of 78 in. - 84 in. above finished floor on both side jambs at all floors. Braille indications shall be below Arabic floor designation. Provide cast floor designation/Braille plates as manufactured by SCS Elevator Products, Inc. with permanent rear fasteners.

C. Door Panels: 16-gauge stainless steel, sandwich construction without binder angles. Provide leading edges of center-opening doors with rubber astragals. Provide a minimum of two gibs per panel, one at leading and one at trailing edge with gibs in the sill groove entire length of door travel. Construct door panels with interlocking, stiffening ribs. Sight Guards: 14 gauge, same material and finish as hoistway entrance door panels. Construct without sharp edges.

D. Sills: Extruded nickel silver.

E. Sill Supports: Structural or formed steel designed to support door sill based upon car loading classification. Mount to eliminate need for grout under the sill.

F. Fascia, Toe Guards and Hanger Covers: 14-gauge stainless steel. Struts and Headers: Provide all support of entrances and related material to building structure. Provide door open bumpers on entrances equipped with vertical struts.

G. Elevator Identification Signage: Provide alpha-numerical car label at designated floor. Provide metal plate, finish to match designated fixture finish.

H. Finish of Frames and Doors: Satin Stainless Steel

I. Hoistway Access: Hoistway Access Switches: Mount in entrance frame side jamb at top and bottom

J. Entrance Equipment:

1. Door Hangers: Two-point hanger roller with neoprene roller surface and suspension with eccentric upthrust roller adjustment.
2. Door Tracks: Bar or formed, cold-drawn removable steel tracks with smooth roller contact surface.
3. Door Interlocks: Operable without retiring cam. Paint interlock box flat black.
4. Door Closers: Spring, spirator, or jamb/strut mounted counterweight type. Design and adjust to insure smooth, quiet mechanical close of doors.

K. Hoistway Access Switches: Mount in wall / entrance frame side jamb at top and bottom floors. Provide switch with faceplate.

L. Floor Numbers: Stencil paint 4 in. high floor designations in contrasting color on inside face of hoistway doors or hoistway fascia in location visible from within car.

2.07 CAR EQUIPMENT

A. Frame: Welded or bolted, rolled or formed stainless steel channel construction to meet load classification specified.

B. Safety Device: Type “B,” flexible guide clamp.

C. Platform: Isolated type, constructed of steel, or steel and wood that is fireproofed on underside. Design and construct to accommodate load classification requirements. Provide Class “A” construction for passenger elevators,. Provide recess to accommodate a minimum ½ in. floor thickness.

D. Platform Apron: Minimum 14-gauge steel, reinforced and braced to car platform with Contractor’s standard finish.

E. Guide Shoes: Roller type with three or more spring dampened, sound-deadening rollers per shoe. Minimum 6 in. outside diameter.

F. Finish Floor Covering:

1. Passenger Car: Resilient flooring shall be furnished and installed by SECTION 090005-RESILIENT FLOORING.

G. Sills: One-piece Nickel Silver extrusion with extruded extension between car entrance columns to face of car front return. Extruded extension to match finish of sill.

H. Door Panels: 16-gauge stainless steel, sandwich construction without binder angles. Provide leading edges of center-opening doors with rubber astragals. Provide a minimum of two gibs per panel, one at leading and one at trailing edge with gibs in the sill groove entire length of door travel. Construct door panels with interlocking, stiffening ribs. Door Hangers: Two-point suspension. Hanger roller with non-metallic surface and eccentric roller adjustment.

I. Door Track: Bar or formed, cold-drawn removable steel track with smooth roller contact surface.

J. Door Header: Construct of minimum 12-gauge stainless steel, shape to provide stiffening flanges.

K. Door Electrical Contact: Prohibit car operation unless car door is closed.

L. Door Clutch: Heavy-duty clutch, linkage arms, vane assembly and pickup rollers or cams to provide positive, smooth, quiet door operation. Design clutch so car doors can be closed, with hoistway doors open.

M. Restricted Opening Device: Provide mechanical car-door restrictor to prevent opening of doors when outside unlocking zone.

N. Door Operator: High speed, heavy-duty door operator capable of opening doors at no less than 2.0 fop's. Accomplish reversal in no more than 2-½ in. of door movement. Provide solid-state door control with closed loop circuitry to constantly monitor and automatically adjust door operation based upon velocity, position, and motor current. Provide a minimum of four controller-based motion profiles, per floor, per door, to maintain consistent, smooth, and quiet door operation at all floors, regardless of door weight or varying air pressure. Acceptable closed-loop door operators:

1. KONE
2. Otis
3. Schindler
4. ThyssenKrupp

5. GAL MOVFR

O. Door Reversing Device:

1. Infrared Reopening Device:

a. Black fully enclosed device with full screen infrared matrix or multiple beams extending vertically along leading edge of each door panel to minimum height of 7 ft. above finished floor. Device shall prevent doors from closing and reverse doors at normal opening speed if beams are obstructed while doors are closing, except during nudging operation. In event of device failure, provide for automatic shutdown of car at floor level with doors open.

2. Nudging Operation: After beams of door control device are obstructed for a predetermined time interval (minimum 20.0-25.0 seconds), warning signal shall sound and doors shall attempt to close with a maximum of 2.5 foot pounds kinetic energy. Activation of the door open button shall override nudging operation and reopen doors.

3. Interrupted Beam Time: When beams are interrupted during initial door opening, hold door open a minimum of 3.0 seconds. When beams are interrupted after the initial 3.0 second hold open time, reduce time doors remain open to an adjustable time of approximately 1.0-1.5 seconds after beams are reestablished.

4. Differential Door Time: Provide separately adjustable timers to vary time that doors remain open after stopping in response to calls.

a. Car Call: Hold open time adjustable between 3.0 and 5.0 seconds.

b. Hall Call: Hold open time adjustable between 5.0 and 8.0 seconds. Use hall call time when car responds to coincidental calls.

P. Car Operating Panel:

1. Passenger: One car operating panel applied or integral faceplate consisting of a metal box containing the vandal resistant operating fixtures, mounted behind the car swing front return panels.

a. Provide manually operated stop switch within Firefighters' Phase II compartment

b. Provide "door open" button to stop and reopen doors or hold doors in open position.

c. Provide "door close" button to activate door close cycle. Cycle shall not begin until normal door dwell time for a car or hall call has expired, except firefighters' operation.

d. Locked panel including Phase II fire access switch and hidden floor buttons, call cancel button, door open, door close, switch, stop switch, light jewel, fire communication jack within locked panel, for fire officer use and use of car on independent service only.

Q. Car Top Control Station: Mount to provide safe access and utilization while standing on car top.

R. Work Light and Duplex Plug Receptacle: GFCI protected outlet at top and bottom of car. Include on/off switch and lamp guard.

S. Communication System:

1. Two-way communication instrument in car with automatic dialing, tracking, and recall features, with shielded wiring to car controller in equipment space. Provide dialer with automatic rollover capability with minimum two numbers.

a. Actuate two-way communication via “Help” button.

b. Button or adjacent light jewel shall illuminate and flash when call is acknowledged.

c. Button shall match car operating panel pushbutton design.

d. Provide “Help” button tactile symbol, engraved signage, and Braille adjacent to button mounted integral with car front return panel.

2. Install remote speaker(s) provided under Item 1.01. E.1 in car behind front return panel with drilled speaker pattern, with shielded wiring to equipment space junction box.

3. Provide two-way communication between car and equipment space.

2.08 CAR ENCLOSURE

A. Passenger Elevator: Provide complete as specified herein.

1. Shell: Reinforced 14-gauge furniture steel formed panels. Apply sound-deadening mastic to exterior. Provide concealed ventilation cutouts.

2. Canopy: Reinforced 12-gauge furniture steel formed panels with lockable, contacted, hinged emergency exit. Interior finish white color reflective baked enamel.

3. Front Return Panels and Integral Entrance Columns: Reinforced 14-gauge furniture steel clad with minimum 16 gauge satin finish stainless steel. Swing entire unit on substantial pivot points (minimum three) for service access to car operating panel(s). Locate pivot points to provide full swing of front return panel without interference with side wall finish or handrail. Secure in closed position with concealed three-point latch. Provide firefighters' and service compartments with recessed flush cover and cutouts for operating switches, and similar items.

4. Transom: Reinforced 14-gauge furniture stainless steel clad with minimum 16 gauge satin finish stainless steel full width of enclosure.

5. Car Door Panels: Reinforced minimum 16-gauge furniture steel clad with minimum 18 gauge satin finish stainless steel. Same construction as hoistway door panels. Base: Baked enamel.

6. Interior Wall Finish: Removable panels, faced and edged, with color core plastic laminate, color and finish as selected by Architect.

7. Ventilation: Morrison Products, Inc. three-speed model SOE No. 06-01055 exhaust blower mounted to car canopy on isolated rubber grommets. Exhaust blower shall meet noise and vibration criteria. Lighting: Provide direct incandescent fixtures with wiring and hookup. Coordinate with emergency lighting requirements

8. Suspended Ceiling: Six-section satin finish stainless steel panels with lighting cutouts in each panel.

9. Handrails: Minimum 1-¼ in. diameter stainless steel tubular grab bar with backing plates and captive nuts across rear wall. Bolt rails through car walls from back and mount on 1-½ in. deep solid round stainless steel standoff spacers no more than 18 in. O.C. Return handrail/guardrail ends to car walls.

10. Pads and Buttons, Car P1 Three-piece removable pads. Two pads covering side walls and adjacent front returns and one covering rear wall. Provide cutouts to access main car operating panel.

2.09 HALL CONTROL STATIONS

A. Pushbuttons: Provide flush mounted faceplates. Include pushbuttons for each direction of travel which illuminate to indicate call registration. Include approved engraved message and pictorial representation prohibiting use of elevator during fire or other emergency as part of faceplate. Pushbutton design shall match car operating panel pushbuttons. Provide vandal resistant pushbutton and light assemblies. Include approved engraved message and pictorial representation prohibiting use of elevator during fire or other emergency as part of faceplate.

2.10 SIGNALS

A. Hall Position Indicator: Provide at lobby entrance to indicate travel direction of arriving car. Locate as detailed on architectural drawings. Illuminate up or down LED lights and sound tone once for up and twice for down direction prior to car arrival at floor. Sound level shall be adjustable from 20-80 dBA measured at 5 ft. in front of hall control station and 3 ft. off floor. Illuminate light until the car doors start to close. Provide advanced hall lantern notification to comply with ADA hall call notification time. Car direction lenses shall be arrow shaped with faceplates. Lenses shall be minimum 2-½ in. in their smallest dimension. Provide vandal resistant lantern and light assemblies consisting of series of dots or lines for maximum visibility.

B. Car Direction Lantern
Provide flush-mounted car lantern in all car entrance columns.
Illuminate up or down LED lights and sound tone once for up and twice for down direction
Sound level shall be adjustable from 20-80 dBA measured at 5 ft. in front of hall control station and 3 ft. off floor.
Car direction lenses shall be arrow shaped with or without faceplates.
Provide vandal resistant lantern and light assemblies consisting of series of dots or lines for maximum visibility.

C. Car Position Indicator: Alpha-numeric digital indicator containing floor designations and direction arrows a minimum of 1/2 in. high to indicate floor served and direction of car travel. Locate fixture in each car operating panel. When a car leaves or passes a floor, illuminate indication representing position of car in hoistway. Illuminate proper direction arrow to indicate direction of travel.

D. Alpha-numeric digital indicator containing floor designations and direction arrows a minimum of ½ in. high to indicate floor served and direction of car travel. Mount integral with hall lanterns at main floor. Provide vandal resistant indicator and light assemblies.

E. Faceplate Material and Finish: Satin stainless steel all fixtures.

F. Floor Passing Tone: Provide an audible tone of no less than 20 decibels and frequency of no higher than 1500 Hz, to sound as the car passes or stops at a floor served.

PART 3 EXECUTION

3.01 EXAMINATION

A. Field measure and examine substrates, supports, and other conditions under which elevator work is to be performed.

B. Do not proceed with work until unsatisfactory conditions are corrected.

C. Prior to start of Work, verify hoistway is in accordance with shop drawings. Dimensional tolerance of hoistway from shop drawings: -0 inches +2 inches. Do not begin work of this section until dimensions are within tolerances.

D. Prior to start of Work, verify projections greater than 2 inches (4 inches if ASME A17.1/CSA B44 2000 applies) must be beveled not less than 75 degrees from horizontal.

E. Prior to start of Work, verify landings have been prepared for entrance sill installation. Traditional sill angle or concrete sill support shall not be required.

F. Prior to start of Work, verify elevator pit has been constructed in accordance with requirements, is dry and reinforced to sustain vertical forces, as indicated in approved submittal. Verify that sumps or sump pumps located within pit shall not interfere with installed elevator equipment.

G. Prior to start of Work, verify control space has been constructed in accordance with requirements, with access coordinated with elevator shop drawings, including sleeves and penetrations.

H. Verify installation of GFCI protected 20-amp in pit and adjacent to each signal control cabinet in control space.

3.02 PREPARATION

A. Coordinate installation of anchors, bearing plates, brackets and other related accessories.

3.03 INSTALLATION

A. Install all equipment in accordance with Contractor's instructions, referenced codes, specification, and approved submittals.

B. Install machine room equipment with clearances in accordance with referenced codes and specification.

C. Install all equipment so it may be easily removed for maintenance and repair.

D. Install all equipment for ease of maintenance.

E. Install all equipment to afford maximum accessibility, safety, and continuity of operation.

F. Remove oil, grease, scale, and other foreign matter from the following equipment and apply one coat of field-applied machinery enamel.

1. All exposed equipment and metal work installed as part of this work which does not have architectural finish.

2. Neatly touch up damaged factory-painted surfaces with original paint color. Protect machine-finish surfaces against corrosion.

G. Interference with Other Work:

1. Guide rail brackets attached to steel shall be installed prior to application of fireproofing.

2. Coordinate construction of entrance walls with installation of door frames and sills. Maintain front wall opening until elevator equipment has been installed.

a. Ensure adequate support for entrance attachment points at all landings.

b. Coordinate wall openings for hall push buttons, signal fixtures and sleeves. Each elevator requires sleeves within the hoistway wall.

c. Coordinate emergency power transfer switch and power change pending signals required for termination at the primary elevator signal control cabinet in each group.

d. Coordinate interface of elevators and fire alarm system.

e. Coordinate interface of dedicated telephone line.

3.04 FIELD QUALITY CONTROL

A. Work at jobsite shall be checked during course of installation. Full cooperation with reviewing personnel is mandatory. Accomplish corrective work required prior to performing further installation.

B. Have Code Authority acceptance inspection performed and complete corrective work.

3.05 ADJUSTMENTS

A. Static balance car to equalize pressure of guide shoes/rollers on guide rails.

B. Lubricate all equipment in accordance with Contractor's instructions.

C. Adjust motors, controllers, leveling switches, limit switches, stopping switches, door operators, interlocks, and safety devices to achieve required performance levels.

3.06 CLEANUP

A. Keep work areas orderly and free from debris during progress of project. Remove packaging materials daily.

B. Clean machine room equipment and paint floor.

C. Clean hoistways, car, car enclosure, entrances, operating, and signal fixtures.

3.07 DEMONSTRATION

A. Prior to substantial completion, instruct Owner's Representative on the proper function and required daily maintenance of elevators. Instruct personnel on emergency procedures.

END OF SECTION
